EPA has delegated the management of those discharge permits to the State of Alaska Department of Environmental Conservation as directed by the CWA. In spite of that delegation, EPA remains actively involved in deciding issues that impact the ability of the state agency to accomplish its mission. For example, the EPA is currently considering a rule change that would dramatically impact the operation of seafood processing plants in those remote areas. That change could result in some of those operations having to cease processing because they cannot comply with this rule change. The current rule has been in place for almost 35 years and there is no water quality problem in the locations to justify such a rule change.

Will you commit to reviewing this proposal and confer with the Alaska Congressional Delegation prior to making any change to the current status?

If confirmed, I will review this proposal and confer with the Alaska Congressional Delegation prior to changing the Clean Water Act regulations currently applicable to seafood processors.

The Alaska Department of Environmental Conservation has recently issued a draft Clean Water Act APDES permit to allow seafood processors to continue discharging small amounts of waste pursuant to the Clean Water Act. Unfortunately, EPA is objecting to some of the permit conditions. Again, they are doing so with no known water quality issues or public concern about those conditions. Rather, it appears as though the EPA does not approve of the manner in which our state agency is pursuing its obligations. As a former State of Alaska Department of Natural Resources Commissioner, I have great faith in the ability of state employees to make solid permitting decisions that will protect the state's environment while allowing operations and employment to continue that are compliant with the Clean Water Act.

AMERICAN OVERSIGHT

2. Will you commit to reviewing these EPA actions and allow the state to issue its permit?

Yes, if confirmed, I will review EPA's actions as they relate to Alaska seafood processing permits. As I stated in my testimony, I support national standards and neighborhood solutions.

3. CERCLA Financial Assurance Requirements under Section 108(b):

On December 1, 2016 the Environmental Protection Agency issued a proposed rule under Section 108(b) of the Comprehensive Environmental Response, Compensation and Liability Act that would require hard rock mines to obtain additional and duplicate financial assurance requirements for copper, gold, iron, zinc and other hard rock mines. If this proposed rule is finalized, the financial assurance requirements would likely result in significant redundant costs for mining corporations. EPA has indicated that these regulations will expand to the oil and gas sector next. If confirmed would you work to ensure that any new rules or regulations are not duplicative of rules imposed by other federal agencies or states?

I am not familiar with the details of this rulemaking action and would not want to prejudge the issue prior to being confirmed as Administrator. However, if confirmed I will work to ensure EPA complies with all applicable legal requirements, including those related to analyzing impacts on small businesses, as part of this or any other rulemaking.

4. Section 404(c) of the Clean Water Act:

Do you believe that EPA's use of a preemptive veto of a project under section 404(c) of the Clean Water Act may create the opportunity for overreach by the agency and could undermine administrative process and the rule of law?

As I stated in my testimony, I believe that it is very important that federal agencies follow the appropriate legal process when taking any actions. Any preemptive action before the completion of a statutorily mandated process could undermine both the administrative process and the rule of law.

AMERICAN OVERSIGHT

Senator Whitehouse:

1.Estuaries are important coastal habitats the sustain unique wildlife and plant species, serve as a nurseries for commercially important fish, buffer coastal communities from coastal storms, and filter water as it flows into the ocean. The EPA manages a network of 28 estuaries of national significance around the country. Last Congress, the National Estuary Program (NEP) was reauthorized through 2021 (Public Law No.114-162) in a bipartisan effort and charged with providing grants to support projects that address a number of problems facing estuarine and coastal environments, including seagrass habitat loss, harmful algal blooms, invasive species, and sea level rise. Coming from a non-coastal state, please describe in detail how you will acquaint yourself with 1) the NEP, and 2) coastal issues the NEP helps address.

If confirmed, I would expect to be briefed by EPA staff on the relevant statutory authority and any EPA programs established pursuant to this authority.

2. Each NEP must institute a Comprehensive Conservation and Management Plan (CCMP) to guide management and conservation decisions at the NEP. The effects of climate change on estuaries (i.e., saltwater inundation, increased rainfall-driven runoff, warming waters) are included in these CCMPs. Would you direct the NEPs to disregard the consequences of climate change in the CCMPs and other decision-making reports and tools?

If confirmed, I would expect to be briefed by EPA staff on the relevant statutory authority and any EPA programs established pursuant to this authority. If confirmed, I will follow all as enacted by Congress.

3. The Climate Ready Estuaries program coordinates with the NEP to educate managers on how to assess the effects of climate change on U.S. estuaries. It also provides recommendations and toolkits to help design climate change adaptation and risk identification capabilities. Will you direct the Climate Ready Estuaries program to remove any materials, cancel any webinars or presentations, or stop its coordinated work on climate change with the NEPs?

I am not familiar with the details of the specific program referenced in your question. If confirmed, I would expect to be briefed by EPA staff on the relevant statutory authority and any EPA programs established pursuant to this authority.

4.Marine debris is a growing problem around the world, with plastic debris being the most troublesome component due to its pervasiveness and persistence in the marine environment. The EPA is currently a co-chair of the federal Interagency Marine Debris Coordinating Committee. Under your direction, will the EPA to maintain a leadership role on the committee? How will you continue EPA's

AMERICAN OVERSIGHT

coordinated work with NOAA and other agencies to prevent marine debris, conduct education outreach, and support research efforts?

I am not familiar with the details of the specific program referenced in your question. If confirmed, I would expect to be briefed by EPA staff on the relevant statutory authority to better understand EPA's role compared to those of other federal agencies on this issue.

5. EPA completed a State of the Science White Paper in December entitled "A Summary of Literature on the Chemical Toxicity of Plastics Pollution to Aquatic Life and Aquatic-Dependent Wildlife." The white paper identified four key areas where additional research is needed: 1) "the fate of chemicals both sorbed to and in plastics under differing environment conditions and within an organism after ingestion;" 2) "the relative role plastics play in chemical contaminant transfer to the tissues of organisms compared to other exposure pathways (aqueous dermal exposure and ingestion from natural prey);" 3) "the relative impacts of physical and chemical effects of ingested plastic particles on a wide range of organisms;" and 4) "whether the relatively high surface area of nanoplastics compared to microplastics and their potential to permeate membranes with increased retention time may increase their toxicological risk to organisms." What is EPA's role and responsibility in finding answers to these research questions?

I am not familiar with the report referenced in this question. If confirmed as Administrator, I would expect to be brief by staff to learn more about EPA's authorities and responsibilities before taking any actions referenced in the question.

6. Do you accept the science of ocean acidification that has directly connected the increase in human-caused carbon dioxide emissions with decreases in ocean pH?

First, I would note that the oceans are alkaline and are projected to remain so. Second, it is my understanding that the degree of alkalinity in the ocean is highly variable and therefore it is difficult to attribute that variability to any single cause.

7. Do you accept that the oceans are currently acidifying at a rate unprecedented in tens of millions of years?

First, I would note that the oceans are alkaline and are projected to remain so. Second, it is my understanding that the degree of alkalinity in the ocean is highly variable and therefore it is difficult to attribute that variability to any single cause. I am unaware of tens of millions of years of data on the pH of oceans.

AMERICAN OVERSIGHT

8.Do you accept ocean acidification's predicted toll on coral reefs worldwide, important habitats for recreation, tourism, and commercial fishing?

I am aware that there is a relationship between the alkalinity of water and the calcification process that grows shells and reefs and that a decrease in alkalinity can impair that process.

9.What is the EPA's role in helping states and coastal communities mitigate or adapt to the challenges projected for the shellfish industries or the thousands of individuals that make their living off of this billion-dollar resource?

If confirmed, I will implement the laws that EPA is charged to administer. Under section 304 of the CWA EPA establishes water quality criteria to protect aquatic life, including shellfish. Certain EPA programs also include authorities that can support projects that may benefit the shellfish industry, including the National Estuary Program under section 320 of the CWA, the Long Island Sound programs under section 119 of the CWA, and the Chesapeake Bay program under section 117 of the CWA. Finally, section 319 of the CWA can support programs and projects to reduce runoff that may impact oyster beds.

10.What do you understand to be the consequences of sea level rise, increased storm surge, and warming ocean waters on coastal communities and estuaries?

If confirmed, I would expect to be briefed by staff on the impact sea level rise, storm surge, and warming ocean waters on consequences on coastal communities and estuaries.

11.Both states and some Members of Congress have for years criticized EPA for "one-size-fits-all approaches" and failing to give adequate flexibility to states. Yet in challenging EPA's Clean Power Plan, you attacked EPA for just that – giving states and regions too much latitude in administering the Clean Air Act. Wouldn't that take the Agency in the wrong direction?

I, along with the Supreme Court, which issued a stay against the Clean Power Plan in February 2016, believe the EPA exceeded the bounds of authority established by Congress in the Clean Air Act. In particular, the Rule attempted to supplant decisions traditionally preserved for the states, including the establishment of intrastate energy policies, for agency mandated alternatives that would have increased the price of electricity for local citizens and reduced reliability. The notion of flexibility in the Clean Power Plan was conceptual at best. If confirmed, I will work to achieve the objectives of EPA-administered laws consistent with the process and framework established by Congress abiding by the bedrock principle of cooperative federalism, which relies on meaningful collaboration between the EPA and the states to achieve important environmental objectives.

AMERICAN OVERSIGHT

12.According to the EPA, it has been estimated that the Clean Air Act has a history of reducing air pollution, while creating jobs. Since 1970 aggregate emissions of common air pollutants dropped 72 percent, while the U.S. gross domestic product grew 219 percent. Total private sector jobs increased by 101 percent over the same period. In 2020, EPA estimates that the standards will create the equivalent of over 104,000 new jobs including 17,000 new jobs building renewable energy facilities and over 78,000 jobs in improving demand-side energy efficiency. Do you agree that regulations under the Clean Air Act since 1970 have grown the economy? If not, can you provide your analysis, materials used, and people you solicited to come to this conclusion?

The success of the Clean Air Act is a direct result of the important partnership between the EPA and the states in developing and implementing its key programs. State regulators best understand the needs and uniqueness of local environmental challenges while the EPA is well positioned to set and adjust environmental safeguards that continue to improve the nation's air, land and water and protect public welfare. If confirmed as Administrator, I will adhere to the clear directives and process set out by Congress so that the agency can once again focus on fulfilling its core mission.

13.In 2014, four Republican former EPA Administrators – Bill Reilly, Bill Ruckelshaus, Lee Thomas, Governor Christine Todd Whitman – testified before EPW that climate change is real, EPA regulations do not end up costing as much as industry initially estimates, and EPA has clear authority under the Clean Air Act to curb carbon pollution. In a 2015 interview with Climate Progress, Governor Whitman said: "The idea the EPA is a job killer is false" and with regard to the Clean Power Plan "what EPA did was to allow as much flexibility as frankly I've ever seen them be able to create in a regulation."
Do you think that the former Administrators are correct in their assessment that regulations do not cost as much as industry initially estimates? If not, can you explain why not?

I am not sure what specific regulations the former EPA Administrators were referring to and accordingly lack sufficient information to answer the specific question. Generally speaking, if confirmed, I will work to ensure that EPA regulatory actions accurately account for the costs and benefits across all impacted stakeholders.

14.Carbon Capture Utilization and Storage is a bipartisan policy area that I am working on with my Republican colleagues. Senator Graham and I visited the world's first Carbon Capture project in Canada that has been operational since 2014. In 2016, SaskPower successfully captured and injected 800,000 metric tons of carbon dioxide and the facility has operated nearly 85 percent of the time. Recently, Petra Nova in Texas became the first United States first post-

AMERICAN OVERSIGHT

combustion carbon capture project to begin operation. SaskPower and Petra Nova are listed in the Clean Power Plan as viable options for helping states reach their Clean Power Plan targets. Do you believe that CCUS is a viable technology for reducing emissions from power plants?

I believe CCUS technology can play an important role in the development of our future coal fleet, however it is not yet a viable option. Both the SaskPower and Petra Nova plants referenced in your question relied on significant support from their respective governments to become operational. Forcing private businesses to use unproven, expensive technology would be unfair, which is why Congress provided for protections against the EPA embracing such a practice in the Energy Policy Act of 2005.

15.In Rhode Island we have BioProcess H2O in Portsmouth and Agcore Technologies, LLC in Cranston that do carbon utilization—the conversion of carbon dioxide into useable products and fuels. These technologies not only capture carbon pollution, but can ease the demand of over-fishing by offering an alternative source of oils and protein. The carbon pollution from the algae production is creating and delivering algae-derived fish and animal feed. These utilization technologies are available now and are reducing carbon emissions. We also have retrofitted coal facilities using CCUS (SaskPower and Petra Nova). Do you believe that CCUS should be pursued as an emission reduction technology for the power sector and industrial sector?

Congress established clear directives the Administrator must consider when setting new source performance standards under the Clean Air Act. These directives are not technology specific, but instead require the Administrator set standards based on the best system of emission reduction that is technically feasible, achievable, adequately demonstrated and considerate of costs. If confirmed, I will follow the Clean Air Act process respective of the framework set by Congress.

16.According to the U.S. Energy Information Administration, in 2014, Oklahoma ranked fourth in the nation in net electricity generation from wind, which provided nearly 17% of the state's net generation. The American Wind Energy Association also estimates that wind power saved electricity customers in Oklahoma more than $1.2 billion in 2013 and a study from the Oklahoma State University found that wind companies have paid close to $134 million in property taxes to the state since 2004, producing revenues for the state. Do you agree that wind energy has saved Oklahomans money and brought revenues to the state? Do you agree that wind energy is an important part of our future clean energy economy?

As I discussed at my nomination hearing, 17 percent of Oklahoma's electricity is generated from wind, and as a state, we have a heavy emphasis

AMERICAN OVERSIGHT

on renewables in addition to oil and gas. Wind energy can be part of successful, diverse, energy portfolio.

17.AWEA also found that the wind farms provided an additional $2.8 billion in societal benefits each year to Southwest Power and that the wind power helped save 3 billion in gallons of water in Oklahoma in 2013. The Windfall Coalition, a group created by Continental Resources Inc. founder and CEO Harold Hamm is trying to get rid of the Oklahoma's incentives for wind energy, as they believe it is a mature technology and doesn't need incentives. Do you support the Coalition's efforts?

The decision on how to address state tax incentives for Oklahoma lies with the State Legislature and, ultimately, the Governor.

18.According to the Wind Energy Association and Solar Energy Industries Association, in 2016 the United States had 400,000 wind and solar jobs–310,000 solar, 88,000 wind. In contrast, according to 2016 DOE Energy Employment Report, employment in oil and gas extraction was 388,000 and 53,000 in coal mining. The Energy Information Administration (EIA) just found that coal production continued to decline in 2016 down nearly 17% from 2015 production. Its Annual Energy Outlook in 2017 reports that declining cost of natural gas is still encouraging utilities to shift away from coal over the long-term. The change is expected under our existing policies regardless of the Clean Power Plan. Do you believe that dismantling the Clean Power Plan and cutting back on environmental regulations will bring back the coal industry? Specifically, will it bring back coal jobs and make coal the dominate source of electricity in the U.S. again?

I am unable to say whether United States utilities and electric cooperatives would or would not return to coal as a predominant portion of their fuel mix if the Clean Power Plan were revoked or other regulations were cut back. The federal Energy Information Administration projects that coal will be an important part of the American fuel mix for the foreseeable future.

19.The Clean Air Act requires the EPA to consult with an independent scientific body, the Clean Air Scientific Advisory Committee, on air quality standards. Congress has also directed EPA to establish and seek advice from an independent Science Advisory Board. Do you intend to deviate from the current appointment process for this advisory committee? Will you disclose professional and political affiliations and political contributions of members that you appoint to the committee? Do agree to maintain the existing structure of this committee and current rules that are in place for the decision making of this committee?

I understand and appreciate the important role of EPA's independent scientific bodies. I have no first-hand knowledge of the existing processes or rules of the advisory committees referenced in the question and, if

AMERICAN OVERSIGHT

confirmed, I expect to learn more about these committees and commit to follow applicable legal authorities.

20.Improved environmental quality and economic growth aren't mutually exclusive. Since 2009, the states participating in the Regional Greenhouse Gas Initiative (RGGI) have seen carbon pollution fall by 18% while their economies grew by 9.2%. Emissions in the other 41 states fell by 4% while their economies grew by 8.8%. Do you agree that RGGI has developed a successful model for growing our states' economies and cutting carbon pollution at the same time? Will you commit to maintaining funding levels for EPA grant programs that fund state level initiatives to reduce their emissions?

While the agreement between the states participating in RGGI appears to be successful, what works for the Northeast may not achieve the same success in, for example, the Southwest. If confirmed, I look forward to working with EPA's budget staff and program offices to develop a budget focused on protecting human health and the environment for all populations. I will work to ensure that the limited resources appropriated to EPA by Congress are managed wisely in pursuit of that important mission and in accordance with all applicable legal authorities.

21.EPA operates multiple networks to monitor compliance with the Clean Air Act's National Ambient Air Quality Standards and to track hazardous air pollutants regulated under the act. These networks include, among others, the State and Local Air Quality Monitoring Network, the National Air Monitoring Network (which targets areas of high population density with a variety of air pollution sources), Special Purpose Monitoring Stations (used for short-term studies and other purposes), Photochemical Assessment Monitoring Stations (used to measure pollutants that contribute to ground-level ozone, a harmful air pollutant), and the National Air Toxics Trends Stations. During our meeting you mentioned a desire to increase resources for the Office of Research and Development, specifically mentioning monitoring equipment in non-attainment areas. What is your vision for monitoring? Do you plan to increase funding at EPA for these important monitoring networks?

I agree that monitoring compliance with the National Ambient Air Quality Standards is important to EPA's mission because it provides EPA with concrete and policy relevant data concerning the attainment status of communities throughout the country. If I am confirmed as Administrator, I expect to assess the Agency's resource usage and regulatory priorities and increased funding for air monitoring will be an area where I will consider deploying additional resources.

22.Section 105 grants provide significant funding to states for implementing the Clean Air Act requirements. Beginning in FY 2017, EPA is proposing a new formula for how the 105 grants are distributed to each of the regional offices (and subsequently to the states). Region 1, where Rhode Island receives its funding from, will receive a smaller percentage of the total 105 funds under this revised

AMERICAN OVERSIGHT

formula. EPA is proposing an implementation approach that would limit regional losses to no more than 2.5% from each region's prior year amount. Region 1 will lose 2.5% for, at least, each of the next five fiscal years and possibly ten years, under this proposed approach. Will you commit to not implementing the new formula until and unless there is sufficient overall funding such that no Region will see reduced funding from the prior year's amount?

If I am confirmed as Administrator, I will consider this and other resource allocation issues and will use my best efforts to ensure that regional funds are allocated equitably.

23.The National Environmental Policy Act has been a bedrock of our nation's environmental laws, ensuring that the environmental and community impacts of major federal actions are properly understood, that alternatives are appropriately considered, and that the public has the opportunity to actively participate in the environmental review process. What is your view of NEPA and its associated regulations, and will you commit to ensuring that the law, including the processes it establishes to ensure meaningful public participation and informed decision making, is in no way weakened?

I understand the National Environmental Policy Act established the White House Council on Environmental Quality and generally a process for considering the environmental impacts of federal actions. If confirmed, I will faithfully execute all applicable laws as Administrator.

24. The EPA's Office of Civil Rights has a long history of failing to comply with the Civil Rights Act of 1964. To date, the office has never found a violation of Title VI, which prohibits recipients of federal funding from acting in discriminatory ways. It has also allowed complaints to linger for years without a response. What will you do to ensure compliance by the EPA with the Civil Rights Act and to improve the track record of the Office of Civil Rights?

If confirmed as Administrator, I would expect to be briefed by staff and review any recommendations by the Office of Inspector General before taking action on this issue.

25. EPA and States are co-implementers of many of our federal environmental laws and programs. We believe that the tools used to implement these programs should be updated, particularly at the State level, to ensure effective implementation. Are there approaches, systems, or tools that you have considered to improve these programs and investments you would like to make in improvements that would benefit both federal and state environmental programs?

As I testified in the hearing, I have pursued opportunities to address interstate environmental quality matters. One of the examples I have highlighted is the work that Arkansas Attorney General Dustin McDaniel and

AMERICAN OVERSIGHT

I took to address an enforceable water quality standard between Arkansas and Oklahoma. I have also discussed how Texas should be responsible when air quality issues affect Oklahoma and my experience with that. When negotiations among and between states breakdown EPA has a role to set environmental standards. However, that is should be a last course of action instead of the first. I believe environmental statutes are designed with states as a primary implementer. Environmental statutes envision that states have the delegated enforcement and primacy to implement and enforce environmental statutes. Only when that is not happening or when negotiations between and among states breakdown should EPA determine a dispute and only after attempting to assist states negotiate a local solution. I am fond of saying that we need national standards and neighborhood solutions. I think that should shape the work of the EPA.

26. Under Section 111(b) of the Clean Air Act ("CAA"), in 2012, EPA issued New Source Performance Standards (NSPS) to limit emissions of VOCs from new, reconstructed, and modified sources in the oil and gas industry and finalized the rule in August of 2015. EPA developed a regulatory impact analysis of the regulation that estimated that the final standards for new and modified methane sources will yield benefits of $690 million in 2025, which will outweigh estimated costs of $530 million in 2025. Do you disagree with EPA's regulatory analysis? If you do, can you specify what information and analytics you use to justify your position?

I am familiar with the rule and understand that regulatory impact analyses play an important role in the EPA's rulemaking process. I also understand certain statutes, executive orders, and federal guidance documents inform the development of regulatory impact analyses. If confirmed, I commit to work with EPA staff to ensure regulatory impact analyses follow the relevant legal authorities.

27.In 2009, as mandated by the Supreme Court and backed by a robust scientific and technical review, the Environmental Protection Agency produced the Endangerment and Cause or Contribute Findings for Greenhouse Gases (GHGs) under Section 202(a) of the Clean Air Act. It found six greenhouse gases - carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride - "taken in combination endanger both the public health and the public welfare of current and future generations." You challenged the endangerment finding in court and lost. Do you agree with the EPA's finding? Do you commit to not take any steps as Administrator to narrow the scope or otherwise weaken this finding?

If confirmed, I will fulfill the duties of the Administrator consistent with Massachusetts v. EPA and the agency's Endangerment Finding on Greenhouse Gases respective of the relative statutory framework established by Congress. To my knowledge, there is nothing currently

AMERICAN OVERSIGHT

pending before the EPA that would require I take any additional actions on the Endangerment Finding and if there were, it would not be wise to prejudge the outcome.

28.There appears to be clear benefit from the regulation of methane emissions from the oil and gas sector. Can you discuss your views on the techniques used in the regulatory impact analysis for the NSPS for new oil and gas wells to quantify the cost and benefits of the regulation? Do you commit to maintaining the same metrics like emissions reductions, monetized climate benefits and health co-benefits, economic effects, employment benefits when designing new rulemakings?

I am familiar with the role and understand that regulatory impact analyses play an important role in the EPA's rulemaking process. I also understand certain statutes, executive orders, and federal guidance documents inform the development of regulatory impact analyses. If confirmed, I commit to work with EPA staff to ensure regulatory impact analyses follow relevant legal authorities.

29.The regulatory impact analysis for the methane emissions estimates that the rule could also reduce 210,000 short tons of ozone-forming VOCs in 2025, along with 3,900 tons of air toxics, such as benzene, toluene, ethylbenzene and xylene. Industry frequently talks about the costs to polluters of meeting public health standards while ignoring the costs to people harmed by the effects of pollution like the formation of ozone. Do you believe EPA should look at only the costs to the polluters when undertaking its regulatory impact analysis? Should the costs to families, such as children sent to emergency rooms due to asthma attacks triggered by smog, be included in the analysis? If so, should those costs be given a different weight than those claimed by industry?

I am familiar with the rule and understand that regulatory impact analyses play an important role in the EPA's rulemaking process. I also understand certain statutes, executive orders, and federal guidance documents inform the development of regulatory impact analyses. If confirmed, I commit to work with EPA staff to ensure regulatory impact analyses follow relevant legal authorities.

30.As you know, methane emissions from industry are as much as 90% higher than EPA had initially estimated, as has been demonstrated by academic peer-reviewed studies. New information is currently being sent to EPA, as part of the Information Collection Request (ICR), on methane emissions from existing sources. How do you plan to use the information collected? How do you plan to lead the agency in addressing this significant spike in known methane emissions?

Section 114 of the CAA provides the Administrator of the EPA to collect emissions data from existing sources. If confirmed, I will review the ICR

AMERICAN OVERSIGHT

currently underway regarding methane emissions and examine the submitted data to determine the appropriate next steps.

31.You have been quoted previously, "my concern is that EPA is employing its flawed methodology in order to rationalize new and unjustified federal regulations to solve a methane-emissions problem that simply does not exist." Science has shown us that methane's effect on climate change is up to 34 times greater than that of CO2 when averaged over a 100-year time period and even greater when considered over the first 20 years after it is emitted. Additionally, a recent Geophysical Research Letter article found that the U.S. could be responsible for the 30% to 60% increase in atmospheric methane emissions since 2002. Can you clarify what you mean that a methane-emissions problem does not exist? Do you refute the argument that human's development of oil and gas has led to more methane emissions? The U.S., Canada, and Mexico have all pledged to work together in reducing methane emissions from the oil and gas sector between 40% to 45% by 2025. If you are confirmed as Administrator, do you intend to work with the State Department to honor our international methane commitments?

It is my understanding that even EPA's revised methane data shows a decrease in methane emissions from oil and natural gas development since 2005, during a time period of a large increase in domestic energy development. EPA's data is based on a number of assumptions that, if confirmed, I will review carefully prior to making any prejudgments of future actions.

32.The State Department and others have assessed life-cycle emissions for various crude oils and found tar sands crude is one of the dirtiest crudes on the planet from a GHG perspective. Do you agree tar sands crude has significantly higher life-cycle emissions than Oklahoma Sweet and most other crude oils?

The lifetime emissions of any energy source should be considered in the context of necessary extraction techniques as well as transportation of the fuel, among other issues. For example, transporting crude via pipeline clearly creates fewer emissions than transporting it via other sources in terms of fossil fuel energy. Without knowing the specifics of all of these factors in a given instance, it is difficult to identify which sources may result in greater emissions.

33.The State Department conducted a comprehensive economic and environmental analysis of the project and determined that under the current market conditions and those projected for the next few years, Keystone XL is key to getting tar sands crude to market. The EPA agreed with this conclusion. Do you agree? If not, why?

AMERICAN OVERSIGHT

I am not familiar with the State Department study but with over 2.4 million miles of pipeline in the United States as well as other transportation methods for moving goods and energy resources it is my understanding that oil sands development has continued despite the lack of approval for the Keystone XL's cross-border permit.

34.Many of Keystone XL's proponents suggested that rejecting the project would simply divert more tar sands to rail to the Gulf Coast. Were you aware that according to the Energy Information Administration, shipments of Canadian crude by rail to the Gulf Coast have declined since Keystone XL was rejected, from 64,000 barrels per day in 2015 to 45,000 barrels per day in 2016?

I am not familiar with that particular EIA data.

35.The State Department found that the emissions associated with the production, refining and combustion of the tar sands in Keystone XL would result in 147 to 168 million metric tons (MMT) CO2e per year (equivalent to the emissions from as many as 35.5 million cars). The State Department also found that by displacing conventional crude with dirtier tar sands, the project would result in 1.3 - 27.4 MMT CO2e of additional emissions (equivalent to the emissions from as many as 5.7 million cars). Do you agree? If you disagree, please identify any research studies or experts you have consulted to form your opinion.

I am familiar with multiple State Department determinations that the Keystone XL pipeline would not significantly impact climate change.

36.In a recent study, the National Academy of Sciences (NAS) concluded that diluted bitumen—the type of crude that would be primarily transported by Keystone XL—has a series of properties that, taken together, make tar sands spills of greater concern for spill responders than spills of other, commonly transported crude oils. Both EPA and the Coast Guard advised the scientists on the NAS committee. Do you agree with their conclusion that tar sands spills pose greater risks and challenges for spill responders than other crude oil spills? If you disagree, please identify any research studies or experts you have consulted to form your opinion.

Diluted bitumen has been transported safely by pipeline in the United States for more than 40 years. It is my understanding that he NAS report did not infer that the Keystone XL pipeline posed significant concerns or that diluted bitumen could not be safely transported via pipelines or other forms of transportation.

37.The NAS committee also found that there are no known, effective strategies for recovering tar sands bitumen than has been spilled in a waterbody and sunk. Do

AMERICAN OVERSIGHT

you agree? If you disagree, please identify any research studies or experts you have consulted to form your opinion.

I have no information in supporting or challenging this assertion.

38. The NAS committee also found that regulations and agency practices do not take the unique properties of diluted bitumen tar sands into account, nor do they encourage effective planning for spills of diluted bitumen. Do you agree? If you disagree, please identify any research studies or experts you have consulted to form your opinion.

EPA is not the primary regulator of pipelines, this question would more appropriately be posed to the Pipeline and Hazardous Materials Safety Administration.

39.The State Department's EIS found that Keystone XL's leak detection system is unlikely to identify leaks smaller than half a million gallons a day. Given the increased risks of tar sands spills and Keystone XL's proposed route through the Ogallala aquifer, should the EPA play an active role in ensuring that the water our nation's ranchers and farmers rely on is protected?

EPA should play an active role in ensuring protection of our domestic water supply.

40.The Environmental Protection Agency (EPA) has raised concerns regarding the effect that Keystone XL and the tar sands it carries will have on the air quality of Gulf Coast refinery communities. Do you believe that the EPA should take a role to ensure that projects like Keystone XL do not put our communities at risk of asthma, cancer and other serious illnesses?

I am aware that EPA has a role in implementing the National Environmental Policy Act, and other statutory responsibilities as it relates to infrastructure projects like pipelines. If confirmed as Administrator, I will work to faithfully execute the laws EPA is responsible for administering in order to protect human health and the environment for all Americans.

41. Do you believe that Native Americans, landowners, farmers, ranchers and communities affected by projects like Keystone XL should have the opportunity to have their concerns considered and address as part of an environmental review process?

Yes.

AMERICAN OVERSIGHT

42.Based on the climate change implications, spill potential, and other factors, the Obama Administration determined Keystone XL isn't in our nation's best interest. Do you agree? If not, why?

While the Obama Administration failed to grant the cross-border permit required to complete the Keystone XL pipeline, much of the pipeline was built in accordance with applicable laws and permits both federal and state. A large portion of the Keystone XL pipeline safely operates through Oklahoma and I believe that safely and efficiently moving natural resources through the country is very important.

43.If confirmed, do you commit to ensuring EPA fully considers and articulates the environmental implications, based on the best-available science and in accordance with EPA's authority under the National Environmental Policy Act, when determining how to proceed on the Keystone XL Pipeline and any other projects?

If confirmed, I will faithfully execute all applicable laws as Administrator.

44.According to EPA 49% of coal units lack the most advanced NOx controls (Selective Catalytic Reduction systems or SCR). Several units that have SCR or other NOx emission control technology installed are not optimizing their use. For example, these six coal units have SCR installed but are not using it to optimize NOx reductions. In 2015, these facilities' NOx emissions were significantly higher than 2009 because they are not using the systems they have in place to reduce NOx. EPA estimates it costs facilities $500/ton NOx pollution to optimize the reduction of NOx from an SCR and $1300/ton to restart a SCR unit. Do you think these facilities should be regulated to keep on their NOx controls on?

If I am confirmed as Administrator, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act. That includes evaluating your concerns regarding the use of post-combustion NOx controls if and when they are presented to me in a matter before the Agency.

45.Industry frequently talks about the costs to polluters of meeting public health standards while ignoring the costs to people harmed by the effects of pollution. In Rhode Island these effects cannot be ignored as we seen them through rising seas and bad air days for Rhode Islanders. Because Rhode Island ozone air quality issues are largely due to transported emissions from upwind states leading to ozone formation that pollutes the air and lungs of people in downwind states like mine. Over the past two years in Rhode Island, the 8-hour standard ozone standard exceeded 0.07 ppm 10 times in 2015 and 6 times in 2016. With respect

AMERICAN OVERSIGHT

to ozone, do you believe EPA should look at only the costs to the polluters when undertaking its regulatory impact analysis? Should the costs to families, such as children sent to emergency rooms due to asthma attacks triggered by smog, be included in the analysis? If so, should those costs be given a different weight than those claimed by industry?

Under the Clean Air Act, while setting NAAQS for criteria pollutants, cost cannot be considered. This is because human health is the primary focus of these standards. EPA's regulatory impact analyses have typically addressed what you describe as "costs to families" in the benefits portion of the analysis (i.e., the value of public health and environmental effects avoided).

46.EPA's independent science advisers, leading medical groups like the American Medical Association, American Academy of Pediatrics, American Thoracic Society, American Lung Association, American Heart Association, and leading public-interest groups such as the NAACP called for a 60 ppb standard instead of the 70 ppb standard EPA finalized last year. What was your scientific basis for concluding that the old standard, 75 ppb, was sufficient to protect public health? Can you explain what sources you consulted? What groups you discussed this with?

Due to a number of factors and steps taken by the previous Administration, implementation of the 2008 ozone NAAQS did not begin until years later. States had only recently begun to implement the 75ppb standard for ground-level ozone when EPA changed it; considering that approximately 40 percent of the country was in nonattainment for the 2008 standard, I believe EPA should focus on helping those areas meet that standard. Oklahoma's challenge to the most recent ozone NAAQS was based, in part, on concerns that EPA has not adequately assessed the available science. It is EPA's obligation to properly justify any change to an existing NAAQS.

47.Rhode Island ozone air quality issues are largely due to transported emissions from upwind states leading to ozone formation that pollutes the air and lungs of people in downwind states like mine. The Rhode Island Department of Environmental Management told me that there remain a number of power plants located in upwind states that have pollution control equipment installed to reduce nitrogen oxides emissions that either do not use that equipment during the ozone season or do not use it in a way that optimizes the reduction of nitrogen oxides emissions. Why would this be the case?

I am unfamiliar with the specifics as to why certain sources upwind of Rhode Island may not be using control devices in particular ways. CSAPR and related rules are designed to address emissions from upwind states

AMERICAN OVERSIGHT

that significantly contribute to nonattainment in downwind states. EPA presumably considered emissions from the upwind power plants referenced in your question in formulating the existing requirements.

48.Each year, RIDEM issues “ozone alerts” to warn vulnerable Rhode Islanders to stay indoors to protect their health on hot days when air quality is poor. This is a problem that cannot be solved in the state because masses of polluted air are coming from upwind. The health of Rhode Island citizens depends on a strong federal EPA program to impose pollution controls on NOx, particulates, and other mobile and stationary sources of pollution. What will you do to support the federal air quality programs? Will you commit to keep existing funding levels for the clean air programs that impose and regulate pollution controls and protect Rhode Islanders?

If confirmed, I will work to administer the statute and applicable federal programs in accordance with Congressional intent. I look forward to working with EPA's budget staff and program offices to develop a budget focused on fulfilling EPA's mission to protect human health and the environment for all populations. I will work to ensure that the resources appropriated to EPA by Congress are managed wisely in pursuit of the Agency's important mission and in accordance with all applicable legal authorities.

49.Ozone levels in RI are strongly affected by the transport of pollutants emitted in upwind states into RI. Although RI is currently designated as an unclassifiable/attainment area for the ozone NAAQS, monitored ozone levels in the State still exceed the standard on a number of days in the summer months. The Ozone Transport Region (OTR) states, including RI, have implemented a number of programs to reduce pollutant emissions from mobile and stationary sources in their states, as required by the Clean Air Act (CAA). RI and other OTR states were required by the CAA to implement emissions control programs not mandated in upwind states, resulting in increased energy costs and an inequitable economic burden to industry in the OTR states. Any additional emissions reduction programs that could be adopted in the OTR to further reduce ozone levels in the region would be less cost-effective than implementing OTR controls in upwind states and would further this inequity. What steps will you take to address the transport of pollutants emitted in upwind states that contribute to exceedances of the ozone standard in RI and other OTR states?

Interstate transport of pollutants is a concern. An upwind state that contributes to a downwind state's inability to meet air quality standards should take responsibility. It is EPA's responsibility to address such issues, and, if confirmed, I look forward to working on this issue.

AMERICAN OVERSIGHT

50.The intent of the establishment of the RFS in the Energy Policy Act was to enhance U.S. energy security by displacing some imported petroleum with domestically produced ethanol. In your estimation, has the RFS reduced imports of foreign oil?

As Congress indicated in the Energy Independence and Security Act of 2007, domestic production of renewable fuel contributes to our nation's "greater energy independence and security."

51.President-elect Trump has said, “The RFS, which is Renewable Fuel Standard, is an important tool in the mission to achieve energy independence for the United States. I will do all that is in my power as president to achieve that goal….Energy independence is a requirement of America’s to become great again. My theme is “Make America Great Again”; it’s an important part of it.” Do you hold the same beliefs as President-elect Trump about the RFS? If not, can you be specific where your views differ on this policy?

As Congress indicated in the Energy Independence and Security Act of 2007, domestic production of renewable fuel contributes to our nation's "greater energy independence and security." To that end, if confirmed, I will work to administer the RFS program in accordance with statute and Congressional intent.

52.Agriculture Secretary Tom Vilsack, who has been supportive of the RFS, made a statement in Bloomberg Markets, “There's going to be a lot of saber-rattling, but it supports too many jobs and too much rural infrastructure is set up for it. The Renewable Fuel Standard is solid.” Do you agree that the RFS has supported jobs . and helped develop our rural infrastructure?

Yes.

53.You have been quoted, “It should come as no surprise that I am working diligently with Oklahoma energy companies, the people of Oklahoma and the majority of attorneys general to fight the unlawful overreach of the EPA and other federal agencies.” Do you think that the renewable fuel standard is one of those unlawful overreach regulations from the EPA? Can you explain in more detail the type of overreach you are talking about when it comes to the EPA and other federal agencies?

The RFS was first enacted by Congress in 2005 and updated and expanded in 2007 to promote domestic production and achieve energy independence. Therefore, I do not consider it to be "one of those unlawful overreach regulations from the EPA." The EPA needs to better administer this program

AMERICAN OVERSIGHT

to provide involved entities with the certainty they need, and, if confirmed, i will administer the RFS in accordance with statute and Congressional intent.

54. You have been quoted in the press saying, "The American people are tired of seeing billions of dollars drained from our economy due to unnecessary EPA regulations, and I intend to run this agency in a way that fosters both responsible protection of the environment and freedom for American businesses." Do you see the RFS as one of those unnecessary EPA regulations that is draining money from our economy?

The RFS was first enacted by Congress in 2005 and updated and expanded in 2007 to promote domestic production and achieve energy independence. The EPA needs to better administer this program to provide involved entities with the certainty they need, and, if confirmed, I will administer the RFS in accordance with statute and Congressional intent.

55.The RFS has been a significant factor in growing the volumes of biodiesel and other advanced biofuels. In light of the uncertainty surrounding the Biodiesel Tax Credit and the increased volume of biodiesel imported from Argentina, do you intend to support the RFS and continue to increase the Renewable Volume Obligations (RVOs) that provide the long term market stability to support investment and increase the jobs available in a growing domestic industry? Do you commit to making all economic and pricing models used in developing the annual blending targets under the RFS available to the public? If you come across models that were used in the past that were left out of the public record, will you make those available? Do you intend to use EIA data in conjunction with your administration of the RFS? Are there other data sources that you intend to rely on?

If confirmed, I will administer the RFS in accordance with statute and Congressional intent. There has been significant investment that has gone into the infrastructure following the enactment of the RFS in 2005, and these individuals need certainty that the EPA has failed to provide in the past, from the trading program to monitoring the fraud in the system, to faith that the program will be enforced and administered as Congress intended. The Clean Air Act requires the Administrator of the EIA to submit annual projections of transportation fuel, biomass-based diesel, and cellulosic biofuel to be sold or introduced into commerce into the United States, and I will commit to continue relying on EIA data projections to set annual volume obligations.

56.It has been estimated that the RFS supports roughly 850,000 jobs across the country and many of those jobs rely on certainty from the EPA setting its volume

AMERICAN OVERSIGHT

requirements for the renewable fuels each year. If confirmed to serve as EPA Administrator, will you carry out the Energy Policy Act as passed in 2005 and updated in 2007, particularly adopting the statutory volume requirements for renewable fuels?

Section 211(0) of the Clean Air Act contains enumerated tables of applicable target volumes of renewable fuel for calendar years 2006 through 2022. If confirmed, I will work to administer the RFS program in accordance with statute and Congressional intent.

57.The RFS has driven investment in low carbon biofuels in our country. Are you committed to working to achieve the gains in advanced and cellulosic biofuels promised under the statue?

Section 211(0) of the Clean Air Act contains enumerated tables of applicable target volumes of renewable fuel, specifically cellulosic and advanced, for calendar years 2006 through 2022. If confirmed, I will work to administer this program in accordance with statute and Congressional intent.

58. Following the Sixth Circuit's stay of the Clean Water Rule in 2015 pending further court action, the EPA and Army Corps issued a joint memorandum that states the agencies 1) "look forward to vigorously defending the merits of the Clean Water Rule, which we continue to believe is fully consistent with the law and based on the best available peer-reviewed science," 2) "intend to move forward with measures to improve implementation of the national CWA section 404 program that were announced concurrent with the Rule," 3) will continue their commitment to improve transparency through making section 404 decisions public and making a number of other improvements to the section 404 permit program, 4) strengthen coordination between the agencies, and 5) "work closely with the Department of Justice to ensure [their] actions remain consistent with the stay." If confirmed as EPA Administrator, will you uphold the tenets of this memorandum? If not, what would you change in the EPA's pursuance of clean water and cooperative relationship with the Army Corps of Engineers? Will you commit to working collaboratively with the Army Corps under its corresponding section 404 and other Clean Water Act authorities to ensure clean water for all Americans? If confirmed as EPA Administrator, would you advise DOJ to stop defending the rule and instead ask the court to set aside the rule and send it back to the agencies for reconsideration? Do you disagree with the process the EPA used in developing the Clean Water Rule, which involved incorporating the best available science and feedback received through around 400 public meetings and over 1 million public comments?

If confirmed I will support efforts of the Corp to improve transparency through making section 404 decisions public and to strengthen

AMERICAN OVERSIGHT

coordination between the agencies. However, I do not support the WOTUS rule and do not believe that it is consistent with the Clean Water Act. Accordingly, if confirmed, I will take appropriate steps, in accordance with the Administrative Procedure Act, to withdraw the rule and replace it with a rule that is within the authority granted to EPA and the Corps under the Clean Water Act and is promulgated in compliance with the APA, the Regulatory Flexibility Act, the Small Business Regulatory Enforcement Fairness Act, the Unfunded Mandates Reform Act, Executive Order 13132 on Federalism, and Executive Order 12866 on regulatory planning and review, procedural requirements that I believe were not met in the promulgation of the WOTUS rule. If confirmed, I also would inform the appropriate courts of these actions.

59. In the wake of SWANCC, Rapanos, and other decisions, how would you shape regulations and internal EPA policy to provide more certainty for regulated parties on how the agency will make section 404 permitting decisions?

EPA does not make 404 permitting decisions. Section 404 of the Clean Water Act grants that authority to the Secretary of the Army, who carries it out acting through the Corps of Engineers. Under section 404(c) EPA has the authority to veto a Corps-issued permit if it EPA determines the discharge will have unacceptable adverse effects. If confirmed, I will seek to clarify when it is appropriate for EPA to use its 404 veto authority.

60.If you choose to pursue a renewed rulemaking to clarify "waters of the United States," will you follow the same procedure and commit to at least the same level of outreach the EPA undertook in developing the Clean Water Rule in developing a new rule?

If confirmed, I will ensure that the outreach performed by EPA is not only extensive, but meaningful.

61.Extreme weather events put water and wastewater infrastructure at risk. In Rhode Island, Super Storm Sandy almost caused Narragansett Bay to breach the water supply for the City of Newport. The March 2010, storms flooded the Pawtuxet River, overtopping the Warwick Wastewater Treatment facility and sending untreated wastewater into surrounding neighborhoods, the River and Narragansett Bay. What do you see as EPA's role in helping cities and towns respond to these increasingly frequent extreme weather events and ensure the safety of the nation's critical water and wastewater infrastructure?

AMERICAN OVERSIGHT

EPA provides water and wastewater infrastructure assistance through the Clean Water Act and Safe Drinking Water Act revolving loan funds and through the new WIFIA loan program.

62.What role can green infrastructure play in helping municipalities manage and prevent sewer overflows and other storm water and wastewater treatment concerns?

Green infrastructure is a neighborhood solution that can help meet national standards.

63.In making recommendations for revisions to state shares of Clean Water State Revolving Fund (CWSRF) money, do you support increasing allocations for states with the oldest infrastructure?

No. I am not aware of any analysis that suggests that age of infrastructure is an appropriate metric that predicts funding needs for wastewater infrastructure. It was not suggested in the May 2016 Report to Congress from EPA on its review of the CWSRF allotment formula, required by section 5005 of the Water Resources Reform and Development Act (WRRDA) of 2014. I also note that the formula is established by law and only Congress can change it.

64.Sea level in Newport, RI has risen over 10 inches since 1930, Rhode Island experiences significantly more rain and more intense storms than in past decades, and Superstorm Sandy and the Flood of 2010 destroyed roads and buildings. The RI Department of Environmental Management is finalizing an assessment of the vulnerability of each wastewater treatment facility in the state from damage due to flooding and storm surge. Will states have the ability to choose to use State Revolving Fund monies to finance resiliency projects under the next Administration? What restrictions, if any, would you foresee putting on the use of these funds for this purpose?

The eligibilities for the use of CWSRF funds are established in the Clean Water Act. If confirmed, I will manage that program as authorized by Congress.

65.States rely on EPA funding, technical assistance, and other resources to help keep the air, water, and soil clean, particularly through the State and Tribal Assistance Grants and Categorical Grants. State agencies like the RIDEM have delegated authority to carry out federal pollution control laws. Based on what you know about the EPA, do you believe states and tribes are getting enough money from the federal government to support clean air and clean water investments and

AMERICAN OVERSIGHT

enforcement? If confirmed, will you commit to ensuring states and tribes continue to receive at least the amounts of funding they do now? Are there programs that support states and tribes that you would consider cutting or increasing financial support for?

I support the federalism structure of our federal environmental laws, which includes state delegation or authorization of most programs, and EPA STAG grants to help states implement those programs. If confirmed, I will seek to reduce the workload on states by refraining from adding more and more requirements for them to implement and to instead allow them to focus on implementing core environmental programs relating to air, water, and waste. I am not familiar with the development of EPA's FY 2018 budget so I cannot comment on that proposal, but please be assured that I support funding for states.

66.A 2016 Associated Press study of EPA data identified Providence, RI as "one of the largest [drinking water systems] in the country to exceed a federal lead standard since 2013." Almost 20 percent of all retail customers' homes were found to be serviced by utility-owned lead lines. EPA's lead limit before corrective action is required is currently 15 parts per billion. The city's water supply was found to be over this limit six times since 2010. Providence's water hit 30 parts per billion in tests in 2009 and 2013. Providence has shown marked improvement since those peaks, but there is still millions of dollars of investment needed in the city's drinking water infrastructure to reduce the risk of lead. What role do you believe EPA should play supporting these investments?

I would urge the City to explore funding opportunities available from the new WIFIA loan program, which is implemented by EPA.

67.What have you done in your career to demonstrate lead contamination of drinking water will be a priority if you are confirmed as EPA Administrator? Please cite specific examples.

I am concerned about children's health, but the Oklahoma Department of Environmental Quality and the Oklahoma Water Resources Board have primary responsibility for implementing and enforcing environmental laws in Oklahoma, so issues relating to lead contamination of drinking water would fall within their responsibilities. If confirmed as Administrator, I will faithfully execute all environmental laws enacted by Congress, including the Safe Drinking Water Act.

68.In an interview with the Providence Journal last April, Rhode Island's chief of the Center for Drinking Water Quality at the RI Department of Health stated that "[i]n the last monitoring period, we had six small water systems exceed the lead action level. Five were school systems." These systems were brought back into

AMERICAN OVERSIGHT

compliance, but the concern remains. How will you prioritize lead abatement in schools and among the most vulnerable populations?

If confirmed, I will fully carry out EPA's authorities, including its authorities under the Safe Drinking Water Act. I note that in the WIIN Act, Congress amended the Safe Drinking Water Act to authorize funding for voluntary school lead testing. If confirmed and if funding is provided, I will carry out that program.

69.EPA's regulations on lead in drinking water, otherwise known as the Lead and Copper Rule, were last revised in 2007. In its October 2016 white paper on revising the rule, the EPA recognized "[t]here is a compelling need to modernize and strengthen implementation of the rule—to strengthen its public health protections and to clarify its implementation requirements to make it more effective and more readily enforceable." Do you agree the Rule is in need of updating to reflect the latest science?

Yes.

70.Do you believe all covered water systems should follow EPA's drinking water analytical methods when testing drinking water for contamination? If so, what efforts will you undertake to ensure all water systems are brought into compliance?

If confirmed, I will fully carry out EPA's authorities, including its authorities under the Safe Drinking Water Act. To achieve this, I will focus on EPA's core missions, such as provision of safe drinking water.

71.In a November 2016 interview with the New York Times, President-elect Trump specifically called out "crystal clear water" as a priority. Do you agree "crystal clear water" should be a priority of the EPA? If so, please list the specific steps you would take as Administrator to make the President-elect's vision a reality.

Yes, I agree that clean water is a priority of the EPA. If confirmed, I will ensure that EPA focuses on the core missions as directed under laws enacted by Congress, including clean water and safe drinking water.

72.Over 40,000 water bodies in the United States are considered "impaired" under Section 303(d) of the Clean Water Act, meaning they do not meet water quality and health standards. Six hundred and thirty-five of these are in Oklahoma. What specifics steps did you take as Attorney General and as a state legislator to improve the water quality in these impaired waters in Oklahoma?

AMERICAN OVERSIGHT

Regulation of water quality in Oklahoma is the responsibility of Oklahoma's environmental regulators at agencies like the Oklahoma Water Resources Board and Oklahoma Department of Environmental Quality. Those agencies would be best situated to describe the actions taken by Oklahoma to improve water quality in impaired waters.

73.What clean water initiatives undertaken by the EPA in the last five years do you support?

I support the Mach 2011 nutrient framework issued by the Assistant Administrator for the Office of Water entitled "Working in Partnership with States to Address Phosphorus and Nitrogen Pollution through Use of a Framework for State Nutrient Reductions," which prioritizes state action to encourage on the ground activities over establishment of numeric nutrient limits. I support EPA's May 2012 Integrated Municipal Stormwater and Wastewater Planning Framework, which directs EPA enforcement and permitting officials to allow municipalities to integrate multiple CWA responsibilities in a single plan and prioritize the actions with the greatest health and environmental benefits, and to allow extended compliance schedules to carry out that prioritization. I support EPA's efforts to promote green infrastructure to meet Clean Water Act requirements. Green infrastructure can be a neighborhood solution to meet national standards. I support the new Water Infrastructure Finance and Innovation Act loan program authorized by Congress in 2014 that recently received its first appropriations. The WIFIA program creates tremendous opportunities to increase water and wastewater infrastructure investment because every federal dollar appropriated can leverage as much as $60 in infrastructure investments.

74.How will you address EPA's National Pollutant Discharge Elimination System permitting backlog without undermining any environmental protections or subverting the goals of the Clean Water Act?

First, I would note that at the end of FY 2016, 96.9 percent of Oklahoma's permits were current. Making sure permits are current is one of core functions under the statutory responsibilities given to EPA and in turn carried out by authorized states. However, in recent years states have been asked to shift their focus and resources to other activities. If confirmed, I would return EPA's focus to ensuring that core functions under our environmental laws are carried out.

75.Factory farming of animals is known to cause multiple forms of pollution, such as contaminating local groundwater with nitrates, contributing to hypoxia and "dead zones" in rivers and coastal waters, and releasing the potent greenhouse

AMERICAN OVERSIGHT

gas methane. Considering your close ties with the animal agriculture industry in Oklahoma, your previous history of unsuccessfully prosecuting lawsuits against states with animal welfare laws, your opposition of EPA's attempt to conduct a survey of CAFOs, and your pursuit of punitive yet failed investigations of nonprofit advocacy groups working for animal welfare, do you believe you should recuse yourself from any decisions related to enforcing the CWA and CAA to the fullest extent of the law against these facilities? If not, will you commit to disclosing to the EPW Committee any solicitations you have made to interested parties before you make any decisions related to this topic? If not, what assurances can you provide that you will be able to discharge your duties in this area impartially?

If confirmed, I will faithfully execute the Clean Water Act and Clean Air Act as enacted by Congress. My track record with regard to CAFOs, which includes suing a CAFO together with EPA and collecting what EPA at the time said was the largest civil penalty ever assessed against a CAFO for CWA violations, demonstrates that I can, and will, approach such issues with a fair and open mind.

76.Explain your reasons for opposing EPA's 2012 attempt to conduct a survey of CAFOs. Has your thinking changed since then? Please explain why or why not.

For the purpose of this response, I am assuming that you are referring to EPA's 2011 proposed animal feeding operation reporting rule, published at 76 Fed. Reg. 65431 (October 21, 2011), and the January 19, 2012 comments on that proposed rule filed by 12 state attorneys general, including myself. This proposed rule is an example of an attempt to impose new regulatory requirements without complying with either the law or proper administrative process. Under the Clean Water Act, only facilities that discharge pollutants can be regulated. Despite this limitation on EPA's authority, it had twice before attempted to regulate non-discharging facilities. In 2005, the Second Circuit vacated parts of EPA's 2003 CAFO rule that purported to require non-discharging CAFOs to apply for permits. Waterkeeper Alliance, Inc. v. United States Environmental Protection Agency, 399 F. 3d 486. In 2011, the Fifth Circuit vacated the part of EPA's 2008 CAFO rule that would have required all CAFOs "proposing to discharge" to apply for NPDES permits regardless of whether they had actual discharges. National Pork Producers Council v. United States Environmental Protection Agency, 635 F. 3d 738 (5th Cir. 2011). Further, EPA's authority to require reporting (section 308 of the CWA) applies only to point sources that discharge. That was made clear by the 8th Circuit in Service Oil, Inc. v. Environmental Protection Agency, 590 F. 3d 545 (8th Cir. 2009). Despite the clear limitations of the Clean Water Act, in the CAFO reporting rule EPA proposed to require facilities that are not subject to the Clean Water Act to submit reports to EPA. As such, that proposed rule exceeded EPA's authority.

AMERICAN OVERSIGHT

77.According to the CDC, in 2014 Oklahoma reported the second highest rate of exposure to pesticides in the nation. At a time when pesticide/herbicide usage is on the rise across the country, how would you protect American workers, consumers, and landscapes from the toxic effects of agricultural chemicals?

I am not personally familiar with the data referenced in this question or generally the rate of pesticide usage in Oklahoma. If confirmed as Administrator, I would expect to be briefed by EPA staff before taking action on this issue and would work to ensure EPA followed all applicable legal requirements and made its decisions based on sound science in an open and transparent process.

78.Your close ties to the fossil fuel industry have given a strong appearance of pay-to-play politics favorable to that industry. As you well know, the agrichemical and seed biotechnology industry has a similar history of major lobbying, campaign financing, and maintaining close relationships with lawmakers and agency administrators. Monsanto, the Oklahoma Farm Bureau, and other agricultural interests contributed more than $90,000 to your previous campaigns. Do you believe you should recuse yourself from any decisions related to this industry? If not, will you commit to disclosing to the EPW Committee any solicitations you have made to interested parties before you make any decisions related to this topic? If not, what assurances can you provide that you will be able to discharge your duties in this area impartially?

It is my understanding that recusal obligations do not extend to regulatory rulemaking of general applicability, which does not create a conflict under applicable rules. In any matters involving specific parties where I believe that my impartiality may be questioned, I will consult with relevant federal ethics officials to determine whether to participate in a particular matter, provide them with all relevant facts, and follow their guidance. Following these procedures, along with all the other commitments I have made to comply with applicable ethics rules, will ensure that I discharge my duties impartially.

79.How should the EPA consider the synergistic effects of chemicals when considering approval of these chemicals under FIFRA?

If confirmed, I would expect to be briefed by staff about EPA's relevant legal authorities concerning pesticide registration and current practices in this area before taking any action.

80.The Fish and Wildlife Service recently listed the rusty patched bumble bee as endangered, the first wild bee in the lower 48 states to receive this distinction. Pesticides were listed as part of the blame for the bee's current status. Other

AMERICAN OVERSIGHT

bumble bee species are also at risk due to increased pesticide use and other environmental challenges. How can the EPA assist in bettering the understanding of pesticides' role in declining bee and other pollinator species?

I am generally aware of the important role bees play as pollinators, but I am not personally familiar with the details of the Endangered Species Act listing decision referenced in the question. If confirmed as Administrator, I would expect EPA to be briefed on the matter concerning EPA's legal authorities and any ongoing activities in this area before taking action.

81.Under your leadership, what role will EPA play in the management and control of vector borne illnesses like Zika?

If confirmed, I would expect to be briefed by staff about EPA's relevant legal authorities and operations in this area before taking any action.

82.With respect to the Rule of Law Defense Fund, please provide the following: A written explanation of the role you or any person under your supervision has played in the establishment and operation of the Fund; a list of all donors who have contributed to the Fund since its inception, total donated, and their affiliations; a list of all requests you have made for funding and what was given and from whom in response; a list of all expenditures of over $1,000 made by the Fund since its inception; details of any Fund expenditures over $100 that have benefited you or any person under your supervision, including travel; all communications, including e-mails, between you and the Fund and between you and any individuals related to the establishment of the Fund or the conduct of the Fund's activities; a list of all meetings and fundraisers organized by or sponsored in whole or in part by the Fund that you or any person under your supervision attended, including the dates, locations, agendas and attendees; and a list of all federal and state legislation or regulations the Fund has taken a position on, Fund-organized legal briefs and letters to federal lawmakers, and all actions you have taken with respect to those matters.

I did not play a role in founding or forming the Rule of Law Defense Fund, and no one on my staff played such a role. My understanding from the time I was a member of that entity's board is that its staff operates the fund. A list of contributors to the Fund since its inception is in the custody of RLDF and I do not personally have records of or have knowledge of that information. Expenditures by the fund are in the custody of RLDF, and I do not personally have records of or have knowledge of that information. Any records relating to requests for funding to individuals or to corporate entities would be in the possession of RLDF. RLDF has paid for flights and accommodations when I attended RLDF events or panel discussions.

AMERICAN OVERSIGHT

Because those flights or accommodations were booked directly by RLDF staff, I am not in possession of any receipts for such flights or accommodations.

83.Please list all matters you or your office has had with the US EPA since you became Attorney General of Oklahoma. For the purposes of this and the following questions, “matters” refers to lawsuits (including lawsuits in which your office filed a “friend of the court” brief), enforcement actions, investigations, rulemakings, or any other matter which included an adjudication between parties.

In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act.

84.For each matter you identify in the previous question, please list the following: The names of the attorneys in your office who worked on the matter, and the names and affiliations of all attorneys with whom you or the attorneys in your office had communications about the matter. The names and affiliations of any person with whom you had communications about the matter, and the dates of the communications, and a summary of the substance of that communication. For any person listed the previous subpart, or corporation represented by that person, any contribution or payment made to Scott Pruitt for Attorney General, the Republican Attorney General Association, the Republican Attorney Generals Association, the Rule of Law Defense Fund, Liberty 2.0, Oklahoma Strong, or any other political action committee or 501(c)(4) organization with which you are or have been affiliated in any way.

In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct you to make a request of the Oklahoma Attorney General's Office and the Oklahoma Ethics Commission under the Oklahoma Open Records Act and the individual political organizations.

85.Please list all matters you or your office has had with the US Department of Interior since you became Attorney General of Oklahoma. For the purposes of this and the following questions, “matters” refers to lawsuits (including lawsuits in which your office filed a “friend of the court” brief), enforcement actions, investigations, rulemakings, or any other matter which included an adjudication between parties.

In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct

AMERICAN OVERSIGHT

you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act.

86.For each matter you identify in the previous question, please list the following: The names of the attorneys in your office who worked on the matter, and the names and affiliations of all attorneys with whom you or the attorneys in your office had communications about the matter. The names and affiliations of any person with whom you had communications about the matter, and the dates of the communications, and a summary of the substance of that communication. For any person listed the previous subpart, or corporation represented by that person, any contribution or payment made to Scott Pruitt for Attorney General, the Republican Attorney General Association, the Republican Attorney Generals Association, the Rule of Law Defense Fund, Liberty 2.0, Oklahoma Strong, or any other political action committee or 501(c)(4) organization with which you are or have been affiliated in any way.

In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct you to make a request of the Oklahoma Attorney General's Office and the Oklahoma Ethics Commission under the Oklahoma Open Records Act and the individual political organizations.

87.Please list all matters in which your office participated in any way challenging a law, rule, or regulation of a state other than Oklahoma. For each matter listed, please include the following: Your understanding of the effect of that law, rule, or regulation on the people of Oklahoma. The names of the attorneys in your office who worked on the matter, and the names and affiliations of all attorneys with whom you or the attorneys in your office had communications about the matter. The names and affiliations of any person with whom you had communications about the matter, and the dates of the communications, and a summary of the substance of that communication. For any person listed the previous subpart, or corporation represented by that person, any contribution or payment made to Scott Pruitt for Attorney General, the Republican Attorney General Association, the Republican Attorney Generals Association, the Rule of Law Defense Fund, Liberty 2.0, Oklahoma Strong, or any other political action committee or 501(c)(4) organization with which you are or have been affiliated in any way.

In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct you to make a request of the Oklahoma Attorney General's Office and the Oklahoma Ethics Commission under the Oklahoma Open Records Act and the individual political organizations.

AMERICAN OVERSIGHT

88. As Attorney General you have played a major rule challenging EPA's Clean Power Plan and seven other major rules protecting the public from air pollution, water pollution, and toxic threats. Professional ethics rules prohibit attorneys from changing sides, as you would be doing if confirmed. Federal ethical guidelines specifically require that a public official should not act on a matter if a reasonable person who knew the circumstances of the situation could legitimately question his or her fairness. Will you commit to recusing yourself from substantive matters that include EPA's climate rules, its mercury and air toxics rules, its most recent clean water rule, and others related to the eight pending cases you have against EPA as an Attorney General?

It is my understanding that recusal obligations do not extend to regulatory rulemaking of general applicability, which does not create a conflict under applicable rules. With respect to my professional obligations as a member of the bar, I am not permitted to "switch sides" as counsel in any matter in which I participated as a lawyer. The standards that would apply to me as EPA Administrator are different as I would not be representing the EPA as a lawyer. Nonetheless, in any matters involving specific parties where I believe that my impartiality may be questioned, I will consult with relevant federal ethics officials to determine whether to participate in a particular matter and provide them with all relevant facts.

89.You have taken credit for the lawsuit State of Oklahoma et al. v. Mahard Egg Farm. What was the date on which the complaint in that case was filed? What are the dates of the allegations in the case? Had any Oklahoma state agencies taken any steps to investigate that matter before you became Attorney General? If so, please specify the agencies, their roles investigating the case, and the dates on which they were taken. Did the Oklahoma Attorney General's office take any steps to investigate that matter before you became Attorney General? If so, please specify what was done and when. Please indicate the date on which the Attorney General's office first contacted defendant(s) in this matter.

As I have testified, it was a lawsuit that I initiated together with the State of Texas and the EPA. The complaint was filed on May 23, 2011. The consent decree was entered into on August 10, 2011. There was no case when I took office, but the matter had been investigated by the Office of Attorney General, the Oklahoma Department of Agriculture, the EPA, and the State of Texas. I do not know the first date that the Office of Attorney General first contacted the defendants in that matter.

90.Have you ever met or spoken with Richard "Rick" Berman, who has been affiliated with Center for Consumer Freedom? If so, please describe the substance and dates of your communications with him. Did you or the Attorney General's Office during your tenure ever receive communications of any sort from

AMERICAN OVERSIGHT

Mr. Berman or the Center for Consumer Freedom? If so, please specify the date and content of those communications.

I do not recall ever having met Mr. Berman. I am not aware of any communications with Mr. Berman, but a request for such information can be made to the Office of Attorney General pursuant to Oklahoma's Open Records Act.

91.Before March 12, 2014, had your office received any complaints about the Humane Society of the United States [HSUS] from a resident of the State of Oklahoma? If so, please identify the date of the complaint, the allegations in the complaint, and the city or town of residence of the complainant.

I believe that our office had received such a complaint, but I do not know the residency of any such complainant. A request for such information can be made to the Office of Attorney General pursuant to Oklahoma's Open Records Act.

92.In March 2014, your office issued a consumer warning about HSUS. Based on what evidence did you issue this warning? Did you or your office communicate to any person or entity outside the Attorney General's Office about the timing or substance of your consumer warning about HSUS before it was issued? If so, please state the names of those with whom you or your office communicated, the dates, and the substance of those communications.

The consumer warning was based on information suggesting that HSUS's solicitations for contributions might be misleading Oklahoma consumers. A request for communications can be made to the Office of Attorney General pursuant to Oklahoma's Open Records Act.

93.On July 1, 2014, your office issued a Civil Investigative Demand (CID) to HSUS. Based on what evidence did you issue that CID?

The purpose of a CID is to gather such evidence.

94.On or about July 21, 2014, after the New York Attorney General entered into a settlement with the direct mailing firm Quadriga Art, you were quoted as saying "We believe what happened in New York potentially has happened in Oklahoma." Based on what evidence did you make that statement? Did you issue a Civil Investigative Demand or subpoena to any organizations other than HSUS as a result in whole or in part because of the NYAG's Quadriga Act settlement? If so, please specify the names of the organizations, the dates of the CID, and the result of any investigation conducted pursuant thereto. If not, what evidence did you have that distinguished HSUS from any of the other clients of Quadriga Art?

AMERICAN OVERSIGHT

As I recall, the Office believed that Quadriga Art may have been the vendor for direct mailers used by HSUS in Oklahoma. I am not aware of any other CIDs issued as a result of the Quadriga Art settlement. I am not aware of the Office having received any complaints or having any open investigations relating to other Quadriga Art clients.

95.During the 2010 election cycle, did Devon Energy and Koch Industries max out to your campaign? During the 2014 election cycle, when you ran unopposed, did Devon, Koch Industries, and ExxonMobil max out to your campaign? How much total money has "Scott Pruitt for Attorney General" received from fossil fuel and agricultural interests? Please list your fossil fuel and agricultural donors, dates, and amounts.

A full list of contributors to my campaigns for the state senate and attorney general may be found at the Oklahoma Ethics Commission's websites. For state campaign committee from 2002-2014, please use this site: https://www.ok.gov/ethics/public/candidate.php. For 2015 to the present, the Commission uses this site: http://guardian.ok.gov/PublicSite/SearchPages/Search.aspx?SearchTypeCodeHook=1F26BA5E-71EA-48E4-8D50-C1013E9FE0A7. Attached is a letter from the Oklahoma Ethics Commission regarding materials prior to 2002.

96.How much total money did Oklahoma Strong, your leadership PAC, receive from fossil fuel and agricultural interests? Please list your fossil fuel and agricultural donors, dates, and amounts.

I do not manage or control Oklahoma Strong PAC. Questions relating to its donors would need to be directed to those who do.

97.How much total money did Liberty 2.0, the SuperPAC created to help get you elected, receive from fossil fuel and agricultural interests? Please list your fossil fuel and agricultural donors, dates, and amounts.

I do not manage or control Liberty 2.0. Questions relating to its donors would need to be directed to those who do.

98.Did you or anyone working for you or on your behalf ever solicit money for Oklahoma Strong or Liberty 2.0 from fossil fuel and agricultural interests? If so, when, from whom, and what was the result? Please note any solicitations that were made in which you mentioned work done in your official capacity as Attorney General of Oklahoma and what that work was.

I solicited funds for Oklahoma Strong PAC from a broad array of individuals and corporations representing many different industries. While I do not recall specific solicitations, given my state's deep ties to farming and oil and

AMERICAN OVERSIGHT

gas, I do not doubt that I at some point fundraised from individuals with some connection to those industries. Staff members of the Oklahoma Strong PAC may have records of such solicitations, so requests for details would have to be made to that entity. I have on occasion solicited funds for Liberty 2.0, and records of those solicitations may be maintained by the staff of that organization, so requests for details would have to be made to that entity. I do not recall the contents of any specific conversations that I may have had in this context.

99.During the hearing, I asked if you led the Rule of Law Defense Fund. In response, you stated you had "been an officer of the organization [Rule of Law Defense Fund] for 2016." Your EPW questionnaire states you were a board member or chairman at the Rule of Law Defense Fund between November 2013 and December 2016 while your OGE disclosure says you were a member of the board or Chair between April 2014 and December 2016. Please clarify when you were you a board member of the Rule of Law Defense and when were you the Chair.

I served on the Board of Directors of the Rule of Law Defense Fund from April 2014 until November 2016. I served as Chairman of the Board of Directors of the Rule of Law Defense Fund from November 2015 to November 2016.

100.During the hearing, I asked if you've ever solicited funds for RAGA and you stated you "did not serve in an officer capacity at that entity [RAGA]." On your EPW disclosure form you stated you were a member of the executive committee between November 2013 and November 2015. As discussed, OGE doesn't require you to disclose your relationship with RAGA or other 527 political organizations. Your LinkedIn and campaigns pages state you were chair of RAGA for two terms and RAGA's website indicates you were the RAGA chair in 2012 and 2013. Please clarify when you've been chair of RAGA and when you've been on RAGA's executive committee. Did you provide any information about your relationship with RAGA to OGE or EPA when they were reviewing your conflicts of interest?

I served as Chairman of the Republican Attorney Generals Association from November 2011 to November 2013. These dates represent "two terms" of serving as Chairman. Thereafter, I was a member of the Executive Committee from November 2013 to November 2015. I made all required disclosures to OGE and EPA ethics counsel, including disclosures about my relationship to RAGA.

101.RAGA has given other Republican attorneys general call sheets to solicit on its behalf. Have you or any person working on your behalf ever received call sheets from RAGA asking you to solicit money or event sponsorships? If so, when, for what purpose, who was on your list to contact, who if anyone did you or

AMERICAN OVERSIGHT

any member of your staff make contact any of the listed people/entities, and how much money and which sponsorships was given to RAGA as a result?

I did receive call sheets to solicit funds and/or event sponsorships for RAGA and I did make contact with the listed people/entities. The exact dates, the purpose, and who was called are records that are kept by RAGA, and those requests would need to be made to RAGA. Similarly, I do not have records of how much money or sponsorships were raised as a result - those records are kept by the Republican Attorneys General Association.

102.Besides call sheet efforts, did you or any person working on your behalf ever solicit money for RAGA? If so, when, from whom, for what purpose, and what was the result?

No one else working on my behalf has solicited funds for RAGA. In addition to call sheet efforts, I have asked for funds from individuals/entities in person for RAGA. Records of exact dates, names of individuals and entities and how much money was solicited are kept by the staff of RAGA.

103.In 2015, you were on the agenda to speak on a panel entitled, "The Dangerous Consequences of the Clean Power Plan and other EPA Rules" during RAGA's National Summer meeting that included several fundraisers. The agenda for that meeting included private meetings with attorneys general and Murray Energy, Southern Company, and American Fuel Petrochemical Manufacturers. According to RAGA's 2015 and 2016 member benefits descriptions, donors that contribute $50,000 or more have an "annual opportunity to lead private briefings with Republican attorneys general during RAGA events" and attend other private events, including private dinners and retreats, at which Republican attorneys general are present. Did you or any person working on your behalf attend any of the private meetings with Murray Energy, Southern Company, and/or the American Fuel Petrochemical Manufacturers during the 2015 Summer National RAGA meeting? If yes, please provide a list of meeting attendees, any minutes/notes taken, and describe any conversations about EPA matters.

I do not recall which meetings I attended at the event you reference.

104.During your time as a member of RAGA, have you or any person working on your behalf attended any private meetings or functions with co-plaintiffs or amici for any of the 14 cases you brought against EPA? If yes, please provide a description of the meeting, the date, a list of meeting/event attendees, any minutes/notes taken, and describe any conversations about EPA matters.

AMERICAN OVERSIGHT

I do not recall private meetings or functions with a co-plaintiff or amici while at a RAGA event, and do not know of any instance where a person working on my behalf attended such a meeting. In instances where a case is being litigated, counsel for each plaintiff or amici will routinely speak about matters related to the litigation, as court rules and other procedural matters often require such communications.

105.RAGA indicates that it raises and spends considerable amounts of money to support the election campaigns of Republican attorneys general. Please detail all expenditures from RAGA used to support your position in office, including but not limited to election campaign spending, contributions to other groups and PACs, and opposition research. Please detail any actions that you or your staff have taken to support the fundraising of RAGA for its campaign spending.

RAGA's Oklahoma PAC contributed $5,000 to Scott Pruitt for Attorney General in April, 2014. Inquiries about what other groups and third parties RAGA may have contributed to, or research they conducted would have to be directed to RAGA.

106.RAGA has indicated it has chartered flights for Republican attorneys general. Have you ever been a passenger on a RAGA-chartered flight? If so, when and where did you travel to and from? Did RAGA ever cover or reimburse you for transportation and accommodation? If so, please itemize when, for what, and the value.

Yes, I recall I was a passenger on a chartered flight to and from Las Vegas, Nevada in the fall timeframe of 2014. RAGA has covered the cost of flights and accommodations for me when I have attended RAGA meetings. I do not keep itemized records of these expenses, flights and accommodations are booked directly by RAGA staff.

107.While you were on the board of RLDF, did it cover any chartered flights on which you were a passenger or any of your transportation and accommodation costs? Please itemize any chartered or commercial flights, accommodations, and other travel-related expenses that exceed $100, and the value that RLDF covered.

As far as I am aware, RLDF has never covered the cost of chartered flights for me or my staff. RLDF has covered costs of transportation and accommodations when I traveled on behalf of RLDF for meetings, panels, and other policy-related events. The staff of RLDF booked travel and accommodations for me directly, and records of the costs and expenses are kept by Rule of Law Defense Fund staff and are not in my possession.

AMERICAN OVERSIGHT

108.In 2014 and 2015, while you were on the board or Chairman of RLDF, it contributed over half a million dollars to RAGA. Please list each transaction and the purpose of the transaction.

Records of transactions between those entities are held by Republican Attorneys General Association staff and Rule of Law Defense Fund staff and are not in my possession.

109.As Attorney General, you have jointly signed numerous letters with other Republican attorneys general, such as your letter of June 15 2016 outlining your opposition to state investigations of ExxonMobil. What role did the Rule of Law Defense Fund have in preparing and coordinating release of any letters signed by you as Attorney General? What role did the Republican Attorneys General Association have in preparing and coordinating release of any letters signed by you as Attorney General? What role did any corporate funder of Rule of Law Defense Fund or Republican Attorneys General Association have in preparing and coordinating release of any letters signed by you as Attorney General?

I am not aware of what steps may have been taken by the Rule of Law Defense Fund in preparing or coordinating letters. Day to day operations of the Rule of Law Defense Fund are delegated to staff of the organization. I am unaware of any role by RAGA in preparing or coordinating release of letters. My understanding is that such letters are typically released by the office who took the lead on preparing the letter. I am unaware of any corporate funder of either RAGA or RLDF having any role in preparing or coordinating the release of letters signed by my office.

110.During your time on the board or as Chairman of Rule of Law Defense Fund, did corporate donors to that organization participate in any meeting of the executive committee, including board meetings, phone calls or retreats, during which any EPA matters were discussed? If yes, which corporations participated, what was the nature of the event, and how did they participate (e.g., in person, by phone)?

During my time as Chairman of Rule of Law Defense Fund, I cannot ever recall a time when "corporate donors" participated in a meeting of the executive committee, including board meetings, phone calls or retreats during which EPA matters were discussed. However, members and funders of the Rule of Law Defense Fund were invited to attend large group panel discussions hosted by RLDF where several EPA matters were discussed. Any records of attendees at those meetings would be in the possession of the Rule of Law Defense Fund staff.

AMERICAN OVERSIGHT

111.During your time as attorney general, have you received gifts or in-kind donations that exceed $100 from any entities besides RAGA and RLDF? If so, please list when, from whom, and describe if it was related to a specific event or commitment.

I do not recall receiving gifts with a value of more than $100 from RAGA and/or RLDF. I have, as stated before, had travel and accommodations provided for me when I traveled to and from RAGA or RLDF meetings.

112.Will you commit to recusing yourself from matters before EPA involving any party from whom you have solicited funds during your time as Attorney General of Oklahoma?

Before participating in any matters involving specific parties where I believe that my impartiality may be questioned, I will consult with relevant federal ethics officials and provide them with all relevant facts.

113.Under your predecessors, senior EPA managers' schedules have been available to the public. If confirmed, do you agree to make senior managers' schedules available as well?

If confirmed, I will commit to following applicable laws concerning the public availability of schedules for senior managers.

114.How many email addresses have you used since becoming Attorney General of Oklahoma? How many do you still use? Please provide the domains of all email addresses you've used during your time as Attorney General of Oklahoma, along with the dates used, and note whether they were personal, professional, or both.

I have used two e-mail addresses since becoming Attorney General of Oklahoma. I use a personal e-mail address for personal e-mail, and an official e-mail address for official business. The domain of my personal e-mail address is me.com and the domain of my official e-mail address is oag.ok.gov.

115.Have you ever conducted business using your personal email accounts, non-official Oklahoma Attorney General email accounts, text messages, instant messenger, voicemails, or any other medium? If yes, please provide all business-related emails, texts, from those mediums and any others you've used to conduct official business.

I use only my official OAG email address and government issued phone to conduct official business.

AMERICAN OVERSIGHT

116.In a recent Oklahoma Strong fundraising email, you said:"...As Chairman of the Rule of Law Defense Fund, the policy arm for Republican Attorneys General, I asked my fellow AGs to sign onto a letter urging Senate Majority Leader McConnell and Judiciary Chairman Grassley to stand strong and continue to hold fast against this [Merrick Garland] nomination." What email address did you use to get the other attorneys general to sign onto this letter? What if any groups solicited signatures from other attorneys general? Did you ask Democrats to sign the letter or just Republicans?

I do not recall using any email address to solicit signatures. I have no knowledge of what other groups may have solicited signatures from attorneys general. I do not recall asking any Democrats to support the letter.

117.If confirmed, do you commit to notifying the Committee of all of the email addresses you plan to use upon confirmation and within seven days of using a new email address, including any aliases or pseudonyms? Do you commit do conducting all business using official email addresses and other means and to refrain from any mediums that are outside the Freedom of Information Act's reach?

If confirmed, I commit to notifying the Committee of the e-mail address I use for official business. I will use my official e-mail address for official EPA related business.

118.The office of the Oklahoma AG's budget and FTEs have grown significantly while you've been in office and you indicated you have seven FTEs, accounting for $679,000 in salaries, focused on "environmentally-related responsibilities." What is the breakdown of budget and FTEs dedicated to challenging EPA vs. criminal and civil environmental cases?

The Office's budget and expenditures can fluctuate greatly year over year depending on the timing of case settlements and related distributions. For example in fiscal year 2014, the Attorney General's Office distributed higher than normal case settlement funds that inflated the budget over typical levels. Conversely, that total came down in fiscal years 2015 and 2016. Thus, fluctuations such as the one assumed by your question do not accurately reflect the size of the Office's budget. In my tenure as Attorney General, the Oklahoma Office of the Attorney General streamlined legal services for dozens of agencies, returned $29 million to the General Revenue Fund, distributed mortgage settlement restitution funds to impacted citizens, strengthened tobacco enforcement, and led the Office in such a fiscally responsible manner that the Office was able to forego all $6.4

AMERICAN OVERSIGHT

million in state-appropriated operating funds for fiscal year 2017--that in addition to the Office having its annual appropriation cut in every prior year. The Office of Attorney General was the only state agency to voluntarily do this. During my tenure, the Office assumed the statutory duties of the Human Rights Commission through our Office of Civil Rights Enforcement, strengthened tobacco settlement enforcement efforts, and launched the Solicitor General's Unit. The Office also increased by one third the number of agencies, commissions, or boards which it represents. This has led to a precipitous decline in state agency usage of costly private counsel. It is these and other efforts that have permitted the Office to contribute approximately $29 million to the General Revenue Fund over the last six years. With regard to FTEs related "to challenging EPA vs. criminal and civil environmental cases," the Office currently has four FTEs whose responsibilities would include (among many other things) challenges to EPA rulemakings or other actions.

119.As submitted for the record, here are some statistics from Drew Edmonson's Environmental Unit (1997 to 2010): Criminal matters
142 criminal investigations; 56 federal or state prosecutions; 110 felony counts convictions of individuals; 21 misdemeanor count convictions of individuals; 10 felony counts convictions of corporations; 3 misdemeanor count convictions of corporations; 28 years of jail time; $8M in fines. Is it still your position that the Environmental Protection Unit was only handling one case when you took office?

I am not familiar with the cases being handled prior to my taking office. As I have stated, when I took Office, the primary focus of the "environmental protection unit" was a single lawsuit relating to poultry farms.

120.We reviewed the Oklahoma Attorney General's website between when you took office and the present and found no press releases on criminal or civil environmental enforcement matters. For this review, we did not include lawsuits by Oklahoma against EPA. Why were there no environmental enforcement matters listed on your website as of January 17, 2017?

I have not reviewed the website, so I am not familiar with what matters are or are not listed.

121.What specific reductions in air, water, or solid waste pollution have resulted from your environmental enforcement actions as Attorney General?

Environmental regulation in Oklahoma is the responsibility of Oklahoma's environmental regulators at agencies like the Oklahoma Department of Environmental Quality and the Oklahoma Water Resources Board. The

AMERICAN OVERSIGHT

Office of Attorney General sometimes provides legal services to those agencies with regard to environmental issues, and in that capacity the Office has, for example, negotiated a consent decree requiring a large concentrated animal feeding operation to clean up its operations to prevent water pollution, and negotiated an agreement whereby Arkansas agreed to a stringent phosphorous standard in the Illinois River.

122.How many criminal investigations, federal prosecutions, state prosecutions, felony count convictions of individuals, misdemeanor count convictions of individuals, felony count convictions of corporations, misdemeanor count convictions of corporations, years of jail time, and cumulative fines resulted from environmental cases you initiated? Please list and describe any civil suits and actions you initiated.

To list and describe every civil suit and action initiated by the Office of Attorney General would be all but impossible. Each attorney is responsible for maintaining their own case files, and the Office employs many attorneys across many different units who litigate civil matters of all kinds. In order for you to receive a comprehensive response to a voluminous request of that nature requesting information on all matters, I would direct you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act, and to the extent it is even possible to compile such a list, the Office would make efforts to do so.

123.The Center for Media and Democracy ORA request is dated on or about January 5, 2015. During the hearing, you said, "I actually have a general counsel and an administrator in my office that are dedicated to performing or providing responses to open records requests." In response to questions about the January 5, 2015 request, your general counsel apologized for the delayed response and explained she was busy with other duties. What percentage of time do each of the two staff you mentioned dedicate to responding to Open Records Act requests? Have you communicated with your office's general counsel or any other attorney handling ORA requests to discuss the timing of your office's response to any specific request? If so, please identify which requests you discussed, the dates of those discussions, and the substance of your discussions.

The Office of Attorney General employs a paralegal who intakes requests, opens files, and searches for documents responsive to each Open Records Act request. Once the search is complete, the office's general counsel must review each document to ensure it does not contain information required to be kept confidential under state and federal laws. Along with overseeing the Open Records Act process, the office's general counsel is responsible for overseeing many other programs and statutory duties with which the Office is tasked. I am unaware of what percentage of time is spent solely on Open Records Act requests. I do not recall any conversations with individuals in my office regarding the timing of Open Records Act responses.

AMERICAN OVERSIGHT

124. In a letter regarding this request, your general counsel stated your office processes "these requests in the order in which they are received." How long has that been the policy of your office? Have you fulfilled any ORA requests submitted since at least January 5, 2015?

To my knowledge, that is how the office has historically processed such requests. I am not aware of which requests submitted since January 5, 2015 have or have not been responded to.

125.According to a recent E&E article, your office has 52 outstanding open records requests. Please provide a list of all pending FOIA, Open Records Act or other similar information requests under Oklahoma state law, by whom, and when each was a filed.

I am not familiar with the pending requests. Such a requests should be directed to the Office of Attorney General's general counsel, who can provide such a list.

126.The public and this Committee, in fulfilling our constitutional advice and consent duties, have a right to see information pursuant to the Open Records Act. Please produce all of the following material that has been requested under the Open Records Act prior to November 8, 2016: related to RAGA, RLDF, Liberty 2.0, Oklahoma Strong, and any other 527s, 501(c)(3), and 501(c)(4)s, including the State Policy Network and ALEC; correspondence with the fossil fuel and agriculture industries and any other industries regulated by EPA; any other material related to energy, environment, agriculture, and EPA.

If Open Records Act requests for such information have been made, as your question suggests, those requests will be answered in the normal course.

127.Please provide a list of all Open Records Act requests your office has received during your tenure, from whom and when, the number of days it took to produce the requested documents or decline the request, the outcome of those requests including whether any decisions have been or currently are being challenged in court, and share the following material that has been disclosed as a result of those requests with the Committee: related to RAGA, RLDF, Liberty 2.0, Oklahoma Strong, and any other 527s, 501(c)(3), and 501(c)(4)s, including State Policy Network and ALEC; correspondence with the fossil fuel and agriculture industries and any other industries regulated by EPA; any other material related to energy, environment, agriculture, and EPA.

AMERICAN OVERSIGHT

In order for you to receive a comprehensive response to a voluminous request of that nature, I would direct you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act.

128.What was the average length of time it took your office to fulfill open record act requests to your office between January 2011 and December 6, 2014? What was the average length of time it took your office to fulfill open record act requests to your office from December 7, 2014 to the present? What, if any, steps has your office taken to improve the timeliness of your open records act responses?

I am not aware of what the average length of time my office took to fulfill open record act requests is. I have directed my staff to respond to all open records act requests in a timely and efficient manner.

129.Under what circumstances would it be appropriate for EPA to fail to respond to a FOIA request for 700 days?

I am not in a position to render an opinion a hypothetical given that different open record requests raise issues specific to the particular requests at issue. However, I appreciate the importance of openness and transparency, and if confirmed I will work to ensure EPA complies with all legal requirements concerning the implementation of the Freedom of Information Act and other statutes EPA is responsible for administering.

130.Why did you fail to disclose records on your office's expenditures on outside attorneys, as is required under Oklahoma state law, until contacted by a reporter? Why did you not hold your own office's spending practices to the same standard expected of other Oklahoma state offices?

The Office of Attorney General complies with its legal obligations relating to outside counsel, and discloses any outside counsel contracts when asked.

131.Is it correct that your office has spent over $1 million in outside lawyer expenses during your tenure? Please explain the unreported increase in expenses.

The bulk of the outside counsel expenses incurred by the Office during my tenure relate to a single dispute over water rights in southeastern Oklahoma. The Legislature specially appropriated funds to my office for the specific purpose of retaining outside counsel with expertise relevant to that tribal water law issue.

AMERICAN OVERSIGHT

132.Oklahoma state law requires that state agencies select attorneys from a pre-approved list. Several of the outside attorneys that your office has hired are not included on the list of approved attorneys. Why didn't you comply with this requirement?

Because the Office of Attorney General maintains the referenced list, and is authorized to allow representation from attorneys not on the list, the Office of Attorney General plainly has the discretion to allow representation from attorneys not on the list.

133.You have not released records on your contracts with outside attorneys, as required under Oklahoma state law. Please provide all contracts, including any related to pro-bono work. Have any private interests been funding outside attorneys representing your office in lawsuits against the federal government? If so, who, why, and in what amounts? For any pro-bono work, is that an in-kind donation that should be recorded and accounted for in your office's accounting? Has your office done so? Please provide a list of these in-kind donations, from whom, when the work was done, and the value.

A requests for such contracts can made to the Office of Attorney General pursuant to Oklahoma's Open Records Act. When my office retains outside counsel to assist on a matter, it either compensates those attorneys itself, or the outside counsel provides the services pro bono. I am not aware of any outside funding of pro bono counsel, and would not retain any pro bono counsel if they were being so funded. I am not aware of any requirement that pro bono legal services be considered an in kind donation to the Office of Attorney General.

134.You received campaign contributions from at least one of the attorneys that provided outside representation for Oklahoma—David Rivkin, of D.C. law firm BakerHostetler. Is there a prohibition on receiving campaign contributions from those in a contractual relationship with your office? Was your contribution from Mr. Rivkin in compliance with such requirements?

I am not aware of any such requirements. In any event, Mr. Rivkin received no compensation from the Office for the legal services he provided.

135.Are you aware of any payments made to Mr. Rivkin from other parties in return for his representation of your state?

I am unaware of any payments made to Mr. Rivkin from any other parties in return for his representation.

AMERICAN OVERSIGHT

136.Did you contact Mr. Rivkin about representing the State of Oklahoma, did he contact you, or did a third-party made the connection? Please explain.

I cannot recall the exact circumstances leading to Mr. Rivkin's representation, or who initiated the contact. Mr. Rivkin has represented over half of our Nation's states on various matters, and is a well-recognized expert on constitutional questions, particularly those relating to States and their federalism interests.

137.According to your questionnaire, you've given dozens of environment-related speeches in Oklahoma and around the country, many to industry groups. Have you ever given one to a public health group, environmental NGO, or scientific society? You've received various awards, several from industry groups. Have you ever received an award from a public health or environmental group for protecting public health? How about environmental quality? Have you ever received an award from a scientific society?

I have given dozens of speeches on a wide variety of topics to many different groups and industries. I do not recall a specific public health group, NGO or scientific society I have spoken to. I do not recall receiving awards from a public health or environmental group or a scientific society.

138.Please provide any correspondence or details about other communication between you or anyone working on your behalf concerning the establishment or activities of America Rising, America Rising Squared, and Protecting America Now, and any other organizations that are funding efforts to get you confirmed as EPA Administrator.

I am not aware of any such correspondence.

139.You wrote an op-ed attacking efforts to investigate whether Exxon deliberately misled investors and the public despite internal research confirming that climate change is real. Please describe any conversations you've had with political donors to you or your affiliated political action committees, RAGA, Rule of Law Defense Fund, or co-plaintiffs or amici in your cases against EPA about ExxonMobil's potential liability under federal or state law regarding climate change (e.g., federal RICO, New York state's Martin Act, etc.), including the date and substance of those conversations.

I do not recall any such conversations.

AMERICAN OVERSIGHT

140.During your time as the Attorney General of Oklahoma, have you or anyone in your immediate family owned any stocks of companies that were co-plaintiffs or amici in any of your 14 cases against the EPA, including ExxonMobil, Devon Energy, Murray Energy, Southern Company, and Continental Resources. If yes, please list the stock, dates held, and amount.

To my knowledge, no, and a list of my investments has been provided as part of my financial disclosures.

141.In implementing the Lautenberg Act, EPA, consistent with congressional intent, issued a notice making it clear that substantiation of all non-exempt confidential business information (CBI) claims is required upfront. Do you commit to ensuring the EPA follows and upholds that requirement?

As I have previously stated I believe the Lautenberg Act struck an appropriate balance between protecting confidential business information and informing the public and I intend to apply the law as drafted by congress.

142.In a speech at Hillsdale College on June 30, 2016, you referred to a three-hour private, basement meeting with Supreme Court Justices Scalia and Thomas, Leonard Leo of the Federalist Society, and other unidentified people. Referring to Justice Scalia, you said: Leonard [Leo] blessed me on a number of occasions to spend some quality time, personal time, with the previous justice. In fact, I remember one year about three years ago, I was here for a Federalist Society event, their annual meeting that occurs in November. Leonard said 'Scott, stay over, I'd like for you to go dinner on Friday night'… we went to a basement in Washington DC, there were about ten of us in attendance. Two of those folks in attendance were Justice Scalia and Justice Thomas. And we spent three hours talking about the constitution and things that were involved in as attorneys general. It was a fabulous time.

What was the date of this basement meeting? Please provide a complete list of the participants. Please list all cases pending before the Supreme Court at the time of this meeting in which the State of Oklahoma was a party and/or on which you or an attorney in your office was counsel of record. During the basement meeting, was there any discussion or mention of EPA, the environment, public health, environmental or public health regulations, environmental laws including but limited to the Clean Air Act, the Clean Water Act, NEPA, mercury, cross-state air pollution, Renewable Fuels Standards, ozone standards, endangerment from GHGs, regional haze, or climate change. If so, please identify the specific topics that were discussed or mentioned. Have you ever had any other private meetings with any other state or federal judges or justices while you had cases pending before their courts? Which cases? Please describe any such meeting, including the dates, locations, attendees, and topics discussed.

AMERICAN OVERSIGHT

I do not recall the date of the dinner to which you refer, but I believe it was in November 2013. It was a private dinner. I am not aware of any matters that my office had pending before the Supreme Court at the time. As far I recall, none of the topics you mentioned was discussed, nor was any specific matter of any sort discussed. I am not aware of any other meetings of the sort to which you refer. In my capacity as attorney general, I am often at events with judges or justices of various sorts, but no discussion of pending matters would ever occur in any social interactions we might have.

143.The lifetime emissions of any energy source should be considered in the context of necessary extraction techniques as well as transportation of the fuel, among other issues. For example, transporting crude via pipeline clearly creates fewer emissions than transporting it via other sources in terms of fossil fuel energy. Without knowing the specifics of all of these factors in a given instance, it is difficult to identify which sources may result in greater emissions.

The role of the United States in the Paris Agreement is a State Department matter. If confirmed, I will work to advance the mission of the EPA, which is to protect human health and the environment, consistent with the State Department's strategy for international engagement on climate change.

144. Do you support the amendment to the Montreal Protocol to phase down HFCs?

Should the State Department decide to advance the Kigali Amendment to the Montreal Protocol and if I am confirmed as Administrator, I will work with all involved agencies and impacted stakeholders to ensure that EPA's actions related to hydrofluorocarbons (HFCs) are coordinated accordingly.

Subject: Politico Mag: New Questions on Tar Creek Audit

Hi Jahan,

I'm writing a story for POLITICO magazine that's following up on my feature from last December on Tar Creek. It'll be shorter, something of a news piece related to the news Monday that Oklahoma AG Mike Hunter released the audit report from the Tar Creek investigation that EPA Administrator Pruitt ordered years ago when he was AG.

We want to publish this Monday, if not before.

I'm hoping to get answers to **four questions listed below**, circling back to my conversation with EPA Administrator Pruitt last November. Give me a call if you'd like to discuss — on or off record — on my cell: Ex. 6 - Personal Privacy anytime.

If I don't hear back from you by early tomorrow, I'll follow up with a call early tomorrow.

Refresher: In November, Administrator Pruitt explained his decision to not release the Tar Creek audit (back in 2015, during the time he was Oklahoma AG) to the public because

A) the audit didn't turn up sufficient evidence to pursue

AMERICAN OVERSIGHT

prosecution

B) As a result, he didn't want innocent people to be besmirched, to protect their names and reputations.

His exact response was "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and as such, it was important to protect the individuals' reputation that were in that investigation."

Therefore, my questions:

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

AMERICAN OVERSIGHT

Thanks,

Malcolm

AMERICAN OVERSIGHT

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

Ex. 5 - Deliberative Process

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

Subject: Politico Mag: New Questions on Tar Creek Audit

Hi Jahan,

I'm writing a story for POLITICO magazine that's following up on my feature from last December on Tar Creek. It'll be shorter, something of a news piece related to the news Monday that Oklahoma AG Mike Hunter released the audit report from the Tar Creek investigation that EPA Administrator Pruitt ordered years ago when he was AG.

We want to publish this Monday, if not before.

I'm hoping to get answers to **four questions listed below**, circling back to my conversation with EPA Administrator Pruitt last November. Give me a call if you'd like to discuss — on or off record — on my cell: Ex. 6 - Personal Privacy anytime.

If I don't hear back from you by early tomorrow, I'll follow up with a call early tomorrow.

Refresher: In November, Administrator Pruitt explained his decision to not release the Tar Creek audit (back in 2015, during the time he was Oklahoma AG) to the public because

A) the audit didn't turn up sufficient evidence to pursue prosecution

B) As a result, he didn't want innocent people to be besmirched, to

AMERICAN OVERSIGHT

protect their names and reputations.

> His exact response was "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and as such, it was important to protect the individuals' reputation that were in that investigation."

Therefore, my questions:

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

Thanks,

Malcolm

Subject: Politico Mag: New Questions on Tar Creek Audit

Hi Jahan,

I'm writing a story for POLITICO magazine that's following up on my feature from last December on Tar Creek. It'll be shorter, something of a news piece related to the news Monday that Oklahoma AG Mike Hunter released the audit report from the Tar Creek investigation that EPA Administrator Pruitt ordered years ago when he was AG.

We want to publish this Monday, if not before.

I'm hoping to get answers to **four questions listed below**, circling back to my conversation with EPA Administrator Pruitt last November. Give me a call if you'd like to discuss — on or off record — on my cell: Ex. 6 - Personal Privacy anytime.

If I don't hear back from you by early tomorrow, I'll follow up with a call early tomorrow.

Refresher: In November, Administrator Pruitt explained his decision to not release the Tar Creek audit (back in 2015, during the time he was Oklahoma AG) to the public because

A) the audit didn't turn up sufficient evidence to pursue prosecution

B) As a result, he didn't want innocent people to be besmirched, to protect their

AMERICAN OVERSIGHT

names and reputations.

> His exact response was "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and as such, it was important to protect the individuals' reputation that were in that investigation."

Therefore, my questions:

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

Thanks,

Malcolm

> We want to publish this Monday, if not before.

AMERICAN OVERSIGHT

I'm hoping to get answers to **four questions listed below**, circling back to my conversation with EPA Administrator Pruitt last November. Give me a call if you'd like to discuss — on or off record — on my cell: Ex. 6 - Personal Privacy anytime.

If I don't hear back from you by early tomorrow, I'll follow up with a call early tomorrow.

Refresher: In November, Administrator Pruitt explained his decision to not release the Tar Creek audit (back in 2015, during the time he was Oklahoma AG) to the public because

A) the audit didn't turn up sufficient evidence to pursue prosecution

B) As a result, he didn't want innocent people to be besmirched, to protect their names and reputations.

> His exact response was "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and as such, it was important to protect the individuals' reputation that were in that investigation."

Therefore, my questions:

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

AMERICAN OVERSIGHT

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

Thanks,

Malcolm

Subject: FW: Tulsa World: Some believe Scott Pruitt is eyeing U.S. Senate campaign from his seat as EPA head, 8/10/17

FYI

Tulsa World

http://www.tulsaworld.com/homepagelatest/randy-krehbiel-some-believe-scott-pruitt-is-eyeing-u-s/article_8df80b4a-fde8-59d5-b67b-153214782f0f.html

Some believe Scott Pruitt is eyeing U.S. Senate campaign from his seat as EPA head

By: Randy Krehbiel, 8/9/17

Former Oklahoma Attorney General Scott Pruitt's foray into the federal bureaucracy as Environmental Protection Agency administrator doesn't seem to have diminished speculation that his ultimate goal is the U.S. Senate.

Although he remains mum about his long-range plans, Pruitt has long been seen as a potential successor to U.S. Sen. Jim Inhofe, who would be up for re-election in 2020, when he turns 86.

Inhofe has not said whether he'll seek another term, but he has always been very complementary of Pruitt and, publicly at least, seems to regard Pruitt as a worthy protege.

In a piece published Wednesday morning, Politico suggests some of Pruitt's EPA initiatives are regarded as political theater. His proposed televised debates on climate change are viewed with particular skepticism, according to the piece.

"The man's running for Senate (in 2020)," says David Bookbinder of the Niskanen Center, a libertarian-leaning policy institute that favors federal regulation of greenhouse gases. "Everything he says is calculated toward securing the Republican nomination in Oklahoma and

AMERICAN OVERSIGHT

then winning the general election there."

Pruitt has been and continues to be the subject of intense scrutiny in Washington. Most recently, reporters have been reexamining Pruitt's handling five years ago of a state auditor and inspector's report on a trust created to administer relocation of residents in the area of Tar Creek in Ottawa County.

Pruitt, who was attorney general at the time, took the report to the state's multi-county grand jury, but no action was taken. Pruitt subsequently refused to release the report, saying he believed it might cast private citizens in an unfavorable light.

At the time, Auditor and Inspector Gary Jones, now a candidate for governor, disagreed with Pruitt.

More recently, as a result of Open Records Act requests for the audit, Jones' office asked current Attorney General Mike Hunter for guidance on the matter.

In a letter dated Aug. 3, Senior Deputy Attorney General Tom Gruber told Jones' office "this audit shall remain a confidential criminal investigatory file in the Office of the Attorney General and will not be released."

A long record in public office can be fertile ground for political foes. The Politico piece says that while Pruitt's energy allies want a more favorable regulatory environment, they don't necessarily want a showdown on environmental science, because that's a fight they could lose.

And if they lose, so does Scott Pruitt.

Tulsa World: Some believe Scott Pruitt is eyeing U.S. Senate campaign from his seat as EPA head

Former Oklahoma Attorney General Scott Pruitt's foray into the federal bureaucracy as Environmental Protection Agency administrator doesn't seem to have diminished speculation that his ultimate goal is the U.S. Senate. Although he remains mum about his long-range plans, Pruitt has long been seen as a potential successor to U.S. Sen. Jim Inhofe, who would be up for re-election in 2020, when he turns 86. Inhofe has not said whether he'll seek another term, but he has always been very complementary of Pruitt and, publicly at least, seems to regard Pruitt as a worthy protege.

E&E News: Despite rumors, Chicago office isn't closing soon

U.S. EPA is looking for ways to reduce its physical footprint, but that doesn't include plans to shut down the agency's regional office in Chicago. For months, rumors have circulated around Washington that the Trump administration would shutter EPA's Region 5 office, located within the Ralph Metcalfe Federal Building. Senate Democrats have warned EPA

AMERICAN OVERSIGHT

against attempting the move, and Sen. Tammy Duckworth (D-Ill.) even introduced legislation to prevent the closure of any of the agency's regional offices. But the General Services Administration — which leases buildings for EPA office space and would have to execute any physical moves to a new building — told E&E News that no such plan is currently in the works.

The Washington Examiner: Federal court strikes down EPA rule key to Obama's climate agenda

A federal court struck down a key piece of the Obama administration's climate agenda on Tuesday by saying the Environmental Protection Agency does not have the authority to ban the use of certain chemicals used in air conditioners blamed for exacerbating global warming. The EPA enacted the rule in question in 2015, responding to research showing hydroflourocarbons, or HFCs, contribute to climate change. The D.C. Circuit Court of Appeals' 2-1 decision said EPA does not have the authority to enact a 2015 rule-making ending the use of hydrofluorocarbons commonly found in spray cans, automobile air conditioners and refrigerators. The three-judge panel said that because HFCs are not ozone-depleting substances, the EPA could not use a section of the Clean Air Act targeting those chemicals to ban HFCs.

The Daily Caller: Scientists Say There's 'No Indication' Trump Tried To Suppress Climate Change Report

There's been no indication the Trump administration has tried to suppress or alter any of the findings of a soon-to-released climate change report, according to scientists working on the assessment. "It was under the radar and we were fine about that," one scientists involved in the report told The Associated Press in an article published Tuesday morning. Three other report co-authors "have not heard of or witnessed any attempt by the White House to suppress or censor the scientific document," reported the AP.

Hollywood Reporter: Breitbart Attacks New York Times, Reveals Potential Leakers at EPA

The website published an email from a reporter that was forwarded to agency employees by a union leader. In what the right-leaning website called evidence that "the Deep State teams with Fake News," Breitbart News reported Tuesday that a New York Times reporter sought to get insider accounts of enhanced secrecy at the EPA. Matthew Boyle, Breibart's Washington political editor, obtained a copy of an email sent by a union leader. The email, which included the text of what the Times reporter had sent the union boss, was distributed to a group of EPA employees who were told that the Times reporter "needs our assistance in

AMERICAN OVERSIGHT

verifying some information she has heard."

Agricluture.com: EPA asks if it should lower Biodiesel Mandate

The volume of imported biodiesel fuel, surging to 731 million gallons last year and continuing this year, is causing the EPA to think twice about where to set the Renewable Fuels Standard, created to move the U.S. toward energy security. Imports "may not have the same impact on energy independence" as domestic production, says the agency. Aided by public comment, it will consider whether to lower the target for biodiesel consumption. The biodiesel mandate is 2 billion gallons this year and 2.1 billion gallons in 2018. For 2019, EPA proposed a 2.1 billion-gallon mandate.

National Evening News 8/9/17

-

The Washington Post: FBI conducted predawn raid of former Trump campaign chairman Manafort's home

FBI agents raided the Alexandria home of President Trump's former campaign chairman late last month, using a search warrant to seize documents and other materials, according to people familiar with the special counsel investigation into Russian meddling in the 2016 election. Federal agents appeared at Paul Manafort's home without advance warning in the predawn hours of July 26, the day after he met voluntarily with the staff for the Senate Intelligence Committee.

The Hill: Mattis warns North Korea of 'destruction of its people'

Defense Secretary James Mattis warned North Korea in stark terms on Wednesday that it faces devastation if it does not end its pursuit of nuclear weapons. "The DPRK must choose to stop isolating itself and stand down its pursuit of nuclear weapons," Mattis said in a statement, referring to North Korea. "The DPRK should cease any consideration of actions that would lead to the end of its regime and the destruction of its people."

Some believe Scott Pruitt is eyeing U.S. Senate campaign from his seat as EPA head

By Randy Krehbiel, 8/9/17

Former Oklahoma Attorney General Scott Pruitt's foray into the federal bureaucracy as Environmental Protection Agency administrator doesn't seem to have diminished speculation that his ultimate goal is the U.S. Senate.

Although he remains mum about his long-range plans, Pruitt has long been seen as a potential successor to U.S. Sen. Jim Inhofe, who would be up for re-election in 2020, when he turns 86.

Inhofe has not said whether he'll seek another term, but he has always been very complementary of Pruitt and, publicly at least, seems to regard Pruitt as a worthy protege.

In a piece published Wednesday morning, Politico suggests some of Pruitt's EPA initiatives are regarded as political theater. His proposed televised debates on climate change are viewed with particular skepticism, according to the piece.

"The man's running for Senate (in 2020)," says David Bookbinder of the Niskanen Center, a libertarian-leaning policy institute that favors federal regulation of greenhouse gases. "Everything he says is calculated toward securing the Republican nomination in Oklahoma and then winning the general election there."

Pruitt has been and continues to be the subject of intense scrutiny in Washington. Most recently, reporters have been reexamining Pruitt's handling five years ago of a state auditor and inspector's report on a trust created to administer relocation of residents in the area of Tar Creek in Ottawa County.

Pruitt, who was attorney general at the time, took the report to the state's multi-county grand jury, but no action was taken. Pruitt subsequently refused to release the report, saying he

AMERICAN OVERSIGHT

believed it might cast private citizens in an unfavorable light.

At the time, Auditor and Inspector Gary Jones, now a candidate for governor, disagreed with Pruitt.

More recently, as a result of Open Records Act requests for the audit, Jones' office asked current Attorney General Mike Hunter for guidance on the matter.

In a letter dated Aug. 3, Senior Deputy Attorney General Tom Gruber told Jones' office "this audit shall remain a confidential criminal investigatory file in the Office of the Attorney General and will not be released."

A long record in public office can be fertile ground for political foes. The Politico piece says that while Pruitt's energy allies want a more favorable regulatory environment, they don't necessarily want a showdown on environmental science, because that's a fight they could lose.

And if they lose, so does Scott Pruitt.

E&E News

Despite rumors, Chicago office isn't closing soon

By Niina Heikkinen, 8/9/17

U.S. EPA is looking for ways to reduce its physical footprint, but that doesn't include plans to shut down the agency's regional office in Chicago.

AMERICAN OVERSIGHT

For months, rumors have circulated around Washington that the Trump administration would shutter EPA's Region 5 office, located within the Ralph Metcalfe Federal Building. Senate Democrats have warned EPA against attempting the move, and Sen. Tammy Duckworth (D-Ill.) even introduced legislation to prevent the closure of any of the agency's regional offices.

But the General Services Administration — which leases buildings for EPA office space and would have to execute any physical moves to a new building — told E&E News that no such plan is currently in the works.

"EPA has not asked GSA to move their Region 5 office from the federal building nor have they requested to consolidate the office," Nick Smith, a public affairs official at GSA, said in an email.

Other changes to the agency's office space are happening at EPA, though most of them began under the Obama administration.

For example, EPA's regional headquarters in Dallas is planning a move to the city's Renaissance Tower at the beginning of 2019.

In 2016, EPA began looking for new office space in Philadelphia for employees at its Region 3 office. Its current lease expires in May 2018.

The agency is also looking at ways to reduce how much square footage EPA uses within existing office space, known as "densifying."

This can be achieved by analyzing how the offices are organized, said Marcy Owens Test, senior vice president of CBRE Group Inc. and a member of the Federal Lessor Advisory Group. FLAG provides brokerage and lease consulting for the federal government. Test also formerly worked as a contracting officer for GSA.

AMERICAN OVERSIGHT

Test noted that EPA's regional offices tend to occupy multiple floors in large buildings. Reorganizing offices could potentially mean that EPA gives up a floor or two of space that GSA could then potentially "backfill" with other tenants.

"That's a matter of shrinking your cube sizes and workplace sizes and reconfiguring the space, and you never laid off a person. It may be how you are utilizing the space and how the space is best utilized for the mission," Test said in an interview earlier this year.

If EPA reduces its footprint within existing office space, or relocates entirely, that would require a negotiation between EPA and GSA "because the lease or the federal building are in play and they are occupying that space," Test said.

In EPA's appropriations justification for fiscal 2018, the agency cites an ambitious plan for shedding 336,000 square feet of office space.

"The EPA will continue to invest to reconfigure the EPA's workspaces enabling the agency to release office space and reduce long-term rent costs," the document states.

According to EPA, since fiscal 2012, the agency has released more than 517,000 square feet of office space across the country, leading to $20 million in avoided rent costs. The rent savings from releasing more property back to GSA would help to offset rising rent and security costs at the agency.

The moves are part of an ongoing effort in recent years across the federal government to find more efficient ways to use office space and save money.

In 2010, President Obama issued a presidential memorandum, "Disposing of Unneeded Federal Real Estate," which required federal agencies to pick up the pace of getting rid of "excess properties."

AMERICAN OVERSIGHT

The memo called for "increasing occupancy rates in current facilities through innovative approaches to space management and alternative workplace arrangements, such as telework; and identifying offsetting reductions in inventory when new space is acquired."

Questions about the regional office closure in Chicago first sprang up after a Chicago Sun-Times article cited an anonymous source close to the federal government who claimed that Trump planned to eliminate the Great Lakes region office and might combine it with the EPA regional office in Kansas.

EPA Administrator Scott Pruitt has repeatedly denied suggestions that such a plan existed, calling the idea "pure legend" during a congressional budget hearing in June.

"There is no consideration presently with respect to any regional offices about moving them to one location or another. I'm not sure where that came from," Pruitt told the House Interior, Environment and Related Agencies Appropriations Subcommittee (E&E News PM, June 15).

The Washington Examiner

http://www.washingtonexaminer.com/federal-court-strikes-down-epa-rule-key-to-obamas-climate-agenda/article/2630923

Federal court strikes down EPA rule key to Obama's climate agenda

By John Siciliano, 8/8/17

A federal court struck down a key piece of the Obama administration's climate agenda on Tuesday by saying the Environmental Protection Agency does not have the authority to ban the use of certain chemicals used in air conditioners blamed for exacerbating global warming.

The EPA enacted the rule in question in 2015, responding to research showing hydroflourocarbons, or HFCs, contribute to climate change.

AMERICAN OVERSIGHT

The D.C. Circuit Court of Appeals' 2-1 decision said EPA does not have the authority to enact a 2015 rule-making ending the use of hydrofluorocarbons commonly found in spray cans, automobile air conditioners and refrigerators. The three-judge panel said that because HFCs are not ozone-depleting substances, the EPA could not use a section of the Clean Air Act targeting those chemicals to ban HFCs.

"Indeed, before 2015, EPA itself maintained that Section 612 did not grant authority to require replacement of nonozone-depleting substances such as HFCs," the court wrote.

"EPA's novel reading of Section 612 is inconsistent with the statute as written. Section 612 does not require (or give EPA authority to require) manufacturers to replace non-ozonedepleting substances such as HFCs," said the opinion, written by Judge Brett Kavanaugh.

The Obama administration issued the regulatory changes to correspond with the 1987 Montreal Protocol that sought to stop the depletion of the ozone layer by phasing out another chemical found in aerosols. The 2015 update was part of former President Barack Obama's climate change agenda due to the impact of HFCs on the climate.

"This ruling has significant implications for our industry and we will be monitoring the EPA's response closely," said Stephen Yurek, president and CEO of the Air-Conditioning, Heating, and Refrigeration Institute, whose industry is directly affected by the regulations. "Despite the court's decision, our industry remains committed to ratification and implementation of the Kigali Amendment to globally phase down the use of HFC refrigerants."

Under the Kigali agreement, the U.S. and other countries agreed to phase out HFCs and use alternative chemicals over a number of years. The agreement was seen as an adjunct to the Paris climate change agreement.

The Trump EPA will have to decide whether it will appeal the court's Tuesday ruling,

AMERICAN OVERSIGHT

which was brought by HFC manufacturers Chemours Co. and Honeywell International. "We are reviewing the decision," said an EPA representative.

The Kigali Agreement and the HFC rule have not been a specific target of the Trump administration, and given that many appliance manufacturers support the regulations, President Trump may find little in the way of problems with the regulations.

But critics of the Kigali agreement are out there, and they undoubtedly will be pushing for Pruitt to allow the court decision to stick. Myron Ebell with the free-market Competitive Enterprise Institute is one of those voices. He was Trump's EPA transition chief who helped ramp up the agency.

"CEI opposes the Kigali amendment because the purpose of the Montreal Protocol to the Vienna treaty is to protect the ozone layer," Ebell said in May. And the "Kigali amendment hijacks the Montreal Protocol and turns it into a global warming treaty."

The Daily Caller

http://dailycaller.com/2017/08/09/scientists-say-theres-no-indication-trump-tried-to-suppress-climate-change-report/

Scientists Say There's 'No Indication' Trump Tried To Suppress Climate Change Report

By Michael Bastasch, 8/9/17

There's been no indication the Trump administration has tried to suppress or alter any of the findings of a soon-to-released climate change report, according to scientists working on the assessment.

"It was under the radar and we were fine about that," one scientists involved in the report told The Associated Press in an article published Tuesday morning.

AMERICAN OVERSIGHT

Three other report co-authors "have not heard of or witnessed any attempt by the White House to suppress or censor the scientific document," reported the AP.

Sources involved in the report, which is part of the National Climate Assessment, "have seen no indication that the White House might suppress the scientific research," reported Politico.

The New York Times ran a front page article on Tuesday claiming to have "obtained" a draft climate report some scientists feared the Trump administration would suppress. The report, which is part of the National Climate Assessment, found "[e]vidence for a changing climate abounds, from the top of the atmosphere to the depths of the oceans.

It turned out the draft report was actually available online, undercutting the narrative it could be censored by Trump officials. But even before then, climate scientists who worked on the report saw no evidence of interference by administration officials.

Nature reported about a week before TheNYT that "[a]lthough there have not yet been any signs of trouble, researchers are keeping a close eye on how the White House and federal agencies handle the science report."

After TheNYT published its article, report authors were quick to point out the report hadn't been delayed. The Trump administration had until August 18 to approve the report for public release.

The Trump administration plans on approving the climate report by the deadline and releasing it in the fall.

The Hollywood Reporter

http://www.hollywoodreporter.com/news/breitbart-attacks-new-york-times-reveals-potential-leakers-at-epa-1027957

AMERICAN OVERSIGHT

Breitbart Attacks New York Times, Reveals Potential Leakers at EPA

By Jeremy Barr, 8/9/17

The website published an email from a reporter that was forwarded to agency employees by a union leader.

In what the right-leaning website called evidence that "the Deep State teams with Fake News," Breitbart News reported Tuesday that a New York Times reporter sought to get insider accounts of enhanced secrecy at the EPA.

Matthew Boyle, Breibart's Washington political editor, obtained a copy of an email sent by a union leader. The email, which included the text of what the Times reporter had sent the union boss, was distributed to a group of EPA employees who were told that the Times reporter "needs our assistance in verifying some information she has heard."

Much of the media industry snarked Breitbart's story by suggesting that the Times was caught red-handed trying to do actual reporting. But, more ominous and troubling — particularly for the Times — was Breitbart's decision to make visible the names of the EPA employees who received the forwarded email from the union leader (though their email addresses were redacted).

These employees may now face consequences for being seen as potential leakers. And, by outing these government employees, the Breitbart story could serve to chill other would-be leakers at other government agencies.

"Stories like this can have a chilling effect on precisely the type of investigative journalism that holds government power to account," Times spokeswoman Danielle Rhoades Ha told The Hollywood Reporter when asked about the impact of the piece.

Breitbart, and Boyle particular, are seen as being supportive of the administration, which much of right-leaning media feels is unfairly under attack by the mainstream media. In this particular case, the story published Tuesday could serve to tamp down potential leaks that

AMERICAN OVERSIGHT

could end up in the Times and be injurious to the president.

Kurt Bardella, who used to work as Breibart's spokesperson, said the story — particularly the decision to disclose the names of would-be EPA sources — is in line with the site's role as something of an attack dog for the administration.

"There is no question that Boyle & Breitbart published the story with the intent of attracting as much scrutiny as possible on these EPA staffers," Bardella told THR. "It's essentially a road map for the leak investigators inside the Trump administration to follow directly to these staffers. As is standard operating procedure, Breitbart is doing the White House's dirty work, showcasing once again that there is zero line of separation between Breitbart and the Trump White House."

Agriculture.com

http://www.agriculture.com/news/business/epa-asks-if-it-should-lower-the-biodiesel-mandate

EPA asks if it should lower Biodiesel Mandate

By Chuck Abbott, 8/9/17

The volume of imported biodiesel fuel, surging to 731 million gallons last year and continuing this year, is causing the EPA to think twice about where to set the Renewable Fuels Standard, created to move the U.S. toward energy security. □

Imports “may not have the same impact on energy independence” as domestic production, says the agency. Aided by public comment, it will consider whether to lower the target for biodiesel consumption.

The biodiesel mandate is 2 billion gallons this year and 2.1 billion gallons in 2018. For 2019, EPA proposed a 2.1 billion-gallon mandate. It intends to finalize the RFS in November. (The biodiesel mandate is set more than a year in advance, while ethanol is announced just before the start of the calendar year.)

AMERICAN OVERSIGHT

In March, the biodiesel industry filed a trade complaint alleging that Indonesia and Argentina unfairly subsidized biodiesel producers and dumped the fuel in the U.S.

The Commerce Department is expected to make a preliminary determination later this month of estimated subsidy rates and to announce in late October its findings on dumping.

"The NBB Fair Trade Coalition will use every legal tool available to address these unfairly traded imports," says Anne Steckel of the trade group National Biodiesel Board (NBB).

Biodiesel was the first advanced biofuel, a category that includes cellulosic ethanol, to achieve commercial-size production, so the NBB is concerned by EPA's proposal to hold steady on the biodiesel and advanced biofuel mandates.

"This is only a proposal, and in the past, EPA's final numbers have been higher," says Steckel.

About 28% of U.S. soy oil is used in biodiesel. EPA says 4% of every gallon of diesel fuel comes from renewable sources.

The Washington Post

https://www.washingtonpost.com/politics/fbi-conducted-predawn-raid-of-former-trump-campaign-chairman-manaforts-home/2017/08/09/5879fa9c-7c45-11e7-9d08-b79f191668ed_story.html?utm_term=.30ca2144f588

FBI conducted predawn raid of former Trump campaign chairman Manafort's home

By Carol Leonnig, Tom Hamburger, and Rosalind Helderman

FBI agents raided the Alexandria home of President Trump's former campaign chairman late last month, using a search warrant to seize documents and other materials, according to

AMERICAN OVERSIGHT

people familiar with the special counsel investigation into Russian meddling in the 2016 election.

Federal agents appeared at Paul Manafort's home without advance warning in the predawn hours of July 26, the day after he met voluntarily with the staff for the Senate Intelligence Committee.

The search warrant was wide-ranging and FBI agents working with special counsel Robert S. Mueller III departed the home with various records. Jason Maloni, a spokesman for Manafort, confirmed that agents executed a warrant at one of the political consultant's homes and that Manafort cooperated with the search.

Manafort has been voluntarily producing documents to congressional committees investigating Russia's interference in the 2016 presidential election. The search warrant indicates investigators may have argued to a federal judge they had reason to believe Manafort could not be trusted to turn over all records in response to a grand jury subpoena.

It could also have been intended to send a message to President Trump's former campaign chairman that he should not expect gentle treatment or legal courtesies from Mueller's team.

The documents included materials Manafort had already provided to Congress, said people familiar with the search.

"If the FBI wanted the documents, they could just ask [Manafort] and he would have turned them over," said one adviser close to the White House.

Josh Stueve, spokesman for Mueller, declined to comment, as did Reginald Brown, an attorney for Manafort.

AMERICAN OVERSIGHT

"Mr. Manafort has consistently cooperated with law enforcement and other serious inquiries and did so on this occasion as well," said Maloni, the spokesman for Manafort.

Mueller has increased legal pressure on Manafort, consolidating under his authority a series of unrelated investigations into various aspects of Manafort's professional and personal life.

Manafort's allies fear that Mueller hopes to build a case against Manafort unrelated to the 2016 campaign, in hopes that the former campaign operative would provide information against others in Trump's inner circle in exchange for lessening his own legal exposure.

The significance of the records seized from Manafort's apartment is unclear.

Manafort has provided documents to both the Senate Judiciary Committee and the Senate and House intelligence committees. The documents are said to include notes Manafort took while attending a meeting with Donald Trump Jr. and a Russian lawyer at Trump Tower in June 2016.

Emails show Trump Jr. took the meeting and invited Manafort after he was promised the lawyer would deliver damaging information about Hillary Clinton as part of a Russian government effort to assist his father's campaign.

The Hill

http://thehill.com/policy/defense/345908-mattis-warns-north-korea-of-destruction-of-its-people

Mattis warns North Korea of 'destruction of its people'

By Ellen Mitchell, 8/9/17

Defense Secretary James Mattis warned North Korea in stark terms on Wednesday that it faces devastation if it does not end its pursuit of nuclear weapons.

AMERICAN OVERSIGHT

"The DPRK must choose to stop isolating itself and stand down its pursuit of nuclear weapons," Mattis said in a statement, referring to North Korea.

"The DPRK should cease any consideration of actions that would lead to the end of its regime and the destruction of its people."

Mattis's remarks follow bellicose comments from President Trump warning North Korea of "fire and fury" if it takes aggressive steps toward the United States.

The Washington Post reported on Tuesday that North Korea had obtained the capability of creating a nuclear warhead small enough to place on a missile.

Mattis's remarks could be part of a coordinated effort with the White House to send a tough signal to both North Korea and China, the reclusive country's main ally.

North Korea has responded to Trump's comments with its own tough rhetoric. On Tuesday, it suggested it could launch an attack on Guam.

Mattis makes note of Trump's involvement in the tense situation and writes that the president "was informed of the growing threat last December and on taking office his first orders to me emphasized the readiness of our ballistic missile defense and nuclear deterrent forces."

Secretary of State Rex Tillerson told reporters on Wednesday that Trump was seeking to send a "strong message" to North Korea that the United States was prepared to defend itself and its allies.

But Mattis made the point in much more direct language on Wednesday.

AMERICAN OVERSIGHT

"The United States and our allies have the demonstrated capabilities and unquestionable commitment to defend ourselves from an attack," he wrote.

"While our State Department is making every effort to resolve this global threat through diplomatic means, it must be noted that the combined allied militaries now possess the most precise, rehearsed and robust defensive and offensive capabilities on Earth," he said in the statement. "The DPRK regime's actions will continue to be grossly overmatched by ours and would lose any arms race or conflict it initiates."

North Korea would have the capability to devastate much of South Korea in any military exchange with the United States. This knowledge has been a deterrent on any use of force against Pyongyang.

Mattis's full statement:

"The United States and our allies have the demonstrated capabilities and unquestionable commitment to defend ourselves from an attack. Kim Jong Un should take heed of the United Nations Security Council's unified voice, and statements from governments the world over, who agree the DPRK poses a threat to global security and stability. The DPRK must choose to stop isolating itself and stand down its pursuit of nuclear weapons. The DPRK should cease any consideration of actions that would lead to the end of its regime and the destruction of its people.

"President Trump was informed of the growing threat last December and on taking office his first orders to me emphasized the readiness of our ballistic missile defense and nuclear deterrent forces. While our State Department is making every effort to resolve this global threat through diplomatic means, it must be noted that the combined allied militaries now possess the most precise, rehearsed and robust defensive and offensive capabilities on Earth. The DPRK regime's actions will continue to be grossly overmatched by ours and would lose any arms race or conflict

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

Detroit News: EPA chief wants to eradicate lead from drinking water

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

AMERICAN OVERSIGHT

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

National Morning News Highlights 03.21.18

Politico: Congress struggles to clinch spending deal

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown. Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties. There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

AMERICAN OVERSIGHT

Wall Street Journal: Trump to Ramp Up Trade Restraints on China

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said. The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion. But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

AMERICAN OVERSIGHT

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

AMERICAN OVERSIGHT

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

AMERICAN OVERSIGHT

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

The Detroit News

https://www.detroitnews.com/story/news/politics/2018/03/20/epa-pruitt-lead-water-flint/33125283/

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we

AMERICAN OVERSIGHT

ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

"It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

AMERICAN OVERSIGHT

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

AMERICAN OVERSIGHT

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis.

Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with

AMERICAN OVERSIGHT

the costs.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased

AMERICAN OVERSIGHT

regulation and funding.

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

AMERICAN OVERSIGHT

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Politico

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

AMERICAN OVERSIGHT

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: “I’m not real confident at this point.”

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

“Everything that remains is going to be pulling teeth to resolve,” said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

AMERICAN OVERSIGHT

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

AMERICAN OVERSIGHT

“Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

AMERICAN OVERSIGHT

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that sell grain to cooperatives at the expense of other companies. Though Senate Democrats and some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix

the so-called "grain glitch," it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

"We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI's background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there's [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

The Wall Street Journal

AMERICAN OVERSIGHT

https://www.wsj.com/articles/trump-to-ramp-up-trade-restraints-on-china-1521593091

Trump to Ramp Up Trade Restraints on China

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its

AMERICAN OVERSIGHT

market and eliminate practices that disadvantage foreign firms.

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by

AMERICAN OVERSIGHT

blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

AMERICAN OVERSIGHT

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

China Investment Corp, Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

AMERICAN OVERSIGHT

The administration's actions on China come on the heels of plans to levy tariffs on steel and aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

Detroit News: EPA chief wants to eradicate lead from drinking water

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

AMERICAN OVERSIGHT

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."

AMERICAN OVERSIGHT

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

AMERICAN OVERSIGHT

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

AMERICAN OVERSIGHT

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

AMERICAN OVERSIGHT

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

The Detroit News

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

AMERICAN OVERSIGHT

"It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

AMERICAN OVERSIGHT

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis.

AMERICAN OVERSIGHT

Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with the costs.

AMERICAN OVERSIGHT

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding.

AMERICAN OVERSIGHT

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

AMERICAN OVERSIGHT

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Politico

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

AMERICAN OVERSIGHT

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: “I’m not real confident at this point.”

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

“Everything that remains is going to be pulling teeth to resolve,” said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

AMERICAN OVERSIGHT

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

AMERICAN OVERSIGHT

“Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that sell grain to cooperatives at the expense of other companies. Though Senate Democrats and

AMERICAN OVERSIGHT

some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix

the so-called “grain glitch,” it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

“We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI’s background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there‘s [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

The Wall Street Journal

AMERICAN OVERSIGHT

https://www.wsj.com/articles/trump-to-ramp-up-trade-restraints-on-china-1521593091

Trump to Ramp Up Trade Restraints on China

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its market and eliminate practices that disadvantage foreign firms.

AMERICAN OVERSIGHT

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is

AMERICAN OVERSIGHT

looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

AMERICAN OVERSIGHT

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

China Investment Corp, Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

The administration's actions on China come on the heels of plans to levy tariffs on steel and

AMERICAN OVERSIGHT

aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

Detroit News: EPA chief wants to eradicate lead from drinking water

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

AMERICAN OVERSIGHT

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

National Morning News Highlights 03.21.18

Politico: Congress struggles to clinch spending deal

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown. Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties. There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

AMERICAN OVERSIGHT

Wall Street Journal: Trump to Ramp Up Trade Restraints on China

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said. The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion. But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken

AMERICAN OVERSIGHT

historically and still have issues today in 2018."

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

AMERICAN OVERSIGHT

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

AMERICAN OVERSIGHT

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

AMERICAN OVERSIGHT

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking

AMERICAN OVERSIGHT

water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

"It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

AMERICAN OVERSIGHT

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and

AMERICAN OVERSIGHT

City officials to address the ongoing lead crisis.

Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with the costs.

AMERICAN OVERSIGHT

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding.

AMERICAN OVERSIGHT

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

AMERICAN OVERSIGHT

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

AMERICAN OVERSIGHT

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: “I’m not real confident at this point.”

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

“Everything that remains is going to be pulling teeth to resolve,” said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

AMERICAN OVERSIGHT

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

AMERICAN OVERSIGHT

“Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that

AMERICAN OVERSIGHT

sell grain to cooperatives at the expense of other companies. Though Senate Democrats and some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix

the so-called “grain glitch,” it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

“We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI’s background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there‘s [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

Trump to Ramp Up Trade Restraints on China

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its

AMERICAN OVERSIGHT

market and eliminate practices that disadvantage foreign firms.

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by

AMERICAN OVERSIGHT

blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

AMERICAN OVERSIGHT

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

China Investment Corp, Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

AMERICAN OVERSIGHT

The administration's actions on China come on the heels of plans to levy tariffs on steel and aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

Detroit News: EPA chief wants to eradicate lead from drinking water

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to

AMERICAN OVERSIGHT

protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed

AMERICAN OVERSIGHT

mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created

AMERICAN OVERSIGHT

in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

AMERICAN OVERSIGHT

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of

AMERICAN OVERSIGHT

the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

The Detroit News

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

"It can be achieved. Some of the mental-acuity levels of our children are being impacted

AMERICAN OVERSIGHT

adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

AMERICAN OVERSIGHT

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis.

Asked whether federal intervention is needed to protect New York children and tenants from

AMERICAN OVERSIGHT

lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with the costs.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking

AMERICAN OVERSIGHT

water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding.

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by

AMERICAN OVERSIGHT

missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

AMERICAN OVERSIGHT

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: "I'm not real confident at this point."

AMERICAN OVERSIGHT

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

“Everything that remains is going to be pulling teeth to resolve,” said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

AMERICAN OVERSIGHT

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

"Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

AMERICAN OVERSIGHT

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that sell grain to cooperatives at the expense of other companies. Though Senate Democrats and some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix

AMERICAN OVERSIGHT

the so-called “grain glitch,” it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

“We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI’s background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there‘s [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

The Wall Street Journal

https://www.wsj.com/articles/trump-to-ramp-up-trade-restraints-on-china-1521593091

Trump to Ramp Up Trade Restraints on China

AMERICAN OVERSIGHT

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its market and eliminate practices that disadvantage foreign firms.

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It

AMERICAN OVERSIGHT

plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

AMERICAN OVERSIGHT

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow

AMERICAN OVERSIGHT

Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

China Investment Corp¸ Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

The administration's actions on China come on the heels of plans to levy tariffs on steel and aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Subject: NPHS Hopes You Are Well

Jahan!
I'm sorry I missed your visit. I was having knee surgery that day, but I would have loved to talk with you. I hope you're well and enjoying Washington politics. It's always great to hear how former students, now adults (gosh, I'm old), are doing.

I must admit, I haven't taken a lot of time to look into what the EPA has been doing this past year. Prior to sending this email I found an article on politico that has your boss's name in the headline and looked interesting, so I quickly read it. It doesn't seem to put a very gracious light on him or the people he works with. What's your opinion on how the Tar Creek situation was handled? If you don't want to reply, I understand. No problem. I just read the article today and thought it might be interesting to ask you about it.

https://www.politico.com/magazine/story/2017/12/06/scott-pruitt-tar-creek-oklahoma-investigation-215854

Anyway, thanks for stopping by and I wish you the best of luck.

So. In this news release from the office of the Oklahoma State Auditor and Inspector, the elected auditor is making an accusation that the current EPA Administrator and former Oklahoma Attorney General "acted improperly" in a Superfund inquiry. Does Mr. Pruitt have a response? I'm writing this for our PM edition. If a response comes in later we'll do a separate, follow-up

AMERICAN OVERSIGHT

story.

AUDITOR: Let the Audit Speak for Itself

AMERICAN OVERSIGHT

At the State Auditor's Office, we focus on two primary matters – accountability and transparency. To achieve these two objectives, our work must be beyond reproach and the entanglement of politics.

Ours is a constitutionally-created, independent office with the principal purpose to examine and inspect whether public officials properly expended public funds.

The constitution names the State Auditor before the Attorney General. We are not agents of the Attorney General and we do not work for the Attorney General.

Our audits examine public records. We look at how public funds are spent. A finding of probable fraud, waste, or abuse is only stated when fully supported by financial records and other evidence.

The Special Investigative Audit of the Lead Impacted Communities Relocation Assistance Trust (LICRAT) was a review of public documents to determine if the LICRAT Board complied with state law in the expenditure of public funds. Special Audits differ from other types of audits because we are not required to conduct these audits in accordance with government auditing standards.

A Special Audit must be requested and conducted when financial mismanagement is believed to have occurred. The LICRAT Special Audit was initially sought by for U.S. Senator Tom Coburn. The only reason to involve the AG was because his office is one of five statutorily permitted ways to request a Special Audit. The audit was conducted on behalf of Oklahoma taxpayers.

The former attorney general acted improperly when he shared the contents of the audit report with the subject of the audit. The impropriety was further compounded when he refused to share the audit with the people who paid for it – the taxpayers of Oklahoma.

The LICRAT audit wasn't about Scott Pruitt, left-wing environmentalists, Andy Lester, or politics. As the State Auditor, I have taken the position that the people of our state

AMERICAN OVERSIGHT

deserve to know why the LICRAT Board spent over $3.6 million on a project when the cost could have been less than $600,000.

If, as Mr. Pruitt's spokesman stated, the audit was "shoddy," then release it so the public can make that determination. If, as Mr. Lester stated, the audit report determined "no direct evidence of a conspiracy against the state," then release the audit so the public can make that determination.

The State Auditor is the fact finder, not the prosecutor. The sole discretion to prosecute is always retained by the prosecutor.

The only issue here is when the prosecutor determines not to proceed – don't cover up the issue by withholding a public document, paid for with public funds, and conducted on behalf of the public.

Audits are complicated. Many times, fraud and embezzlement are complicated. Often audits are confusing to prosecutors who aren't confident they can sufficiently explain it to a jury in order to obtain a guilty verdict. As such, much white-collar crime goes unprosecuted.

I have confidence in the work product of our office, its people, and their professionalism. We stand by the courage of our convictions while others cast aspersions on the reputation and integrity of those who favor accountability and transparency.

Let the Audit Speak for itself.

NOTE: Oklahoma State Auditor Gary Jones doesn't issue many news releases. As auditor, he has consistently taken the position that an audit should speak for itself. Since taking office in 2011, Gary has issued 15 news releases, of which, four were about a specific audit.

Want to flag this story from the Tulsa World for you.

2013 EPA investigation found no wrong-doing by Tar Creek trust
The Tulsa World
February 12, 2018

http://www.tulsaworld.com/homepagelatest/epa-investigation-found-no-wrong-doing-by-tar-creek-trust/article_ae02def8-ffc0-558e-9d93-c427d2fc0c31.html

A federal investigator found no irregularities or law violations related to the handling of a contract to dismantle and remove buildings in the Tar Creek Superfund site in far northeastern Oklahoma, according to a little-seen 2013 report by the Environmental Protection Agency's Office of Inspector General.

"Extensive record reviews and interviews were conducted and did not disclose evidence to support the allegations," Special Agent Susan Chandler wrote in the OIG report, which has not been generally available to the public, although a redacted copy was obtained by a trust member in 2014 through a Freedom of Information Act request.

Separately, the Tulsa World obtained a copy through a third party. OIC officials confirmed its authenticity.

Chandler's conclusions were at odds with those apparently reached by the state auditor and inspector's office, which conducted an investigative audit of the Lead-Impacted Communities Relocation Assistance Trust, or LICRAT, over several years beginning in 2011.

The A&I audit has never been released, but public and private statements of those familiar with the document indicate it suggests mismanagement and possible criminal conduct related to the Tar Creek contract.

AMERICAN OVERSIGHT

Scott Pruitt, then Oklahoma's attorney general, ordered the audit sealed in 2015 after giving a portion of it to LICRAT's attorney, Andy Lester.

At the time, Pruitt said the audit unfairly made "unsubstantiated criminal allegations against private citizens."

This deepened a feud between Pruitt and Auditor and Inspector Gary Jones, who still insists the audit should be released to the public, and bristles at the suggestion it may have been poorly done.

"If the attorney general thinks the auditor and inspector's office did shoddy work, I'd think he'd want the public to see it," Jones said last week.

The audit and the Tar Creek project again became an issue last year when Pruitt, a sworn enemy of the EPA and ally of some of the nation's largest polluters during his years as Oklahoma's attorney general, was nominated to and subsequently became EPA administrator.

He is also a protege of, and possible successor to, U.S. Sen. Jim Inhofe, who was instrumental in setting up LICRAT and a foe of environmentalists.

Pruitt has thus become the subject of numerous investigations by journalists and environmental groups, with the emotionally charged and politically fraught Tar Creek saga a particularly appealing rock to look under. In November, Washington-based Campaign for Accountability sued to force the state audit's release.

The OIG report lists 15 allegations against LICRAT and project engineer Jack Dalrymple. Most deal with claims that Dalrymple and perhaps trust members conspired to rig the bidding process on a $3 million contract to remove and dispose of abandoned buildings and otherwise rehabilitate the Tar Creek site.

AMERICAN OVERSIGHT

Contacted Friday, Dalrymple said he, too, wants the A&I report released.

"I'm not afraid of that being released because the trust was just hard-working people who did the right thing," he said. "I can tell you every single person on that trust was honest and true."

The allegations, made in a 2012 qui tam lawsuit by Billy Freeman Jr. and Joe Crawford of Ottawa County, also included claims that the work was not done properly.

Chandler, in her report, found each claim without merit. She says the work was done satisfactorily, and notes the contract was for a lump sum, which made questions about how components of the contract were carried out irrelevant.

The suit was dismissed in October 2013, in large part on the basis of the OIG investigation.

Chandler's report, which is marked "restricted" and "for official use only," was apparently intended for internal use only. Its primary purpose was to determine whether the federal government should join in the qui tam lawsuit.

A qui tam suit is one brought by private citizens alleging fraud against the federal government under the False Claims Act. This particular suit was one of several actions taken by area residents upset with the handling of the Tar Creek operation.

Most complaints dealt with the buyout — offers too high or too low — but the state and federal investigations in question dealt solely with the removal and rehabilitation contract.

The OIG report says LICRAT made several missteps early in the process, and eventually turned the bidding over to what was then the state's Office of Central Services.

The portion of the A&I audit given Lester dealt with that stage of the investigation, but people familiar with the entire document, who agreed to speak only on background, say it outlines

AMERICAN OVERSIGHT

irregularities before and after Central Services took over.

Lester says those allegations are baseless.

The politics of the Tar Creek cleanup have always been complex. Besides the Pruitt angle, they involve the rivalry between Inhofe and his former colleague, Tom Coburn, whose staff indirectly initiated the state audit by bringing documents to Jones' office in 2011.

Jones sent the material to Pruitt, who returned it with a letter ordering an investigation.

"This is all because of politics," said Dalrymple, who for decades has been embroiled in lawsuits against the state and federal government over flooding in Ottawa County. "Nobody really cares about our little area. ... I guarantee you (the state is) not trying to protect me."

To: Press <Press@epa.gov>
Subject: POLITICO Magazine: Tar Creek, Oklahoma

Hi, I'm a contributing writer with POLITICO magazine. I'm requesting an interview with EPA administrator Scott Pruitt for an upcoming story. **My deadline is Tuesday, October 10**.

The story will be focusing on the EPA Superfund site at Tar Creek, Oklahoma, and the narrative would greatly benefit from Mr. Pruitt's input. There have been many suggestions coming from within the EPA and the White House that Tar Creek has been identified as an example of how Mr. Pruitt will approach Superfund sites across the country. In a January 2017 story for *Bloomberg BNA*, a few days before Mr. Pruitt was confirmed, a White House spokesperson cited a buyout program that took place at Tar Creek as an example of Pruitt's guiding philosophy: "national standards; neighborhood solutions." In August, senior advisor Kel Kelly was touring the site.

Given the prominence that Tar Creek — an EPA Superfund site since the 1980s — has recently taken on, I'd like to discuss Mr. Pruitt's views on the buyout program and overall job the EPA has done there.

Please let me know who I can reach out to directly within the Administrator's office regarding my request.

Thank you,

AMERICAN OVERSIGHT

AMERICAN OVERSIGHT

EPA administrator Scott Pruitt for an upcoming story. **My deadline is Tuesday, October 10**.

The story will be focusing on the EPA Superfund site at Tar Creek, Oklahoma, and the narrative would greatly benefit from Mr. Pruitt's input. There have been many suggestions coming from within the EPA and the White House that Tar Creek has been identified as an example of how Mr. Pruitt will approach Superfund sites across the country. In a January 2017 story for *Bloomberg BNA*, a few days before Mr. Pruitt was confirmed, a White House spokesperson cited a buyout program that took place at Tar Creek as an example of Pruitt's guiding philosophy: "national standards; neighborhood solutions." In August, senior advisor Kel Kelly was touring the site.

Given the prominence that Tar Creek — an EPA Superfund site since the 1980s — has recently taken on, I'd like to discuss Mr. Pruitt's views on the buyout program and overall job the EPA has done there.

Please let me know who I can reach out to directly within the Administrator's office regarding my request.

Thank you,

Malcolm Burnley

Hi Jahan and co.,

I'm just checking in to see if you received my request and if I can expect any comments for the story I'm working on? I hope to publish on Monday. I left messages on your cell, and the press/media relations office for the administrator.

Thanks,

Malcolm

On Thu, Apr 12, 2018 at 5:36 PM, Malcolm Burnley <Ex. 6 - Personal Privacy> wrote:

> Hi Jahan,
>
> I'm writing a story for POLITICO magazine that's following up on my feature from last December on Tar Creek. It'll be shorter, something of a news piece related to the news Monday that Oklahoma AG Mike Hunter released the audit report from the Tar Creek investigation that EPA Administrator Pruitt ordered years ago when he was AG.

AMERICAN OVERSIGHT

We want to publish this Monday, if not before.

I'm hoping to get answers to **four questions listed below**, circling back to my conversation with EPA Administrator Pruitt last November. Give me a call if you'd like to discuss — on or off record — on my cell: Ex. 6 - Personal Privacy anytime.

If I don't hear back from you by early tomorrow, I'll follow up with a call early tomorrow.

Refresher: In November, Administrator Pruitt explained his decision to not release the Tar Creek audit (back in 2015, during the time he was Oklahoma AG) to the public because

A) the audit didn't turn up sufficient evidence to pursue prosecution

B) As a result, he didn't want innocent people to be besmirched, to protect their names and reputations.

> His exact response was "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and as such, it was important to protect the individuals' reputation that were in that investigation."

Therefore, my questions:

1) How does administrator Pruitt respond to the assertion of state auditors, writing in the Tar Creek audit that was released on Monday, that the audit yielded "sufficient circumstantial evidence for additional investigation into a potential conspiracy against the state"?

2) If EPA Administrator Pruitt disagreed/disagrees with the supporting

AMERICAN OVERSIGHT

circumstantial evidence of a conspiracy that Jones enclosed, related to the assertion above, why did he? Was it the 2013 EPA OIG report that made him decide against Jones's findings that there was indeed evidence of conspiracy worthy of further investigation? And/or was it the arguments of attorney Andy Lester?

3) Does administrator Pruitt support AG Mike Hunter's decision to disclose the audit now after all these years?

4) Prior to Monday, did AG Mike Hunter notify administrator Pruitt that his office was going to the release the audit? If so, when?

Thanks,

Malcolm

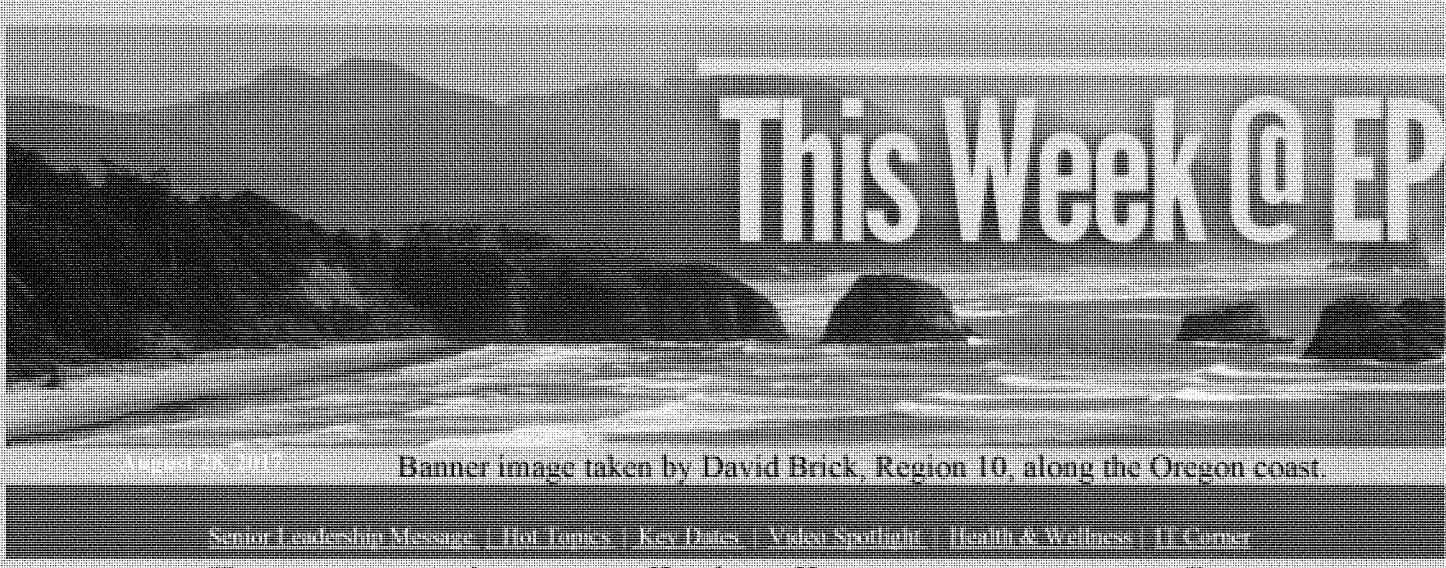
Subject: This Week @ EPA – August 28, 2017



*The agency is actively supporting **Hurricane Harvey** emergency response efforts.*

Be on the lookout for an update from Administrator Pruitt.

Senior Leader Message

Dear Colleagues,

As we approach the final month of Fiscal Year 2017, I want to spur your collective support to help the agency achieve its small business contracting goals. You may be aware that the U.S. Small Business Administration establishes small business goals with each federal agency in accordance with the Small Business Act. These goals recognize the critical role of small businesses in creating jobs, driving innovation, maintaining strong industrial assets, and growing the nation's economy.

AMERICAN OVERSIGHT

I am very proud of EPA's long and distinguished record of supporting small businesses. Your efforts to maximize small business contracting opportunities are the reason why this year's goals are within our reach. With just one month left in FY 2017, it's time to step-up those efforts even more.

The EPA's new Pilot Small Business Contracting Dashboard, which was recently launched to help offices track goal achievements, shows that the agency as a whole is currently achieving three out of the five established small business goals. Region 4 stands alone in the coveted position of achieving all five goals to date. Only the Office of Research and Development and Region 6 have met four of the five goals. Let's work together to follow the outstanding example of these offices and regions.

The Office of Small and Disadvantaged Business Utilization (OSDBU) provides small business expertise and can help you enhance your goal achievements. For assistance, call OSDBU's main line at 202-566-2075, or reach out to one of their Procurement Leads.

I am counting on your support for a strong FY 2017 finish. Boosting your efforts will help the agency achieve its goals, support our nation's small businesses, and strengthen the national economy.

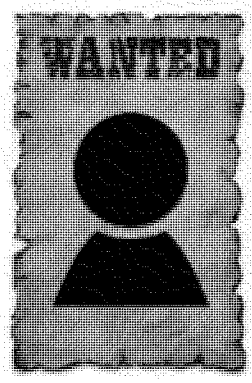
EPA's fugitives list grows

AMERICAN OVERSIGHT



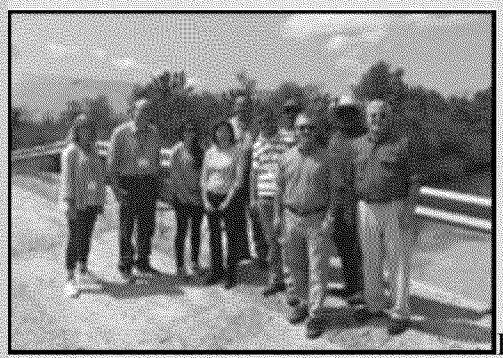
Did you know that EPA has a fugitives list? The list identifies defendants charged with environmental crimes or violations of federal environmental laws who have fled the court's jurisdiction or the United States rather than face prosecution or serve a sentence.

The latest addition to the EPA fugitives list is James Kenneth Ward, who is wanted on federal fraud charges connected with illegal disposal of radioactive waste in several North Dakota locations. He was indicted April 5, 2017, in federal district court in Montana and escaped custody of local officials during a prison transport in Wyoming in March 2013.

•□□□□□□□ For more information about Ward, read the press release.

•□□□□□□□ To learn more about other fugitives, visit the EPA Fugitives site.

Tribal Lands and Environment Forum training



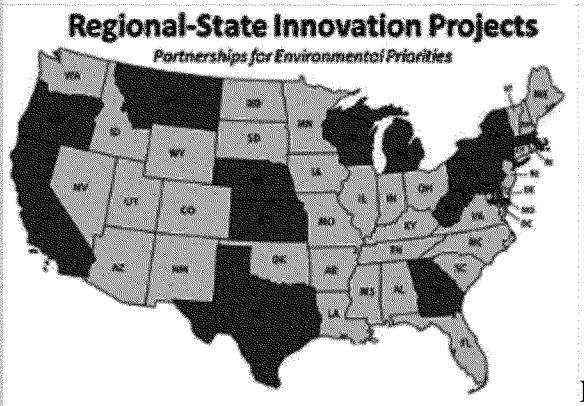
EPA co-sponsored the seventh annual Tribal Lands and Environment Forum (TLEF) training event in Tulsa, Oklahoma, on Aug. 14-17. The TLEF stems from a cooperative agreement between the Institute for Tribal Environmental Professionals (ITEP) located at Northern Arizona University (Exit) and EPA's Office of Land and Emergency Management and Office of Water.

AMERICAN OVERSIGHT

Approximately 450 tribal environmental professionals attended and participated in many of the 15 environmental training sessions. The event also included various breakout sessions, networking opportunities, and field trips. One of the field trip was a tour of the Quapaw Tribe's Tar Creek Superfund site.

EPA's TLEF participants included Ken Wagner (AO), Kell Kelly (AO), Jane Nishida (OITA), Sarah Grennwalt (AO), and Sam Coleman (R6).

Innovative research addresses environmental issues across country



EPA recently announced its selection of research projects addressing priority environmental and human health problems in 14 states across all 10 regions through partnerships between EPA's Office of Research and Development, regional offices, and states.

The research seeks to address pressing environmental issues facing the states. EPA is uniquely equipped to provide scientific expertise to help tackle these problems. The selected projects focus on a wide variety of issues from non-point source nitrogen pollution, volatile organic compound emission detection, harmful algal blooms, roadway air pollution near schools, and other environmental and human health issues across the country.

The projects will employ innovative approaches including citizen science, crowdsourcing, a challenge competition, and advanced monitoring technologies.

•□□□□□□□ Check out the list of selected projects.

•□□□□□□□ View the project map and details via the 2017 Regional/State Innovation Projects site.

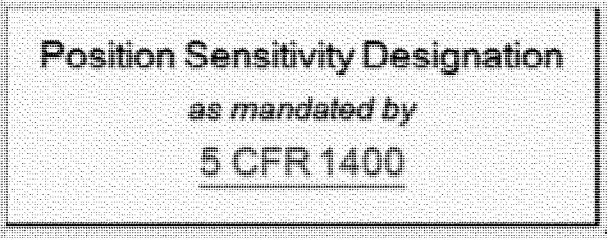
Position sensitivity designation



A government-wide security requirement (5 CFR 1400) mandates that agencies evaluate every employee's position to determine its sensitivity in relationship to the potential impact it could have on national security. Some positions may now be considered "National Security Sensitive" where they previously were not because "the occupant could bring about, by virtue of the nature and duties and responsibilities of the position, a material adverse effect on national security."

Supervisors will be responsible for determining the sensitivity levels for each of their direct reports using OPM's Position Risk Designation Tool.

Visit the 5 CFR 1400 Guides intranet site for more details.

Some believe Scott Pruitt is eyeing U.S. Senate campaign from his seat as EPA head

By: Randy Krehbiel, 8/9/17

Former Oklahoma Attorney General Scott Pruitt's foray into the federal bureaucracy as Environmental Protection Agency administrator doesn't seem to have diminished speculation that his ultimate goal is the U.S. Senate.

Although he remains mum about his long-range plans, Pruitt has long been seen as a potential successor to U.S. Sen. Jim Inhofe, who would be up for re-election in 2020, when he turns 86.

Inhofe has not said whether he'll seek another term, but he has always been very complementary of Pruitt and, publicly at least, seems to regard Pruitt as a worthy protege.

In a piece published Wednesday morning, Politico suggests some of Pruitt's EPA initiatives are regarded as political theater. His proposed televised debates on climate change are viewed with particular skepticism, according to the piece.

"The man's running for Senate (in 2020)," says David Bookbinder of the Niskanen Center, a libertarian-leaning policy institute that favors federal regulation of greenhouse gases. "Everything he says is calculated toward securing the Republican nomination in Oklahoma and then winning the general election there."

AMERICAN OVERSIGHT

Pruitt has been and continues to be the subject of intense scrutiny in Washington. Most recently, reporters have been reexamining Pruitt's handling five years ago of a state auditor and inspector's report on a trust created to administer relocation of residents in the area of Tar Creek in Ottawa County.

Pruitt, who was attorney general at the time, took the report to the state's multi-county grand jury, but no action was taken. Pruitt subsequently refused to release the report, saying he believed it might cast private citizens in an unfavorable light.

At the time, Auditor and Inspector Gary Jones, now a candidate for governor, disagreed with Pruitt.

More recently, as a result of Open Records Act requests for the audit, Jones' office asked current Attorney General Mike Hunter for guidance on the matter.

In a letter dated Aug. 3, Senior Deputy Attorney General Tom Gruber told Jones' office "this audit shall remain a confidential criminal investigatory file in the Office of the Attorney General and will not be released."

A long record in public office can be fertile ground for political foes. The Politico piece says that while Pruitt's energy allies want a more favorable regulatory environment, they don't necessarily want a showdown on environmental science, because that's a fight they could lose.

And if they lose, so does Scott Pruitt.

Communities Ready Task Force To Resist Pruitt Superfund Reform Effort

By Suzanne Yohannan, 7/13/17

Grassroots community groups are forming a task force to help them push back against EPA Administrator Scott Pruitt's efforts to reform the Superfund program, arguing that his endeavor raises significant concerns about curtailing cleanup oversight and planning to come up with alternative approaches to offer the administrator.

Pruitt's May 22 memo creating an internal agency task force to reexamine Superfund and recommend revisions "raises major concerns about decreasing cleanup oversight, privileging corporate interests over public health, and a lack of community involvement," says a July 12 email to community groups from Lois Gibbs, the long-time Superfund activist and founder of The Center for Health, Environment & Justice (CHEJ), the group leading the effort.

"The focus of Superfund cleanup must place public health as a priority, when weighed against private interests and money," the nascent task force says in a draft memorandum, signaling the task force plans to push for stricter cleanup requirements, limited flexibility for responsible parties and greater consultation with affected communities.

For example it is seeking to limit EPA's ability to avoid listing contaminated sites on the National Priorities List (NPL), limit the use of containment remedies, ensure public health remains a higher priority goal for cleanups than economic development, strengthen health studies at contaminated sites, and reinstate the expired Superfund taxes, among other measures.

AMERICAN OVERSIGHT

While details of Pruitt's plans are not available, many of the groups' calls are at odds with approaches that Pruitt is expected to adopt.

In the email, Gibbs says that the Trump administration and Pruitt "claim to desire to return Superfund cleanups 'to their rightful place at the center of the EPA's core mission,' however their actions speak differently: their proposed budget includes a 30% cut in funding to the Superfund."

"We aren't going to let him get away with this," she writes in the email.

She says organizers from communities around Superfund sites have coalesced to create the People's Task Force "to advocate our recommendations on the future of Superfund, based on our years of on-the-ground experience."

The People's Task Force recommendations include 20 initial signatory groups, including Center for Public Environmental Oversight, Edison Wetlands Association, Maryland Environmental Health Network, Tri-Valley Cares and others.

Several of the groups are located adjacent to Superfund sites, including LEAD Agency, Inc., which seeks to address the Tar Creek Superfund Site in Picher, OK; Citizens Against Toxic Exposure, which advocates on the Escambia Treating Company site in Pensacola, FL; Food & Water Watch, which works on the Gowanus Canal Superfund Site in Brooklyn, NY; and many others.

CHEJ is seeking additional signatures from environmental and political groups and local Superfund advocacy groups, the email says. The sign-on web page indicates CHEJ plans a media release soon, alluding to a possible news release on July 25.

CHEJ could not be reached at press time to respond to questions about the effort.

AMERICAN OVERSIGHT

Pruitt's Reforms

The new task force is seeking to influence Pruitt as he works to overhaul aspects of the Superfund program.

In his May 22 memo, Pruitt notes complaints of Superfund cleanups taking too long to commence and complete, and assigned an internal task force, led by banker Albert Kelly, to produce recommendations within 30 days on streamlining the Superfund program.

The memo called on the internal task force to make recommendations on "how the agency can restructure the cleanup process, realign incentives of all involved parties to promote expeditious remediation, reduce the burden on cooperating parties, incentivize parties to remediate sites, encourage private investment in cleanups and sites and promote the revitalization of properties across the country."

The EPA task force completed its work and Pruitt was expected to be briefed in late June **on the recommendations**, an informed source says.

Details have not emerged of those recommendations, but an EPA spokeswoman said July 13 that the agency “will have more information to share on the Superfund task force’s report soon.”

While details of EPA's plans are not available, Sen. Steve Daines (R-MT), who faces home state concerns over slow cleanups due to planned budget cuts, recently released an outline of recommendations for improving the program's implementation, including limiting the use of the NPL, prioritizing the program for funding and revising metrics for determining cleanup success, that could be viewed as a model for how EPA will proceed.

But the People’s Task Force's recommendations criticize aspects of Pruitt's May 22 memo and recent industry calls for certain Superfund changes.

AMERICAN OVERSIGHT

For example, they take issue with the memo's proposal to lower administrative and overhead costs, with the groups noting that such spending mainly funds enforcement and community involvement. "We strongly caution that these are not corners to be cut -- without proper oversight and public accountability, the Superfund would lose much of its remaining efficacy," the groups say.

In their recommendations, the groups that comprise the People's Task Force also express concern over industry proponents' calls for developing "exit strategies," which usually include removing sites from the NPL. They say proponents of that approach concurrently push for containment-type cleanup strategies rather than full removal or complete remediation required by law.

With such "Band-Aid" methods, "exit strategies will not be possible, as the sites require continual maintenance and monitoring," the groups say.

Therefore, these two industry goals are not compatible, they say. "If Responsible Parties want their sites to be delisted from the NPL, they must either pursue complete cleanup or accept the necessary continual oversight to ensure that toxic hazards are under control," they say.

They also question any potential expansion of the Superfund Alternative Approach (SAA) -- the approach advocated by Daines that entails the same cleanup process and standards but avoids an NPL listing.

PRP Benefits

But the community groups say while the SAA offers benefits to potentially responsible parties (PRPs), it impedes citizen participation that the Superfund program ordinarily provides.

For instance, under the alternative approach, PRPs, rather than EPA -- a neutral party -- award technical assistance grants, when provided, to communities. The approach allows PRPs to avoid the stigma of NPL listings as well as declaring a Superfund liability on financial documents -- which the groups say can have a significant impact particularly if a company is sold. The alternative approach also raises concerns over decreased community input and EPA oversight,

AMERICAN OVERSIGHT

they say.

The groups also question the memo's failure to list communities among the stakeholders with which EPA wants to improve interactions. "These communities have the right to information and input on these decisions upon which their health and welfare hinges," the groups say. "Economic development, while important to community revitalization, can never supersede public health."

They also call for reinstating the "polluters pay" tax under Superfund -- a long-time issue that has failed to gain any traction in Congress in recent years -- if the agency, as Pruitt says, is committed to restoring Superfund cleanups "to their rightful place at the center of the agency's core mission."

Further, they take aim at Pruitt's advocacy for using private investment and "alternative funding mechanisms" for the program. These "can't come close to compensating for the Superfund budget cuts and the high volume of abandoned sites," the groups say.

The groups also argue EPA transparency is key to improving relations between EPA and stakeholders. "Cleanup goals must be set in an explicit and interactive manner, beginning with the disclosure of all site information as soon as it is available," the recommendations say.

In her email on the task force, Gibbs notes that EPA under Pruitt "has been markedly secretive." She alleges, "unlike previous administrators, he has never made his schedule publicly available, ignores Freedom of Information Act requests, and has imposed silence upon the Administrative Office's phone line." He has also not disclosed details about the Superfund task force, such as who staffed it and its recommendations.

Subject: POLITICO's Morning Energy, presented by Chevron: In Pruitt era, if FOIAs fail, sue — What's next for carbon capture? — Trump to consider Pruitt, Perdue RFS proposal

By Kelsey Tamborrino | 02/26/2018 10:00 AM EDT

With help from Eric Wolff, Alex Guillén and Darius Dixon

IF ALL ELSE FAILS, SUE: EPA has experienced a surge in open records lawsuits following the inauguration of Donald Trump, a POLITICO review found. The lawsuits show a heightened sense of secrecy in the agency tasked with protecting the environment, as outside groups question the administrator's travels, meetings and policy decisions. Critics of the agency say the suits demonstrate just how far EPA is willing to go to flout FOIA under Scott Pruitt's tenure.

By the numbers: The lawsuits have come from a range of open government groups, environmentalists and even conservative organizations, Emily Holden reports, after they hit a wall trying to pry information out of Pruitt's agency. All told, plaintiffs have filed 55 public records lawsuits against EPA since Trump's inauguration, according to a review of a database of cases compiled by The FOIA Project, an initiative run by the Transactional Records Access Clearinghouse at Syracuse University. Forty-six of those lawsuits came in 2017 - making it the busiest calendar year by far, according to data stretching back to 1992. The second-busiest year was 2015, when plaintiffs filed 22 such suits against the agency, Emily reports. George W. Bush's EPA faced only 57 FOIA lawsuits during his entire presidency, according to the database's list of cases.

According to a separate data analysis that the Project on Government Oversight conducted for POLITICO, EPA has been especially slow to resolve information requests directed specifically at Pruitt's office. The data show that EPA has not started evaluating the vast majority of requests for information on Pruitt and has closed less than one-fifth of the requests directed at the administrator's office. From Jan. 20, 2017, to the end of last year, EPA received 11,431 FOIA requests, up about 17 percent compared with an equivalent period during Obama's last year in office, according to the analysis by POGO.

EPA spokeswoman Liz Bowman tells Emily the agency is focused on clearing a backlog of requests left over from previous administrations, while responding to "the large volume of incoming requests." EPA had more than 650 requests open from previous years as of early October and has since closed 60 percent of them, Bowman said. Read the full story here.

WHAT NOW? The surprise inclusion of a carbon capture and sequestration tax credit in the

AMERICAN OVERSIGHT

recent budget package has spurred optimism among its supporters, who ask how they can make a technological leap in the fight against climate change. But optimism aside, Pro's Anthony Adragna reports getting major new projects off the ground will likely remain a tough sell.

Sen. Heidi Heitkamp, who spearheaded the measure, is aiming to bring down the project costs of CCS technology, by allowing a broader group of facilities like factories and ethanol plants to claim the tax credit. Oil producers who use captured carbon for enhanced oil recovery will be eligible for a $35-per-ton tax credit, and anyone who permanently stores carbon underground can claim a $50 per ton. "Trust me, people are going to take advantage of this credit and, as a result, technology for carbon capture and sequestration and utilization is going to accelerate," she said. Heitkamp tapped a diverse array of allies ranging from climate hawks like Sheldon Whitehouse to pro-coal Republicans like John Barrasso and outside pro-business groups to overcome resistance from House Speaker Paul Ryan and House Ways and Means Chairman Kevin Brady.

Some critics see the credit as an unnecessary reward for fossil fuel companies whose climate benefits are counteracted by spurring additional oil production. The Natural Resources Defense Council, for example, has pulled out of the newly rebranded Carbon Capture Coalition, saying it does not support "subsidies for enhanced oil recovery." But Whitehouse said it was worth it to get Congress on the record about what a ton of carbon should cost. "Unfortunately, we had to build it into the tax code as a benefit rather than putting it in as a fee, which would be a much more economy-wide way to go, but I'll take that opening because now we're in the conversation about paying for carbon-free power," Whitehouse said. Read more.

TRUMP TO CONSIDER PRUITT, PERDUE RFS PROPOSAL: Pruitt and Agriculture Secretary Sonny Perdue will meet with Trump today to present a package of changes to the Renewable Fuel Standard to end tensions over the program between corn farmers and refiners. The two men will propose capping the price of biofuel credits (called Renewable Identification Numbers), a year-round waiver for the sale of 15 percent ethanol gasoline, the creation of credits for exported ethanol, and a transparency measure intended to cut Wall Street investors out of trading in the program. All of the proposals would be executed administratively, rather than legislatively. The pitch to Trump precedes a Tuesday meeting between the president and Sen. Chuck Grassley, Joni Ernst, Ted Cruz and Pat Toomey.

Basically the Cruz proposal: Cruz has been proposing the waiver-for-RIN-cap package for months now and getting nowhere with corn-staters. The addition of allowing credits for exports, which Pruitt floated and abandoned last year after an uproar from Gang Grain, seems unlikely to add to its appeal, though ethanol producers have expressed openness to the transparency measure. A refining source says the legal authority for some of these measures is "highly doubtful, but by the time the rule is final and then litigated, authors will be long gone from the scene. Think at least 2-2.5 years. God only knows what gyrations the market will endure in the interim."

Independent refiners are in: Another source says the proposals "would result in more predictability in the RINs market and in expanded biofuels sales and higher blends. That's the sort of win-win Cruz and Toomey seem to have been referring to. And this process seems not to

AMERICAN OVERSIGHT

require legislative action, therefore ensuring faster results."

Catching the president's eye: Ahead of the Tuesday meeting, Fuels America will launch a TV ad on "Fox & Friends" in the D.C. market starting today through Tuesday. The ad thanks Trump for his commitment to the RFS. Watch it here.

POWER TO THE STATES : Democratic governors across the U.S. are merging to fight back against administration policies they find hard to swallow, POLITICO's Edward-Isaac Dovere and Gabriel Debenedetti report. The 16 governors are looking to return power to the state-level on issues including climate and infrastructure, and they used this weekend's National Governors Association conference to boast of "pushback to damaging Trump policies." "We have a national administration that is not keeping with where the American people are, and when it becomes as evident as it is, then it's incumbent on people with half a brain to figure out a way around that," said Connecticut Gov. Dannel Malloy, a member of the Climate Alliance formed in the wake of Trump's pullout from the Paris climate agreement. Read more.

MEN AT WORK: House Natural Resources Chairman Rob Bishop took a bipartisan congressional delegation to Australia and New Zealand for energy and defense-related activities, a committee aide told Anthony on Friday. The lawmakers were there to look at energy activities in Australia and examine New Zealand's deregulation of its energy sector and learn about "the strategic importance of the two nations as a counterbalance to less-friendly powers in the Pacific," the aide said.

MURRAY-OLIVER CASE DISMISSED: A West Virginia judge dismissed the defamation lawsuit brought by coal magnate Bob Murray against HBO comedian John Oliver, following a June segment on Murray and his coal companies, where Oliver said Murray looked like a "geriatric Dr. Evil." The court said Murray's company failed to state a claim, according to a two-page ruling posted by The Hollywood Reporter. Murray's company told the Hill it plans to appeal the decision to West Virginia's Supreme Court "immediately."

SPEAKING OF COAL: Interior Secretary Ryan Zinke headed to Pennsylvania coal country this weekend to announce $300 million in grants to states and tribes to reclaim and repurpose abandoned mine lands. Picture here.

- Zinke also announced a $60 million cooperative agreement with the Recreational Boating and Fishing Foundation on Friday to retain and recruit recreational anglers and boaters of all ages. Zinke made the announcement prior to attending a "Saluting the Nation's Governors as Champions of the Great Outdoors" event, hosted by The Outdoor Recreation Roundtable and The Great Outdoors Month Council, according to Interior.

PRUITT PLAYS THE HITS AT CONSERVATIVE CONFAB: Pruitt largely stuck to his stump speech during a 20-minute Friday night headlining appearance at CPAC's Ronald Reagan dinner. He said the Obama administration "weaponized against certain sectors of our economy," especially coal; touted his deregulatory efforts; said America is "blessed" with natural resources to use; dinged the Obama administration for environmental disasters on its watch, like Gold King and Flint; blamed Obama for growing the Superfund list; and said Trump has "courage" and is

AMERICAN OVERSIGHT

about "getting results."

On WOTUS: Pruitt noted Trump assigned him to pull back on federal water jurisdiction, and alleged WOTUS was solely a power grab by the Obama administration unrelated to protecting water quality. He added: "Make no mistake about it. It's not about water quality, it's not about that. It truly is about power and jurisdiction and oversight that was being stretched so far." Pruitt got applause from the crowd when he mentioned the new version of WOTUS will be based on Justice Antonin Scalia's part of the Rapanos ruling.

He'll always have the Paris pullout: Asked what he was proudest of, Pruitt immediately mentioned getting the president to announce he will withdraw from the Paris climate accord. Trump "knocked it out of the park," Pruitt said.

Following the appearance at CPAC, Pruitt appeared on Fox News for a one-on-one interview with Jeanine Pirro discussing EPA's sue-and-settle policy, the end of the "war on coal" and the move to de-regulation. Watch here.

ZINKE 'OVER HIS SKIS': The White House was not pleased with a July 2017 GQ profile of Zinke, according to FOIA documents tweeted out by Huffington Post's Chris D'Angelo. According to an email from Andrew Hemming to a number of White House staffers - with the subject line, "Flagging - Zinke a bit out over his skis in a GQ interview" - the Cabinet communications staffer was concerned with a few "eyebrow-raising" answers given by Zinke. Among those were his statements that his Trump Tower meeting with the president-elect lasted "100 seconds" - and when Trump suggested he might tap him to head Veterans Affairs, Zinke quipped "I don't think you hate me that much." The White House contacted Interior about the interview, to which Interior drafted a statement that said the reporter of the profile had "selectively used quotes out of context to write a story that fit her pre-conceived narrative." See the thread here.

FERC ANOTHER DAY: The nation's electricity regulators were slated to appear in front of a House Energy and Commerce subcommittee this Thursday but the hearing was canceled late last week. The hearing was announced several weeks ago but was postponed due to "a change in the House schedule," a spokesman said. A new hearing date hasn't been setup yet. The House has canceled votes for Wednesday and Thursday when the late Rev. Billy Graham will lie in honor in the Capitol.

ABOUT ENERGYWIRE – The Transformation of the Energy Sector

Energywire is written and produced by the staff of E&E News. Energywire is designed to bring readers deep, broad and insightful coverage of the transformation of the energy sector. Energywire focuses on the business, environmental and political issues surrounding the rapidly expanding unconventional energy industry and the numerous factors -- from expanding natural gas use to renewables and more -- that are altering the traditional electric utility industry. Energywire publishes daily at 9:00 a.m.

Brad D. Schimel
Attorney General

June 19, 2017

The Honorable E. Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Ave., N.W.
Washington, DC 20460

Submitted via electronic mail

Re: Comments of the States of West Virginia, Wisconsin, Alabama, Alaska, Arkansas, Georgia, Indiana, Kansas, Louisiana, Michigan, Missouri, Nevada, North Dakota, Ohio, Oklahoma, South Carolina, South Dakota, Texas, and Utah, and the Commonwealth of Kentucky on the U.S. Environmental Protection Agency's request for comment on the definition of "waters of the United States."

Dear Administrator Pruitt:

As representatives of our States, we urge the Environmental Protection Agency ("EPA") to adopt a definition of "waters of the United States" under the Clean Water Act of 1972 ("CWA") that preserves the important role of the States in protecting the nation's water resources.

In 2015, the EPA and the U.S. Army Corps of Engineers (the "Corps") (collectively the "Agencies") adopted the WOTUS Rule, *see* "Clean Water Rule: Definition of 'Waters of the United States,'" 80 Fed. Reg. 37,054 (June 29, 2015), which came under immediate challenge. Thirty States, including the signatories of this letter, and other parties sought judicial review, resulting in orders from two federal courts staying implementation of the WOTUS Rule. The WOTUS Rule is unlawful because it conflicts with both the CWA's text and the U.S. Supreme Court precedent concerning the CWA and because it significantly impinges upon the States' traditional role as the primary regulators of land and water resources within their borders.

AMERICAN OVERSIGHT

EXT-18-783-F-002446

ED_001863D_00000120-00001

Now the Agencies have an opportunity to pursue a lawful rule that adheres to the text of the CWA and U.S. Supreme Court precedent. We are encouraged by EPA's outreach to state and local governments at this early stage in the process of replacing the Rule, and we urge EPA to continue to engage with States throughout the rulemaking process. We write to suggest how the Agencies can write a rule that respects Congress's instruction in the CWA to "recognize, preserve, and protect the primary responsibilities and rights of States . . . to plan the development and use . . . of land and water resources . . . ." 33 U.S.C. § 1251(b). In particular, we urge EPA and the Corps to adopt an approach consistent with Justice Scalia's plurality opinion in *Rapanos v. United States*, 547 U.S. 715 (2006), as urged by the President's recent executive order. Indeed, many of the undersigned States believe that Justice Scalia's plurality opinion identifies the outermost bound of permissible federal jurisdiction authorized by the statute, and many of the undersigned States would consider bringing another legal challenge against any regulatory definition of "waters of the United States" that exceeds the scope defined by Justice Scalia's plurality opinion. In the alternative, if EPA and the Corps wish to adopt an approach tailored to Justice Kennedy's *Rapanos* concurrence—which the States do not believe is necessary, and many States believe would be unlawful and plainly in excess of EPA's statutory jurisdiction—the States urge that any such approach should be carefully tailored to addressing the concerns that Justice Kennedy raised regarding federalism and the traditional authority of the States as principal regulators of waters within their borders.

I. Background

A. The Clean Water Act

The CWA provides that the Agencies have regulatory authority over "navigable waters," defined as "waters of the United States," 33 U.S.C. §§ 1344, 1362(7), which triggers numerous regulatory requirements. Any person who causes pollutant discharges into "waters of the United States" must obtain a permit under the section 402 National Pollutant Discharge Elimination System ("NPDES") program, *id.* § 1342, or under section 404 of the CWA for dredged or fill material, *id.* § 1344, subject to certain exclusions. "'The discharge of a pollutant' is defined broadly to include 'any addition of any pollutant to navigable waters from any point source,' and 'pollutant" is defined broadly to include not only traditional contaminants but also solids such as "dredged spoil, . . . rock, sand, [and] cellar dirt.'" *Rapanos v. United States*, 547 U.S. 715, 723 (2006) (plurality opinion) (citing 33 U.S.C. §§ 1362(12), 1362(6)). Obtaining a permit is an expensive process that can take years and cost tens of thousands of dollars. *See* 33 U.S.C. §§ 1342, 1344. Discharging into "waters of the United States" without a permit can subject a farmer or private homeowner to criminal and civil penalties, including fines of up to $51,570 per violation, per day. 33 U.S.C. §§ 1311, 1319, 1365; 74 Fed. Reg. 626, 627 (2009).

Federal jurisdiction under the CWA also imposes costs specially on the States. Some of those costs relate to permitting under the CWA. In forty-six States, it is the States and not the federal government that have primary NPDES permitting responsibilities under 33 U.S.C. § 1342(b). NPDES Program Authorizations, https://www.epa.gov/npdes/npdes-program-authorizations (last visited May 24, 2017). In addition, all States must create water quality

AMERICAN OVERSIGHT

standards for those "waters of the [United] Sta te[s]" within their borders, 33 U.S.C. § 1313, and States must issue water quality certifications for every federal permit that is issued by EPA or the Corps within their borders. *Id.* § 1341. Every two years, States also must report to EPA on the condition of those waters, *id.* § 1315, and if waters do not meet their designated standards, the States must develop detailed pollution diets for those waters and submit those diets to EPA for approval, *id.* § 1313(d).

Importantly, the States have robust programs to protect their own waters, regardless of whether those wa ters are regulated under the CWA. *See, e.g.*, N.D. Cent. Code §§ 61 -28-01 *et seq.*; Mont. Code Ann. §§ 75-5-101 *et seq.*; N.M. Stat. Ann. §§ 74-6-4 *et seq.*; Mo. Rev. Stat. §§ 644.006 *et seq.*; Ark. Code Ann. §§ 8-4-101 *et seq.*; Tex. Water Code §§ 26.001 *et seq.*; Ky. Rev. Stat. §§ 224.70-100 *et seq.*

B. Supreme Court Decisions Rejecting The Agencies' Overbroad Interpretations Of "Waters Of The United States"

Twice in the last sixteen years, the Supreme Court has rejected attempts by EPA and the Corps to extend their jurisdiction beyond the CWA. In *Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers*, 531 U.S. 159 (2001) ("*SWANCC*"), the Supreme Court rejected the Corps' asser tion of jurisdiction over waters "[w]hich are or would be used as habitat" by migratory birds. *Id.* at 164. The Court concluded that the CWA does not reach "nonnavigable, isolated, intrastate waters," such as seasonal ponds. *Id.* at 171. The Court explained that "federal jurisdiction over ponds and mudflats falling within the 'Migratory Bird Rule' would result in a significant impingement of the States' traditional and primary power over land and water use," *id.* at 174, and it required "a clear indication tha t Congress intended that result," *id.* at 172. But the Court found no clear statement authorizing the Corps' expansive view; to the contrary, "Congress chose to 'recognize, preserve, and protect the primary responsibilities and rights of States . . . to plan the development and use . . . of land and water resources . . . ." 33 U.S.C. § 1251(b).

Next, in *Rapanos*, the Supreme Court rejected the Corps' assertion of authority over intrastate wetlands that are not significantly connected to navigable -in-fact waters. The Court's majority consisted of a four -Justice plurality opinion written by Justice Scalia and Justice Kennedy's opinion concurring in the judgment.

Pointing to several sources for statutory construction, the plurality concluded that, "on its only plausible interpretation," CWA jurisdiction extends "only [to] those relatively permanent, standing or continuously flowing bodies of water 'forming geographic features' that are described in ordinary parlance as 'streams[,] . . . oceans, rivers, [and] l akes,'" *Rapanos*, 547 U.S. at 739 (Scalia, J., plurality) (quoting *Webster's New International Dictionary* 2882 (2d ed. 1954)), and "wetlands with a continuous surface connection to" those waters, *id.* at 742. Specifically, the plurality based this conclusion on "[t]he only natural definition of the term 'waters,' [the Court's] prior and subsequent judicial constructions of it, clear evidence from other provisions of the statute, and th[e] Court's canons of construction." *Id.* at 731.

AMERICAN OVERSIGHT

In his separate opinion, Justice Kennedy also rejected the Corps' broad assertion of authority but on a different ground, stating that the Agencies only have authority over waters that are navigable-in-fact and waters with a "significant nexus" to such navigable waters. 547 U.S. at 779 (Kennedy, J., concurring in the judgment) (citing *United States v. Appalachian Power Co.*, 311 U.S. 377, 407–08 (1940)). On Justice Kennedy's analysis, a water has a "significant nexus" if it "significantly affect[s] the chemical, physical, and biological integrity of" a navigable water. *Id.* at 779–80. Accordingly, Justice Kennedy rejected jurisdiction over all "wetlands (however remote)" or all "continuously flowing stream[s] (however small)." *Id.* at 776; *see also id.* at 769 ("merest trickle, [even] if continuous" is insufficient." *Id.* at 780. Justice Kennedy explained that the Corps' approach "would permit federal regulation whenever wetlands lie alongside a ditch or drain, however remote and insubstantial, that eventually may flow into traditional navigable waters." *Id.* at 778.

In the years since *Rapanos*, the courts of appeals have disagreed over the controlling effect of the two opinions composing the majority. Under *Marks v. United States*, 430 U.S. 188 (1977), "[w]hen a fragmented Court decides a case[,] . . . the holding of the Court may be viewed as that position taken by those Members who concurred in the judgment on the narrowest grounds." *Id.* at 193 (citation omitted). In conducting the *Marks* analysis of *Rapanos*, the courts of appeals have reached different results. *Compare United States v. Donovan*, 661 F.3d 174, 176 (3d Cir. 2011) (holding the Agencies may assert jurisdiction over waters that satisfy either test), *United States v. Bailey*, 571 F.3d 791, 799 (8th Cir. 2009) (same), and *United States v. Johnson*, 467 F.3d 56, 66 (1st Cir. 2006) (same), *with United States v. Robison*, 505 F.3d 1208, 1221 (11th Cir. 2007) (holding Justice Kennedy's test governs), *N. Cal. River Watch v. City of Healdsburg*, 496 F.3d 993, 999–1000 (9th Cir. 2007) (same), and *United States v. Gerke Excavating, Inc.*, 464 F.3d 723, 724 (7th Cir. 2006) (same).

C. Two Federal Courts Block The WOTUS Rule As Unlawful And Harmful To The States

In June 2015, EPA and the U.S. Army Corps of Engineers ("Corps") (collectively "the Agencies") issued the final Clean Water Rule: Definition of "Waters of the United States" ("WOTUS Rule"), 80 Fed. Reg. 37,053 (June 29, 2015). The WOTUS Rule asserted sweeping jurisdiction over usually dry channels occasionally carrying "[t]he merest trickle[s]" into navigable waters. *Rapanos*, 547 U.S. at 769 (Kennedy, J., concurring in the judgment). The WOTUS Rule also covered waters merely because they are somewhat near such a dry channel and land features that connect to navigable waters only, if ever, after a once-in-a-century rainstorm.

Our States, among others, filed suit in various federal courts because the WOTUS Rule violates the CWA, the Administrative Procedure Act, and the U.S. Constitution. [1] The WOTUS

[1] *See Murray Energy Corp. v. EPA*, No. 15-3887 (and consolidated cases) (6th Cir.); *North Dakota v. EPA*, No. 3:15-cv-59 (D. N.D. filed June 29, 2015); *Ohio v. U.S. Army Corps of*

AMERICAN OVERSIGHT

Rule violates the CWA under either the *Rapanos* plurality or Justice Kennedy's concurrence. And even if the WOTUS Rule were not prohibited by the Supreme Court's clear directives, it is unlawful because it is not clearly permitted by the language of the CWA. As the Supreme Court held in *SWANCC*, federal regulation of vast numbers of local land and water features within the core state function requires a clear statement from Congress. Moreover, the Agencies adopted the WOTUS Rule in violation of the Administrative Procedure Act by adopting five distance-based components and one unduly narrow exclusion never even arguably presented in the Agencies' proposed rule and lacking record support. Finally, the WOTUS Rule violates the Constitution by intruding on the States' reserved authority under the Tenth Amendment and exceeding Congress's authority under the Commerce Clause.

Reflecting the strength of these challenges, the WOTUS Rule has been stayed by two federal courts. The day before the WOTUS Rule's effective date, the U.S. District Court for the District of North Dakota stayed implementation of the Rule in thirteen plaintiff-States pending judicial review of the Rule. *North Dakota v. U.S. EPA*, 127 F. Supp. 3d 1047 (D. N. D. 2015). Then on October 9, 2015, the U.S. Court of Appeals for the Sixth Circuit stayed implementation of the WOTUS Rule nationwide, finding that the Rule was likely unlawful. *In re EPA*, 803 F.3d 804 (6th Cir. 2015).[2]

D. The Executive Order Instructing the Agencies to Rescind or Revise the Rule and EPA's Plan to Implement the Executive Order.

In February 2017, the President issued an Executive Order instructing EPA and the Corps to review the WOTUS Rule and issue for notice and comment a proposed rule revising or rescinding the rule as appropriate. Exec. Order No. 13778, 82 Fed. Reg. 12,497 (Mar. 3, 2017). The Order further instructs the Agencies to consider interpreting the term "navigable waters" as defined in 33 U.S.C. § 1362(7) in the Clean Water Act consistent with the plurality opinion of Justice Antonin Scalia in *Rapanos v. United States*, 547 U.S. 715 (2006).

The Agencies have adopted a two-step approach for implementing the Executive Order. First, the Agencies intend to propose withdrawing the WOTUS Rule and re-promulgating the 1986 rule. Second, the Agencies will propose a new definition of "waters of the United States"

Eng'rs, No. 2:15-cv-2467 (S.D. Ohio filed June 29, 2015); *Texas v. EPA*, No. 3:15-cv-162 (S.D. Tex. filed June 29, 2015); *Georgia v. McCarthy*, No. 2:15-cv-79 (S.D. Ga. filed June 30, 2015); *Oklahoma v. EPA*, No. 4:15-cv-381 (N.D. Okla. filed July 8, 2015).

[2] The Sixth Circuit also decided that it had jurisdiction to consider challenges to the WOTUS Rule in the first instance under 33 U.S.C. § 1369(b)(1). *In re U.S. Dep't of Defense, U.S. E.P.A. Final Rule: Clean Water Rule: Definition of Waters of the U.S.*, 817 F.3d 261 (6th Cir. 2016). In September, 2016 the National Association of Manufacturers filed a petition for a writ of certiorari with the United States Supreme Court appealing that decision. The U.S. Supreme Court granted the petition. *Nat'l Ass'n of Mfrs. v. Dep't of Defense*, 137 S. Ct. 811 (Jan. 13, 2017). The case has not yet been scheduled for oral argument.

AMERICAN OVERSIGHT

consistent with Justice Scalia's *Rapanos* opinion. EPA has sought comment from state and local government on the federalism aspects of a new definition.

II. Discussion

As officials from States, we write to explain how the Agencies should define "waters of the United States" consistent with the role that States currently play in the management of land and water use.

As a threshold matter, we think there are good arguments that federal jurisdiction under the CWA extends only to navigable waters. The text of the CWA defines "navigable waters" as "waters of the United States." 33 U.S.C. § 1362(7). And "[f]or a century prior to the CWA, [the Supreme Court] had interpreted the phrase 'navigable waters of the United States' in the Act's predecessor statutes to refer to interstate waters that are 'navigable in fact' or readily susceptible of being rendered so." *Rapanos*, 547 U.S. at 723 (plurality opinion) (quoting *The Daniel Ball*, 10 Wall. 557, 563 (1871)). That reading also links federal jurisdiction under the CWA with Congress's constitutional authority to regulate commerce "among the several States," U.S. Const. art. I, § 8, cl. 3, which is conducted through navigable waterways.

However, in light of the Supreme Court's decision in *Rapanos*, it may be appropriate for the Agencies to look to the views of the Justices who made up the controlling majority in that case. As between the views expressed by those Justices, we urge the Agencies to adopt a rule defining "waters of the United States" in the manner identified in Justice Scalia's plurality opinion because that approach is more consistent with the text and purpose of the CWA. Indeed, as noted above, many of the undersigned States believe that the Agencies' jurisdiction to regulate "waters" extends no farther than Justice Scalia's plurality opinion in *Rapanos*, and those States likely would challenge any regulatory definition drawn from Justice Kennedy's concurrence in *Rapanos*. Alternatively, should the Agencies decide to take the approach of Justice Kennedy's concurrence, over the undersigned States' objections, we respectfully urge the Agencies to take into account the extent to which the States already protect land and water resources within their borders.

A. The Agencies Should Adopt the Scalia Plurality Test as Their Approach to CWA Jurisdiction.

The Agencies should base their approach on the *Rapanos* plurality because it better comports with the text of the CWA. Such a rule would provide for federal jurisdiction over "only those relatively permanent, standing, or continuously flowing bodies of water 'forming geographic features' that are described in ordinary parlance as 'streams[,] . . . oceans, rivers, [and] lakes,'" *Rapanos*, 547 U.S. at 739 (Scalia, J., plurality) and "wetlands with a continuous surface connection to" those waters, *id.* at 742 (Scalia, J., plurality). As the plurality explained, this conclusion follows from several sources of statutory construction.

AMERICAN OVERSIGHT

For example, the plurality focused on Congress's use of the term "the waters" —in particular, "[t]he use of the definite article ('the') and the plural number ('waters')." *Id.* at 732. This term refers "plainly" not to "water in general" but "more narrowly to water '[a]s found in streams and bodies forming geographical features such as oceans, rivers, [and] lakes." *Id.* at 732 (quoting Webster's New International Dictionary 2882 (2d ed. 1954)). The se are all "continuously present, fixed bodies of water ," and not "ordinarily dry channels through wh ich water occasionally or intermittently flows," such as "transitory puddles or ephemeral flows of water." *Id.* at 733.

In addition, the plurality determined that the CWA's use of the term "navigable waters" further confirmed that jurisdiction is limited t o "relatively *permanent* bodies of water." *Id.* at 734 (emphasis in original). That is because the CWA "adopted that traditional term from its predecessor statutes," and the "traditional understanding" of the term "navigable waters" included only "discrete *bodies* of water." *Id.*

The plurality also found "[m]ost significant of all" that the CWA itself categorizes channels that carry intermittent flows of water, such as pipes, ditches, channels, tunnels, conduits, and wells, as "point sources" and not "navigab le waters" *Id.* at 735. The plurality highlighted the CWA's definition of "discharge of a pollutant," which uses the terms "point sources and "navigable waters" as distinct categories. Under the statute, a "discharge of a pollutant" consists of "any additio n of any pollutant *to* navigable waters *from* any point source." As the plurality explained, this definition "would make little sense if the two categories" —point source and navigable waters—"were significantly overlapping." *Id.*

Finally, the plurality explained that even if there were ambiguity as to the meaning of "waters of the United States," the *SWANCC* clear statement rule would prohibit the Corps' interpretation. *Id.* at 737 –38. The extensive federal jurisdiction would allow t he federal government to exercise the "quintessential state and local power" of regulating "immense stretches of intrastate land." *See id.* at 738. The plurality explained that as in *SWANCC*, it would expect a clear statement from Congress authorizing such a n "intrusion into traditional state authority." *Id.*

The test that Justice Scalia 's plurality opinion proposed also forwards the CWA's purpose of "recogniz[ing], preserv[ing], and protect[ing] the primary responsibilities and rights of States . . . to plan the development and use . . . of land and water resources . . . ." 33 U.S.C. § 1251(b). This approach would preserve the role of the States as the primary regulators of land and water resources by allowing for federal jurisdiction over only relatively per manent bodies of water. The definition leaves within state control local non -navigable intrastate topographical features that most benefit from the "local policies 'more sensitive to the diverse needs of a heterogeneous society,'" *Bond v. United States* , 131 S. Ct. 2355, 2364 (2011) . Those features vary greatly across the country from dry arroyos in New Mexico to ephemeral drainages in Wyoming to swales in Ohio farmland to prairie potholes in North Dakota to thousands of square miles of Alaskan land that is frozen most of the year. The States take very seriously the task of

AMERICAN OVERSIGHT

preserving the land and water resources within their borders consistent with local needs and act accordingly to protect those resources.

B. If the Agencies Reach Waters Beyond the Plurality Test, They Should Carefully Consider the Extent to Which the States Already Protect Those Waters.

Though we believe the Agencies should adopt the plurality approach, we recognize that the Agencies may conclude that they want to rely upon Justice Kenn edy's concurrence. To be clear, we do not believe that the Agencies should do so , and many of the undersigned States likely would challenge such approach in Court . But should the Agencies nevertheless decide to follow such an approach, over the objections of the undersigned States, we urge them to carefully consider, at the very least, the extent to which States already fully protect these waters under state law and to build any approach around that understanding.

In particular, to the extent the Agencies extend jurisdiction under Justice Kennedy's approach, in order to remain true to that approach, they should do so only where the Agencies have determined that the State's permitting program has failed with respect to a particular body of water, such that *the water* would—unless subject to federal regulation —have a significant, detrimental effect on the "chemical, physic al, and biological integrity" of navigable waters. *Rapanos*, 547 U.S. at 780 (Kennedy, J., concurring). The reason for this approach is that regulation of non-navigable waters is *only* justified under Justice Kennedy's approach in order to *protect* navigable waters that are the subject of interest under the CWA. *Id.* If a state is *already* adequately protecting those non-navigable waters, such that there is no significant impact on the "chemical, physic al, and biological integrity" of navigable waters, no possible rationale for imposing federal regulatory control over that water exists.

In order to implement Justice Kennedy's approach rigorously and consist ent with the CWA's respect for s tate primacy over local water and land use planning, a three -step inquiry would be required to remain true to Justice Kennedy's appro ach. *First*, the Agencies should be required to make an initial determination that the State's permitting program has failed to regulate a water to such a degree that it would, unless subject to regulation under the CWA, "significantly affect the chemical, physical, and biological integrity of" navigable waters. That finding would consist of defining a water that the State has failed to protect. Then the Agencies would need to show that the State's failure to regulate that water significantly would affect the chemical, physical, and biological integrity of navigable waters, unless that water were made subject to CWA oversight. *Second*, the Agencies should be required to provide the State with the opportunity to challenge the determination through an administra tive process. Specifically, the State should have the right to file an administrative appeal and participate in a hearing on the matter. *Third*, the State should have the opportunity to file and complete an appeal of the decision by the Agency to a federal court before the designation would take effect.

Such an approach would at least begin to recognize important federalism principles. Again, the CWA was designed to "recognize, preserve, and protect the primary responsibilities and rights of States . . . to plan the development and use . . . of land and water resources . . . ." 33

AMERICAN OVERSIGHT

U.S.C. § 1251(b). Thi s approach would allow the States some flexibility to design state law in order to protect the water resources within their borders. It also would provide any State for which EPA attempts to designate certain waters an opportunity to explain to EPA why its regulatory program is sufficient to protect those waters and conte st EPA's determination that those waters significantly affect navigable waters. And it would allow the State to challenge such a determination in a federal court before the Agencies assert jurisdiction based on the determination. These important safeguards would go some way to protecting state interests against broad assertions of federal autho rity, such as those claimed in the WOTUS rule, that violate the CWA and impinge on the States' traditional aut hority over land and water use. Again, however, we believe that the plurality opinion in *Rapanos* establishes the outermost bound of permissible federal jurisdiction under the law.

* * *

We appreciate this opportunity to provide our views on this important matter to the Agencies. We encourage the Agencies to continue to engage with States and state agencies throughout the rulemaking process. We l ook forward to working with the Agencies in the future on these important issues for the citizens of our States.

Sincerely,

Patrick Morrisey

By Anthony Adragna | 12/07/2017 05:43 AM EDT

With help from Emily Holden, Eric Wolff and Alex Guillén

WELCOME TO CONGRESS, MR. PRUITT: EPA Administrator Scott Pruitt makes his long-awaited first appearance before a House Energy and Commerce subpanel this morning where he's expected to get grilled on a host of issues. The session will be broken into two segments — 10-11 a.m. and then 2 p.m. onwards — to allow Pruitt to attend a White House meeting on biofuels (more on that below). Look for E&C Environment Chairman John Shimkus to recognize the arrangement is "not ideal, but gives members maximum ability to personally question the administrator about the agency's mission" during his opening remarks.

What Republicans will say: Expect Chairman Greg Walden to press Pruitt on budget transparency and his plans to address staffing issues: "I expect that 'Back to Basics' is not an abdication of environmental protection, but rather a

AMERICAN OVERSIGHT

rededication to mastering the most fundamental aspects of EPA's mission," he'll say, according to prepared remarks glimpsed by ME. Shimkus said his questions could touch on a range of topics, including TSCA, brownfields, safe drinking water and the agency's staffing.

And Democrats? "We're all noticing the orientation toward the environment is completely different with respect to budgeting, with respect to climate change, potentially with respect to methane, particulates," Rep. Scott Peters, a subcommittee member, told ME. "So, I just think we want to get a sense of where he's going and how he'll measure success." The committee's top Democrat, Frank Pallone, wouldn't reveal what he intends to grill Pruitt about when ME caught up to him in the hall.

Pro's Alex Guillén's expectations for Pruitt's first Capitol Hill appearance in six months: "Lawmakers have probably built up some serious questions in that time, so we could see questioning on practically any issue before EPA: the Clean Power Plan repeal effort; the Waters of the U.S. rewrite; Superfund work; proposed budget cuts; Pruitt's decision earlier this year not to ban chlorpyrifos; and his increased security and travel. Pruitt's prepared testimony offers a standard overview of his EPA philosophy."

Rally time: Environmental and public health advocates, including the Union of Concerned Scientists, Sierra Club, Business Forward and the Alliance of Nurses for Healthy Environments, will rally outside Rayburn at 9:20 a.m. to draw attention to Pruitt's lagging enforcement efforts, spending habits and overhauls of science advisory panels. Ahead of the session, the Environmental Defense Fund updated their "Pruitt Playbook" and the Union of Concerned Scientists offers some suggested questions to ask.

If you go: The hearing kicks off at 10 a.m. in Rayburn 2123.

WHY PRUITT'S LEAVING: Sen. Ted Cruz has secured a meeting today at 11:30 a.m. with President Donald Trump and several Cabinet members, including Pruitt, for what he told ME is likely to be a "free-ranging discussion" about biofuels and the recent fights over the Renewable Fuel Standard. His message? "We need to find a solution that is a win-win. That is a win for corn farmers across the Midwest but at the same time is a win for blue-collar union members who work in refineries and right now are being bankrupted by a regulatory system that isn't working," the Texas Republican said. Other Senate Republicans are expected to attend as well (perhaps the ones who signed this letter). Remember Cruz still has a hold on Bill Northey's USDA's farm and conservation mission nomination, so watch to see if that's lifted as the most immediate outcome of the session.

Oilies only: Sen. Chuck Grassley wasn't invited to the meeting, his spokesman said, but not to worry: Grassley has said that a White House RFS meeting would

AMERICAN OVERSIGHT

be "a waste of time." And if there's one thing energy world knows now, it's that if you don't have Gang Grain, you got nothing.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and no one was able to name the Father Millet Cross national monument (which has since been transferred by Congress to a state park) as our nation's smallest at just 0.0074 acres when designated. For today: Which state currently has the most national monuments at 18? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ARCTIC LEASE SALE FLOP: Despite touting the "largest ever" lease sale in the National Petroleum Reserve-Alaska, BLM received just bids on seven of the 900 tracts offered, Pro's Ben Lefebvre reports . Those bids, generating just $1.2 million in high bids, came jointly by ConocoPhillips and Anadarko for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per acre. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue. Leasing of state land did quite a bit better, according to the Anchorage Daily News.

For perspective: At the price of $14.99/acre, "leasing the entirety of the Arctic Refuge Coastal Plain's 1.5 million acres would raise slightly more than $11 million in revenue for the federal government, a far cry from the billion dollar lie that Trump and Republicans are feeding the American public," the Alaska Wilderness League's Kristen Miller said in a statement. Remember the Republican budget calls for Senate ENR to kick in $1 billion in revenue (which CBO said would come through ANWR drilling), though the lease results seem to bolster skepticism from environmental advocates and Democrats about those estimates.

Situational awareness: Energy Chairman Lisa Murkowski was named a tax conferee late Wednesday, along with Sens. Orrin Hatch, Mike Enzi, John Cornyn, John Thune, Rob Portman, Tim Scott and Pat Toomey . "With Congressman [Don Young] representing the House of Representatives on our energy provisions, Alaskans will have a very strong voice at the table to ensure this bill crosses the finish line," she said in a statement.

No (strategic petroleum) reservations: Count Shimkus, a tax conferee, among the backers of the Senate's approach of selling off 7 million barrels from the Strategic Petroleum Reserve as part of the final tax package H.R. 1 (115). "There was a reason to have the SPR," he told ME. "There is a credible reason to debate whether, for now and in the immediate future, there is a need." He also said he's a "big ANWR supporter" and that he doesn't see the Arctic drilling provision getting pulled from the final version.

AMERICAN OVERSIGHT

INHOFE, PRUITT'S TOXIC LEGACY: POLITICO Magazine's Malcolm Burnley takes a deep dive into the contaminated Oklahoma region of Tar Creek, an area so poisonous that only 10 holdouts live there, and he finds a buyout program for residents that left Sen. Jim Inhofe awash in scandal and litigation. Then-Attorney General Scott Pruitt ultimately concluded an audit into possible criminal wrongdoing didn't warrant charges and he shielded his review from public release, only to have some in the state believe his efforts were designed to spare Inhofe embarrassment. Many residents in the polluted zone of Tar Creek continue to express shock that no one was prosecuted over what happened in their federal buyout program

Pruitt and Inhofe flatly denied there was any political motivation in shielding the audit. "It was important to protect the individuals' reputation that were in that investigation," Pruitt said in an interview. "You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys." One interesting fact though: Ryan Jackson, now Pruitt's chief of staff, was once Inhofe's point person on the Tar Creek issue. Photo gallery here.

Pruitt's new gig: Trump named the EPA administrator to chair the Gulf Coast Ecosystem Restoration Council, a group formed after the Deepwater Horizon oil spill restore the ecosystems and economies of the Gulf Coast, your ME host reports. Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council.

MAY FERC NOW BE WHOLE: New FERC Chairman Kevin McIntyre will be sworn in today, bringing the five-member agency to full power, Pro's Eric Wolff reports. His swearing-in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes

MORE HEARINGS COMING ON CLEAN POWER PLAN: EPA announced Wednesday it would hold additional public hearings on its plan to repeal the Clean Power Plan in San Francisco; Gillette, Wyo.; and Kansas City, Mo., Pro's Emily Holden reports. Pruitt said the change was "due to the overwhelming response" and the agency will announce the dates and locations of the meetings in the coming weeks.

SPLIT OVER EXTENDERS? Ways and Means Chairman Kevin Brady told reporters Wednesday he doesn't like the idea of moving a package of extenders this year but hasn't made a final decision yet, Pro Tax's Brian Faler reports . "It's horrible policy and process," he said. But those comments come as Thune, the Senate's number three Republican, said lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs." Doing an extenders package as the chambers work to iron out differences between their broader tax bills is likely to test tax writers' bandwidth.

AMERICAN OVERSIGHT

Shutdown watch: Congressional leaders head to the White House for a meeting with Trump on government funding today, but GOP lawmakers expect to pass a two-week spending package despite internal division within their party, POLITICO's Rachael Bade and Sarah Ferris report. House Freedom Caucus leaders have been asking for a commitment GOP leadership does not believe it can give them: a promise to "hold the line" and refuse Senate Democrats' demands for increased spending on non-defense programs.

House Democrats, including Minority Whip Steny Hoyer, hold a press conference at 10 a.m. in Cannon 234 to call on Republicans to take up additional federal assistance for Puerto Rico and the U.S. Virgin Islands. Watch here.

ICYMI: Both sides framed their arguments at a hearing of the U.S. Trade Representative over whether to impose tariffs on solar equipment imports in language aimed at swaying Trump, Pro's Eric Wolff reports.

PATAGONIA SUES OVER BEARS EARS: A coalition of groups, including Patagonia, became the latest to file a lawsuit challenging the Trump administration's downsizing of Bears Ears National Monument on Monday. Link to the lawsuit filed in Washington federal court here.

ENDANGERMENT FINDING PUSHBACK STALLS: Conservative state lawmakers and businesses that are members of the American Legislative Exchange Council on Wednesday shot down an effort to urge Pruitt to challenge a science-based endangerment finding that requires EPA action on greenhouse gas emissions. "In subcommittee, a substantive conversation occurred where arguments were made for and against the draft model policy," said Bill Meierling, executive vice president of external relations for the group. "After debate, it was clear that neither the public nor the private sector supported the draft as written."

Meierling added that "ALEC members prefer to advance policy only after a consensus opinion has been reached." Reports suggested later the resolution had been pulled in the aftermath of strong opposition, including from Exxon Mobil. Pruitt was expected to speak at the ALEC meeting on Friday but canceled due to a "scheduling conflict," Meierling said.

NO COMMENT: Murkowski forcefully urged Sen. Al Franken to step down amid sexual harassment allegations on Wednesday, but a spokeswoman declined to state whether Roy Moore would be welcome on her committee if he wins the Alabama special election next week. "We aren't commenting until after the special election and decisions about committee seats are made by conference," she said. Outgoing Alabama Sen. Luther Strange currently has a slot on the energy panel.

THERE'S ALWAYS A TIE: Congressional Democrats said Tuesday they have evidence then-national security adviser Michael Flynn sent assurances to former

AMERICAN OVERSIGHT

business partners that a U.S.-Russia energy partnership in the Middle East, which reportedly would have included more than two dozen nuclear plants in the region, was "good to go," POLITICO's Kyle Cheney reports. The revelations from a whistleblower came in a letter released Tuesday.

MAIL CALL! LET'S BOOST EFFICIENCY CAPS! A collection of energy efficiency organizations, led by the Alliance to Save Energy, sent a letter to congressional appropriators on Wednesday urging them to boost "budget cap allocations for federal energy efficiency programs." Failure to do so could result in steep cuts to EPA and DOE programs across the board, the groups warn. Link here.

TAKE A GLANCE! LESSONS FROM THE RFS: The American Enterprise Institute is out with a report looking at policymaking lessons from the RFS. It argues the biofuels mandate would be better as a rate standard than a volume standard, EPA should issue multiyear rather than annual rules and that uncertainty should be explicitly incorporated into future rulemakings, among other things.

BAD SOLAR ACTORS: Campaign for Accountability released the results of a years-long investigation concluding two companies — Vivint and SolarCity — received more complaints about their sales tactics than others in the solar industry. "Unfortunately, the deceptive sales tactics of solar companies, like Vivint and SolarCity, are making rooftop solar a risky bet," Daniel Stevens, the group's executive director, said in a statement. Read it here.

DREAMS TURNED REALITY? The Center for Western Priorities is out with a report finding the Trump administration has already granted 13 of the energy industry's 24 top priorities. Read it here.

SUGGESTIONS GIVEN: American Council for Capital Formation released a paper this morning with ten ideas for improving the regulatory process. It's the product of a November 2016 roundtable with Sens. Mike Rounds, Angus King, James Lankford and others. Link here.

MOVER, SHAKER: Michael Boucher has joined Crowell & Moring LLP environment and natural resources practice as a partner in Washington. He joins from Dentons US LLP, where he led that firm's chemical, pesticide, and consumer product regulation team.

AMERICAN OVERSIGHT

Biofuel backers claim victory in EPA battle Back

By Eric Wolff | 10/20/2017 05:37 PM EDT

Biofuels backers were breathing a sigh of relief on Friday after EPA Administrator Scott Pruitt backed away from changes to the Renewable Fuels Standard, a reversal that left oil refiners frustrated.

Pruitt acceded to demands from Sen. Joni Ernst that he publicly promise not to pursue plans to change the biofuel program rules — changes that had been sought by oil refiners who have long complained about the costs of implementing the program that many see as a giveaway to the corn states.

Pruitt's letter to Ernst, Sen. Chuck Grassley and five other Midwestern Republican senators delivered what they'd asked for: A promise not to expand the group of companies required to comply with the program, to keep the biodiesel volume requirements at levels proposed in July, to not alter the policy that strips RFS credits from exported ethanol, and to explore allowing year-round sale of gasoline with 15 percent ethanol nationwide.

The quick reversal by Pruitt — at the direction of President Donald Trump — showed the influence of the biofuel lobby, corn growers and farm-state lawmakers to scuttle changes in the decade-old policy sought by the energy industry.

"This was a basket of bad ideas for biofuels," said Brooke Coleman, head of the industry lobby group Advanced Biofuels Business Council. "And there's no way that we could have any other response than to take this approach. [Pruitt] didn't kick tires on changing the RFS, he tried to take a baseball bat to the program, and the response was matching and in response to, from a magnitude perspective, to the initial foul."

The push by the senators, as well as Midwestern governors, "made a huge difference in this matter," said Michael McAdams, head of the Advanced Biofuels Association. "In addition, the collective unity of the entire biofuels industry, including those who distribute and market these fuels, made a significant impression on the importance and support for the RFS program."

But oil refiners who have said the high cost of biofuel credits, called Renewable Identification Numbers, was costing them hundreds of millions of dollars, lamented the power of the biofuels lobby and the corn-belt lawmakers.

"The [Pruitt] letter is a result of political pressure applied by Midwestern politicians," said one refining source. "Some Midwesterners cannot accept any premise that the RFS could be improved. As a result, their overreaction included

AMERICAN OVERSIGHT

everything from holds on confirmations to even more personal threats launched at the White House and EPA."

The unified and vociferous campaign by the biofuels industry in attacking the proposal that would have lowered biodiesel volume mandates surprised some in the refining industry, as well as the political staff in the EPA, sources tell POLITICO.

The Trump administration's embrace of the oil industry had raised refiners' hopes that it could have the best opportunity in years for significant RFS changes, and refining giant Valero Energy, along with a group of Pennsylvania companies, believed they would get relief from what they considered an onerous program.

But Grassley took to the Senate floor to blast Pruitt's biofuel plans as a "betrayal" of Trump's promises to protect ethanol, and he arranged a call with Trump and Pruitt that led to the meeting in his office with Pruitt and Ernst as well as Deb Fischer (Neb.), John Thune (S.D.), Ben Sasse (Neb.), Pat Roberts (Kan.) and Mike Rounds (S.D.). Following that meeting, Ernst demanded the public statement from Pruitt, and said she would withhold her support for Bill Wehrum, who was nominated to run the agency's air office, forcing a delay in the Environment and Public Works Committee's vote until next week.

Ernst spokeswoman Brook Hougeson told POLITICO, "Now that Sen. Ernst has received the assurances that the EPA will support the spirit and the letter of the RFS, she will support Mr. Wehrum."

Valero was disappointed its efforts to change the program had been shot down by the fierce political opposition.

"These senators have intervened in a regulatory process, and the proposals and concepts in the letter address RFS implementation problems to which these senators have offered no constructive solutions," Valero said in a statement. "The only unifying principle of their bullying opposition seems to be a desire to maintain the status quo at all costs and to protect windfall profits associated with unregulated trading of renewable identification numbers, or RINs. Their position advances neither the goals nor the efficient implementation of the RFS, and places U.S. manufacturing jobs at risk."

But in a statement, the White House made clear that Trump remained fully behind the biofuels program.

"President Donald J. Trump promised rural America that he would protect the Renewable Fuel Standard, and has never wavered from that promise," spokeswoman Kelly Love said in a statement. "The president has had constructive conversations with several key officials about the RFS over the past week, and he understands their concerns. The Trump administration will protect the RFS and

AMERICAN OVERSIGHT

ensure that our Nation's hardworking farmers continue to fuel America."

One energy executive said the biofuel backers were victorious because they were unified in their support for the RFS, while Republicans, the oil industry, and even the refiners were not on the same page.

"The ethanol boys won this round, no doubt, but at a pretty high cost," said Stephen Brown, vice president for federal government affairs for Andeavor. "The refining industry is anything but united on the RFS beyond a sunset as individual companies have each made investments and honed mitigation strategies to comply with the statute. As those investment decisions become increasingly operationally embedded, the industry will continue to splinter on the suite of RFS issues."

But some producers are still wary of Pruitt's pledge in his Thursday letter, and they note that he promised to release a final rule in which none of the mandatory volumes will be less than he proposed in July. For some producers, those volumes were already too low.

"There's some work to do here," Coleman said. "We won't know until the rule is done. And we recognize it's an ongoing rulemaking, it's not like they're going or republish the rule, they've said what they can say. The final rule really matters."

'Largest ever' Interior Alaska oil lease sale draws little interest Back

By Ben Lefebvre | 12/06/2017 08:26 PM EDT

The Interior Department received only seven bids from two companies today in what it had billed as the "largest ever" oil and gas lease sale in the National Petroleum Reserve in Alaska.

The bids on the 10.3 million unleased acres in the NPR-A generated just $1.2 million in high bids, according to a Bureau of Land Management summary. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue.

A BLM Alaska lease sale last year generated $18 million for 1.4 million acres offered.

Subsidiaries of ConocoPhillips and Anadarko were the only two companies that participated in the lease sale. The companies only bid for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per

AMERICAN OVERSIGHT

acre.

Low oil prices and the relatively cheap and plentiful land available for hydraulic fracturing in the lower 48 has hurt oil company interest in the out-of-the-way fields of Alaska and the Gulf of Mexico. Interior Secretary Ryan Zinke and Sen. Lisa Murkowski (R-Alaska) have pushed to open more public land to drilling, however, saying that doing so is important to increase domestic energy production.

Zinke had previously said that today's "large and unprecedented sale in Alaska will help achieve our goal of American Energy Dominance."

An Interior spokesperson did not immediately respond to questions.

WHAT'S NEXT: Republicans hope to keep ANWR drilling provisions in their budget proposal.

Democrats worry Arctic National Wildlife Refuge being lost amid tax debate
Back

By Ben Lefebvre | 11/29/2017 05:17 AM EDT

Democrats' fight to keep oil and gas rigs out of the Arctic National Wildlife Refuge is losing ground as the Republican tax plan advances — and it's almost as if no one has noticed.

The prospect of drilling in the untouched Alaskan tundra is as close to reality as it's been in more than a decade, with none of the political drama that in past decades turned the refuge's fate into a top-tier rallying cry for liberals. Legislation to allow drilling in ANWR is quietly hitching a ride on the tax code overhaul that Senate Republicans hope to complete by the end of the week, overshadowed by larger debates on whether the bill is a giveaway to rich people and corporations at the expense of the poor and working class.

"It's really not gotten the attention that it should," Sen. Tammy Duckworth (D-Ill.), a member of the Energy and Natural Resources Committee, told POLITICO about the ANWR provision. "It's not just the budget discussion. It's about everything else that's going on, the flurry of all sorts of other news."

Angus King (I-Maine) said Republicans were trying to shield ANWR from opposition by adding it to the larger bill rather than bringing it to the floor

AMERICAN OVERSIGHT

separately under rules, which would require it to win support from 60 senators to overcome a filibuster.

"Well, clearly the strategy is to try to get it through as part of this tax reform effort and thereby avoid a direct up-or-down vote," King said in an interview earlier this month.

The nonstop news cycle and preponderance of other concerns with the tax bill are making it difficult to focus on an issue that normally fires up Democratic voters.

"I do think that putting ANWR in the budget reconciliation package hasn't drawn as much extremist opposition because it is completely overshadowed by tax reform, which is the center of the package," said Chris Guith, senior vice president of the U.S. Chamber of Commerce's Global Energy Institute. "But there are some who aren't exactly supportive of tax reform that support ANWR, and it's possible to see ANWR bring a vote or two to help pass tax reform."

Senate Energy Chair Lisa Murkowski (R-Alaska) easily advanced legislation through her committee directing the Interior Department to hold two lease sales for drilling in ANWR over the next decade. It would raise $1 billion over that period, according to the Congressional Budget Office, making it eligible for inclusion in a budget reconciliation package that Democrats cannot filibuster.

The reconciliation package also will include Republicans' tax plan and a repeal of the Obamacare individual mandate. While Murkowski helped scuttle the Obamacare repeal push earlier this year, she says she supports ending the mandate. Murkowski's office did not respond to a request for comment.

ANWR, a swath of tundra on the northern Alaska coast, is home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years. Congress designated the 19 million-acre area a wildlife refuge in 1980, but it set aside a 1.5-million-acre parcel known as "10-02" for possible drilling if future lawmakers approved such a plan. The U.S. Geological Survey estimated in 1998 that part of ANWR could hold up to 12 billion barrels of oil, and President Donald Trump and Alaska Republicans have called it essential for their plans for American "energy dominance."

Sen. Susan Collins (R-Maine), who is undecided on the tax bill for a several reasons, said she will support an amendment on the Senate floor to eliminate the ANWR language, but she said success there is not a prerequisite for her to vote for the underlying bill. "No it is not, but I would certainly try to get it out of the package," Collins told reporters Tuesday. Collins was the only Republican to cross the aisle on an unsuccessful amendment to keep pro-drilling language out of the underlying budget resolution, meaning it is unlikely that she would be able to strip the ANWR provision from a reconciliation bill.

AMERICAN OVERSIGHT

But Democrats say that passing a deficit-increasing tax bill in order to open ANWR would actually harm energy-producing states. That's because the $1.5 trillion shortfall from the GOP tax cuts would trigger required "pay-as-you-go" cuts to mandatory spending programs, according to a CBO analysis sent to House Minority Whip Steny Hoyer (D-Md.).

One of the programs on the pay-go chopping block would be the energy royalty revenue sharing program carried out through the Mineral Leasing Act. Cutting those payments would lose Alaska an estimated $15 million in energy royalty payments next year alone, an amount important to a state already facing budget shortfalls.

"Communities throughout the West would be impacted by the loss of revenue, which is used to support a variety of needs including infrastructure, school funding, conservation, and recreation," Hoyer said in a statement to POLITICO. "This is yet another example of the consequences associated with forcing through legislation to add $1.5 trillion to the deficit in order to give tax cuts to the wealthy."

Pay-go cuts also would hit popular programs like Medicare and student loans, but Congress can waive the law with 60 votes in the Senate. Democrats are not yet on board with that approach.

The current push to open ANWR, coming amid a swarm of competing headlines and buried in larger legislation, has come nearer to succeeding than the GOP's two previous attempts. President Bill Clinton vetoed a budget package in 1995 that included language opening ANWR, while a Democratic filibuster thwarted a second attempt in 2005.

Environmental groups have targeted public engagement at only a handful of congressional districts. The League of Conservation Voters spent $550,000 on television ads in three Republican congressional districts. The LCV also paid for a bipartisan polling firm to probe public opinion on opening ANWR, but even that focused only on registered voters in eight congressional districts.

"The reason they're trying to sneak it into the tax package is they know they don't have the votes otherwise," said Tiernan Sittenfeld, the league's senior vice president of government affairs. "They know they can't pass it under regular order, that's why they're doing a sneak attack."

Even ANWR supporters are staying out of the spotlight.

"I haven't seen any full-out, front-page ads, nothing like that," Alaska Oil and Gas Association President Kara Moriarty said. "We're a little battle-weary, to be honest. Alaskans support opening up ANWR. There's been a few statements reiterating that."

The Environmental Scandal in Scott Pruitt's Backyard Back

By Malcolm Burnley | 12/06/2017 05:57 PM EDT

PICHER, Okla. — Tar Creek, Oklahoma, is breathtaking in a terrible way: At one time the world's deepest source of lead and zinc, the three-town region is now a cratered landscape so poisonous that no one, aside from 10 holdouts, can live there. Mountains of ashlike "chat," a toxic residue from lead-zinc milling, rise majestically among the remains of homes torn from their foundations. Abandoned pets forage around the ruins. A child's teddy bear lies sprawled in a ghostly living room. A gorilla statue fronts an empty high school, atop a sign proclaiming "1A Football State Champs, 1984."

Tar Creek is also part of the environmental legacy of one of the state's—and nation's—leading politicians, Senator Jim Inhofe, and his longtime ally, Scott Pruitt, the former Oklahoma attorney general who is now head of President Donald Trump's Environmental Protection Agency. After the EPA struggled to clean up the area, in 2006, Inhofe endorsed a plan in which a trust overseen by local citizens would use federal dollars to purchase homes and businesses in the toxic region so residents could move elsewhere. Then, when the plan proved so problematic that it spawned more than a half-dozen civil lawsuits and an audit into possible criminal wrongdoing, Pruitt, as the state's attorney general, invoked an exception to state freedom-of-information laws to keep the audit from being an open public record.

Now, that decision is coming into new light as many Oklahomans clamor for the audit to be released, suggesting that its revelations will prove embarrassing to Inhofe, who played a key role in designing the buyout plan, and cast doubt on Pruitt's decision not to move forward with charges. Last week, a Washington, D.C., nonprofit called the Campaign for Accountability raised the stakes even further, filing suit in Oklahoma courts to force the release of the audit.

"If you take a look at Scott Pruitt's record, you see a general disregard for transparency," said Daniel Stevens, the group's executive director. "I don't think it's outside our bounds to say that Pruitt is trying to hide evidence of criminal wrongdoing."

Pruitt, in an interview, dismissed the idea that he was covering anything up,

AMERICAN OVERSIGHT

saying his former office's grand jury unit reviewed the audit and determined that no charges were warranted. He said he declined to make it public because he didn't want innocent people to be besmirched, even though the auditor rejected that reasoning and maintained it should be a public document. "It was important to protect the individuals' reputation that were in that investigation," Pruitt said.

Nonetheless, the mess at Tar Creek continues to follow Pruitt in other ways. As EPA administrator, he has assumed full responsibility for the still-faltering cleanup. And eyebrows were raised in Oklahoma this past January when, as Pruitt was awaiting confirmation for his EPA post, a White House spokesperson told Bloomberg News that the handling of Tar Creek was emblematic of Pruitt's philosophy: "national standards, neighborhood solutions."

Pruitt, in an interview, said he knew nothing about the Bloomberg article, saying only that he endorses the EPA's current work at Tar Creek and the principle of combining federal resources and state and local leadership, rather than the buyout that occurred before his time as EPA administrator, while he was Oklahoma's attorney general.

"I think as far as a model going forward outside of the buyout, what we're trying to do is have a renewed focus on what I think are some of the most beneficial things we can do for citizens across the country, and that's to address some of these legacy sites that have substantial environmental challenges that allow them to once again enjoy the communities in their backyard," he said.

But many residents of the Tar Creek area, who gave up their homes in a buyout they considered both coercive and corrupt, continue to blame Pruitt for the fact that no one was prosecuted. They described a program so rife with good-old-boy corruption that certain individuals received outsize payoffs while some homeowners got so little they couldn't relocate anywhere nearby; meanwhile, they said, the people hired to demolish the homes received inflated contracts through a flawed process.

"We were lied to and deceived from Day One," said Gloria Workman, who said her son has learning disabilities from growing up in the polluted zone of Tar Creek, which had lead-poisoning levels in children that were three times higher than those registered in Flint, Michigan, during the peak of its recent water crisis. "Not only were we losing our homes, we were raped in the process."

"It was a nightmare," said Mary Thompson, who was still awaiting a resolution from the trust when an EF4 tornado ripped through Tar Creek in 2008, throwing bodies and trailers through the sky, killing six people and destroying more than 100 homes. Without homes, many people took lower-than-expected buyout offers—however insufficient they were perceived to be—because they had nothing left, she said.

AMERICAN OVERSIGHT

"They preyed on us after the tornado," said Thompson, whose home was leveled.

Nonetheless, Inhofe, in a 2015 news release touting the completion of the buyout, cast it as a success because it did not lead to an expanded federal role.

"This is an example of a government program created for a specific purpose and then dissolves after the job is completed," Inhofe proclaimed.

Now, he continues to defend it but sounds less celebratory. "The first thing to know about the Superfund site at Tar Creek is that it's what's called a 'mega-site' and that it is an exceptional circumstance in every way. You can't compare it to any other Superfund site in the country," Inhofe said in a statement to POLITICO. "The voluntary relocation assistance to get people out of harm's way was right for the situation at Tar Creek, but may not be for every other Superfund—that is why state and local partnership is critical."

To many former residents, who still want the investigative report by the state auditor to see the light of day, even these modest and conditional endorsements feel like slaps in the face.

"People hate the government out here, and it's because of things like this," said Aletha Redden, a lifelong resident of the area who has a Donald Trump bumper sticker on her pickup truck. "I want Scott Pruitt to know: This is not the model."

***

A flat expanse of dusty roads and scrubby vegetation situated in the heart of Tornado Alley, the Tar Creek area was once the mainstay of the Quapaw Tribe, which was forcibly relocated there by the U.S. government in 1834. At the time, the territory had little economic value, but a half-century later, prospectors discovered enormously rich ore. By the turn of the 20th century, companies broke ground with drill rigs on Quapaw land.

Many of those firms made fortunes, luring white settlers into an uneasy state of coexistence with the Quapaw. Tar Creek proved to be the deepest reservoir of lead-zinc ore in the world, producing a whopping $1 billion in minerals between 1908 and 1950, according to the Oklahoma Historical Society. Picher, the largest of the mining towns, swelled to a population of 14,000.

Almost every aspect of life in Tar Creek traced back to the mines. The high school took on the mascot of a gorilla, a reference to workers in the mines who broke up boulders with hammers. Children played in sandboxes filled with chat, the chalky mining debris. Teenagers earned the nickname "chat rats" for climbing up the pillowy piles of toxic rubble throughout town and rolling tires down their slopes.

AMERICAN OVERSIGHT

By the end of World War II, however, the boom was over. Most of the mining companies decamped for richer pastures. For the families left behind—including that of Yankees slugger Mickey Mantle, who grew up in the Tar Creek area in the 1940s—it was a slowly unfolding disaster. The extent of Tar Creek's collapse was reflected in the words of John F. Kennedy, who barnstormed into Joplin, Missouri—25 miles away from Tar Creek—in the closing days of the 1960 presidential campaign.

"My own judgment is I know no tougher occupation in the world that [sic] to be a miner, lead, zinc, coal. I am always glad to meet them because I think they live with peril," Kennedy declared. "They have as tough a life as there is. Every other one whose hand you shake has a finger off, a foot crushed, the chances of in 20 years their having a bad accident are more than any of the rest of us. And yet in this community and in West Virginia and Idaho and in other sections of the United States, there has been no group that has been harder hit, no group that has been more forgotten."

Indeed, after the last prospector looking for ore packed up and left in the mid-1970s, people looked to casinos and farming to make a living. But the residue from decades of mining was poisoning them. In 1979, acid mine water leached into the ground, threatening the area's aquifers, killing fish and turning creeks a rusty orange color. When the federal Superfund program—designed to clean up the nation's most polluted and contaminated land—kicked off in the early 1980s, Tar Creek was named to the inaugural National Priorities List. It's still on the list.

The EPA has spent more than $176 million over the past 25 years on cleanup work inside the 42-square-mile-area, on projects from plugging mine shafts to removing contaminated surface soil in people's yards. Though the amount of money sounds large, it hasn't been nearly enough to remove the toxic dangers, and many residents insist the cleanup was mishandled from the get-go. In some cases, the removal of soil resulted in sloping yards, which, during bouts of rain, caused flooding and mold inside houses. In 2000, the FBI raided the offices of the EPA's prime contractor at Tar Creek, Morrison-Knudsen. The company later settled a lawsuit brought by the federal government alleging false representation of billing and progress reports for a sum of $1 million. In the settlement, the company made no admission of wrongdoing.

Meanwhile, the environmental hazards began to multiply: Shortly after the start of that Superfund spending spree, in 1993, researchers at the University of Oklahoma found that 34 percent of Quapaw children were living with lead concentrations above the federal limit. Further studies found alarming rates of lead and arsenic in both the tribal and non-tribal populations. In 1997, a university-lead study estimated that 21 percent of children near Tar Creek had elevated blood-lead levels (defined as 10 micrograms per liter at the time), which is three times higher than the highest measurements found in Flint, Michigan, in 2015. The learning disabilities and memory loss that had plagued the schools and

AMERICAN OVERSIGHT

curtailed lifespans for decades suddenly had a culprit.

As the dangers became ever-more visible and the cleanup lagged, residents rallied around the idea that the government should quickly buy them out of their homes, rather than wait for the hazardous materials to be removed. They thought they might have an ally in the state's senior senator, Inhofe, a Republican who was chair of the Senate Environment and Public Works Committee. But Inhofe, who has a skepticism about environmental science that exceeds that of any of his colleagues, refused to consider the idea. "There will never be a buyout. I promise you that," Inhofe told the *Tulsa World* in late 2003.

Inhofe's refusal to take action of any sort was often criticized in local press, due in part to the relentless attacks of a young Democratic congressman named Brad Carson. "If you'd asked people in Oklahoma politics at the time, they'd say we were mortal enemies," said Carson, referring to himself and Inhofe. "I was elected [to Congress] in 2000, and my goal was to untie the Gordian knot. The area is desperately poor. If it was in suburban Tulsa or Oklahoma City, there would've been outrage."

In 2004, Governor Brad Henry signed a bill authorizing the use of state dollars for the relocation of roughly 100 families with children under the age of 6. Under pressure to take further action, the senior senator began to come around. At first, he secured $2 million in federal funding to pay for a study that discovered that 286 homes within Tar Creek were at risk of being swallowed up from cave-ins of underground mine shafts. This provided an opportunity for Inhofe to reverse himself on the buyout, supporting it on the grounds of protecting residents from cave-ins.

"The stability with the underground mine workings was worse than anyone had previously been thought," recalls Ed Keheley, a retired nuclear engineer and native of Picher who co-authored the study's final report. In the spring of 2006, Inhofe announced a joint federal and state buyout program that would begin with $20 million in funding, with the express purpose of relocating any and all people who'd voluntarily leave Tar Creek.

Having once opposed the buyout to his political detriment, Inhofe now used his clout to keep on funding it, but with the idea that decision-making would be concentrated among local leaders, not the federal government. With Inhofe's support, the Oklahoma legislature created a nine-member panel called the Lead Impacted Communities Relocation Assistance Trust to assume control over the project. The members were all volunteers, helping their community, but some had a vested interest in the buyout: They included, for example, a local banker whose institution would later give loans to people to help them relocate; local property owners whose own homes—and those of relatives—would be subject to the buyout; town officials; and a leader of the Quapaw Tribe.

AMERICAN OVERSIGHT

Inhofe cast himself in the role of the community's protector, putting out a 2008 campaign ad that declared: "Tar Creek: poisoned earth, the threat of schools and churches sinking into abandoned mines. Everyone thought it would be too much to tackle, except for one stubborn man named Inhofe."

But over a five-year period, the buyout would become the subject of a host of civil lawsuits and the subject of a state investigation.

***

The local members of the trust—few, if any, of them schooled in environmental management—had two major tasks: figuring out how much each property owner should be paid for their home or business, and then choosing a company to demolish the properties. Both tasks would become the subject of complaints about cronyism, with residents saying the trust members rewarded their friends and politically connected individuals.

It didn't help that the trust often met behind closed doors, and that the vice chairman of the trust resigned within a year. The trust's sole employee, operations manager Sonya Harris, also quit, declaring in her resignation letter that she could no longer continue "with a clear conscience without recommending a change; I will not place myself in a position to be perceived as approving of the operations to this point."

The first case to raise eyebrows involved the mayor of Picher, Ernest "Sam" Freeman. In 2005, when the buyout was first being discussed as a probability, he acquired three large parcels of former mining land covered with chat from the Picher Development Authority, which he chaired. Freeman bought them at 3 cents per square foot, for a total price of $2,088.50, according to the findings of a state audit at the time. It was, the audit declared, a violation of state laws forbidding members of public boards from entering into contracts with those boards. Ottawa County District Attorney Eddie Wyant called on Freeman to return the properties to the development authority in lieu of charges.

"If Sam wanted to buy that land, he needed to get off the board and purchase it legally," Wyant told a local newspaper at the time. "I am not one to put anyone in jail over this, but he needs to clear it up." Wyant, when reached by phone, declined to comment further.

Freeman returned the land, but, in a move that enraged some neighbors, profited off it anyway. The trust had decided that, because so much former mining land had been taken over by state authorities and tribal members, those who owned mobile homes or other shelters on land they didn't own would be eligible for buyouts. Freeman made a claim based on the fact that he had been maintaining and renting out homes on the chat-infested property for years before he tried to buy it.

AMERICAN OVERSIGHT

Trust documents show that Freeman received at least $274,000 from the buyout, more than half of which came from the same lots he had been ordered to return by law enforcement. (Freeman told POLITICO a payout of more than a quarter-million sounded accurate enough, though he declined to provide an exact figure.) Neighbors suspected cronyism. Freeman, who is no longer mayor, denied receiving any preferential treatment. "These people thought I bought the lots to make a killing in the buyout," he said. "I don't think I got more than anyone else would have."

The size of the mayor's profit diminished public confidence in the trust, just as it was engaged in the most delicate part of its task, figuring out how much to pay each individual property owner. Property owners were supposed to receive fair market prices as if pollution hadn't existed in Tar Creek, based on the sales of similar properties elsewhere in northeast Oklahoma. But those calculations appeared to lack uniformity.

The average payout for the 695 properties involved in the buyout was just over $65,000, but the disparity in prices between two properties could be dramatic. Residents complained about lowball offers on some decent properties and overly high payouts for others that were rundown or minuscule in size.

"I got $3,000 for my gun shop. It took me $16,000 to build it," said former Tar Creek resident John Frazier.

Wally Long said he and his wife got $35,000 for their Dairy Queen, while another Dairy Queen right up the road got substantially more.

"We were told [by the trust] that's all the money there is," Long said. "It bothered my wife a lot. She put 23 years of her life into this business."

Meanwhile, a trust member named Janell Trimble got $185,000 for her house, and her brother collected $115,000 for his fiberboard house.

"I may be a member of the [relocation trust's committee], but I honor my duties and I recuse myself when family members are involved," Trimble told the *Tulsa World* in 2008. "[B]ut as a buyout participant I also expect to be treated just like the next person."

Nonetheless, both Trimble and her brother received more than 35 percent above the average price per square foot. On the other end of the spectrum, an elderly woman named Betty Betts received an offer of $12,000 for her home; when she protested, the appraised value was raised to $20,000. Many people got so little for their homes that they had to turn around and take out loans in order to resettle elsewhere in Oklahoma. In the end, the trust finished up with millions in unspent funds.

AMERICAN OVERSIGHT

Residents concentrated their anger on the company that the trust hired to conduct the appraisals, Cinnabar, which had previously made headlines for its management of a noise-insulation program at the Tulsa Airport, which involved multiple lawsuits . In response, the trust engaged an "appraisal reviewer" to go back over Cinnabar's work. But the reviewer, a company named Van Tuyl Associates, quickly came under criticism as well. "They [often] didn't get out of their car. They never entered these homes," said Keheley, who was a member of the trust at the time. (Van Tuyl Associates is now defunct; its former president could not be reached for comment.)

When the unrest over the buyout made the local newspapers, the trust's leadership pointed to a 95 percent acceptance rate for buyout offers. But some residents accused trustees of pressuring them with "take it or leave it" offers, according to a class-action lawsuit brought against the trustees, Cinnabar and Van Tuyl by more than 250 residents affected by the buyout. Plaintiffs also complained that they were denied the right to view the appraisal paperwork. There was even a fake camera—and posters notifying residents they were being videotaped—in the room where buyout offers were made, an apparent attempt to compel residents to take the offers, according to documents in the suit.

The suit, filed in Oklahoma district court, accused the defendants of cheating average property owners and rewarding friends and associates of the trustees. Depositions revealed an explanation for some of the inconsistencies in appraisals: For certain properties, Cinnabar expanded the boundaries of where it could find "comparables"—properties in adjacent counties whose sale prices were used to calculate the appraisals—with the approval of a state employee named J.D. Strong, who, according to the lawsuit, played a significant role in overseeing the trust.

One of the properties appraised in this fashion was that of Trimble, whose $185,000 payout, according to appraisal documents, had infuriated other residents.

When, in 2008, residents outlined their frustrations in a scathing six-page letter to Inhofe, Henry and other elected officials, Strong dictated the governor's reply, which was co-signed by Inhofe, lawyers for the plaintiffs asserted in his deposition. "I may have drafted this," Strong responded, when presented with a copy of the letter saved on Strong's computer.

In an interview, Strong defended the trust and its system of appraisals: "We knew going in that we weren't going to be the most popular. We went in with the idea that we were going to be fair. I can honestly say that, looking back, we were fair and unbiased and frugal."

During the six years the lawsuit was making its way through the state court

AMERICAN OVERSIGHT

system, both Cinnabar and Van Tuyl Associates declared bankruptcy. Eventually, the plaintiffs and the trust settled the case in 2015 for $1.3 million, which, after deducting attorney fees, meant that each resident ended up receiving an additional $2,600.

But that didn't satisfy many property owners.

"The people of Tar Creek were treated like second-class citizens, based on where they were born and lived," concluded Wally Kennedy, a columnist at the *Joplin Globe* who reported on northeast Oklahoma, including Tar Creek, for more than 30 years. "For someone to portray the buyout of the people of Tar Creek as a successful program is lying through their teeth."

***

Once the trust obtained the properties on the toxic land, the next problem was how to destroy the empty structures that were on them.

Inhofe made sure there was enough money for the job. Even as he joined fellow Republicans in condemning President Barack Obama's 2009 stimulus bill as an unwarranted giveaway, the senior senator helped secure an additional $15.7 million in the bill to help the trust finish its work.

The trust hired a local businessman named Jack Dalrymple to oversee bids for the demolition contract. He was best known for organizing an annual deer hunt for paralyzed veterans, an endeavor that earned him a lifetime achievement award from a local Chamber of Commerce. His payment was to be 10 percent of the value of the winning bid. He formulated a scoring system to evaluate bids and, in March 2010, the trust awarded the contract to Stone's Backhoe, the most expensive of all four bids. At $2.1 million, it was nearly four times the cost of the lowest bidder.

Just 14 days after Stone's was declared the winner, it asked that the contract be reassigned to two subcontractors, CWF Enterprises, a carpet-cleaning business, and Vision Construction and Management. Former residents contend that there were longstanding ties between Dalrymple and the subcontractors. Whether or not they were friends before, they soon became hunting buddies. In October 2012, local coverage of Dalrymple's annual event for paralyzed veterans pictured the heads of the two firms setting up the flag for the hunt.

One of the losing contractors filed suit against the trust and individual trustees in Oklahoma district court, accusing them of violating the state's open-meeting act and competitive bidding act. The district county judge sided with the plaintiff, reopening the bidding process.

But rather than blame Dalrymple, the trust gave him a new contract. It included a

AMERICAN OVERSIGHT

flat rate for his services, $305,472—about $100,000 more than he would have received had the contract remained with Stone's.

In January 2011, a $1.7 million demolition contract was awarded to none other than CWF Enterprises, the carpet-cleaning business, which was also the least expensive of the three bids received. A month later, however, the estimated cost of the contract ballooned to $3,050,786—almost exactly 10 times what Dalrymple received in his new contract.

While many residents cried foul, Andy Lester, the trust's attorney, attributed the increase to the fact that the EPA-controlled repository for dumping debris had just closed down. Trekking the remains of the houses and businesses to a dumping ground further away caused the massive change order, and a near doubling of the contract.

Lester also defends the choice of Dalrymple to handle the bids, contending that he was an engineer with some prior experience with public contracts and that the trust members couldn't handle the process on their own.

"It is important to remember that the trust board consisted of nine members—including, for example, a physician, a school teacher, and a mushroom farmer. They were volunteers, not professionals at this kind of work," Lester said. "Jack Dalrymple is a professional engineer with significant experience. And candidly, there are very few professional engineers in northeast Oklahoma."

Nonetheless, lawyers out of the Tulsa region filed a lawsuit in 2012 under the False Claims Act that accused the trust members, Dalrymple and the heads of the companies hired to do demolition work of being part of a "good old boy network" and defrauding federal taxpayers.

Attorneys for the plaintiffs, Zach and Brad Barron, say the lawsuit fizzled when the Department of Justice took the stance that "the government didn't sustain damages" from the charges laid out in the complaint. In a false claims lawsuit, where the plaintiffs are effectively trying to recoup money that's owed to the government, a lack of willingness from the government is effectively a death knell, the Barrons said. The lawsuit was eventually dismissed.

In an interview, Dalrymple insisted the allegations of cronyism were entirely unfounded.

"There were a lot of emotions and feelings during that period," he said. "When you ask someone to leave their home, it's a tough thing. But ... there was nothing there."

***

AMERICAN OVERSIGHT

Still, the drumbeat of complaints continued, eventually reaching the ear of Jerry Morris, the state director for Oklahoma's then-junior senator, Republican Tom Coburn.

It was no secret that Coburn, a physician who cast himself as a political outsider, didn't look upon Inhofe with any sort of fond feelings of mentorship.

"I think they were often seen as having very different approaches to politics," said David Blatt of the Oklahoma Policy Institute. "Inhofe is seen as a classic, pork-barrel politician who'd bring federal dollars to Oklahoma, the more the merrier." Whereas Coburn, Blatt says, "hated that kind of politics and did as little of it as he possibly could. In fact, he spoke disdainfully and caustically about it the whole time he was in the Senate."

Coburn was not shy about stepping on his fellow Republican's toes. Morris forwarded a memo with a lengthy list of allegations related to the awarding of contracts in the Tar Creek buyout, especially regarding the demolition work, to then-Attorney General Pruitt. In April 2011, Pruitt asked the state auditor and inspector, Gary Jones, to look into the memoranda sent from Coburn's office.

"I have determined that these concerns are serious in nature such that an investigation of the matter is warranted," Pruitt wrote to Jones. A 17-point list of allegations for Jones to investigate followed, including whether there was collusion between Dalrymple and the contractors hired to do the demolition work.

After spending almost two years on the investigation, Jones turned over the results of the audit to the attorney general's office in January 2014, apparently believing it had uncovered important information.

For a year and a half, the attorney general sat on the findings. Then, in May 2015, Pruitt announced that he wouldn't press charges. In addition, he vowed to keep the audit secret by refusing to release it.

Jones fired back at the attorney general's office days later, penning a letter to Pruitt that described his rationale for withholding the audit as "baffling."

"To our knowledge, the individuals named in the report are members of a public trust or contractor whose services were retained as part of this substantive project," Jones wrote. Further, he contended, "our office has received no inquiries from you or your staff regarding the content of the audit report."

Pruitt justified the secrecy by comparing the investigation results to the findings of a grand jury. "Specifically, our office is concerned about publication of unsubstantiated criminal allegations against private citizens," Pruitt wrote in a 2015 statement.

AMERICAN OVERSIGHT

In an interview with POLITICO, Pruitt appeared to go one step further, suggesting the audit had in fact been vetted by a grand jury.

"You're addressing issues that it's been some months since I've looked into," Pruitt said. "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and, as such, it was important to protect the individuals' reputation that were in that investigation."

But when asked to clarify, a Pruitt staff member indicated that he was using the term "grand jury" as shorthand for the Multi-County Grand Jury Unit, a division of the AG's office, headed at the time by a Pruitt appointee, which decides whether to take cases to a grand jury for indictment.

It's not the same as a grand jury finding. Nonetheless, the attorney general's office, now overseen by Mike Hunter, Pruitt's former top deputy, has denied all open records requests for the audit, declaring it to be "under the supervision of the Multi-County Grand Jury Unit." A spokeswoman for the Oklahoma attorney general's office said that if there was in fact a grand jury, the office couldn't confirm or deny that.

These rationales befuddle open records experts.

"I don't think there's anything in the law that would prohibit it [the investigation] from being released," said Joey Senat of Oklahoma State University, the president of FOIA Oklahoma. "The law doesn't require that the audit be kept secret. What would its release be harming? They've closed the investigation and decided not to prosecute."

Jones, who is now running for governor, reiterated his call for the attorney general's office to release the audit, saying in a statement that "regarding any investigation of this kind, we always err on the side of transparency and the people of Oklahoma have a right to know."

Concluded Senat: "When you have the state auditor [Gary Jones] saying these are not unsubstantiated claims and this is a serious problem, good government would call for letting the public know what happened and showing the public the audit. Transparency helps alleviate a lot of concerns about favoritism, corruption, and incompetency—if those are indeed unfounded."

***

Tar Creek today looks like an abandoned landfill. Illegal dumping has added a fresh layer of grime to the already ruined patch of earth. Giant craters from collapsed mine shafts, some as large as 200 feet in diameter, are filled with Bud Light cans, shotgun shells and the tangled remains of kids' playground equipment.

AMERICAN OVERSIGHT

"We call this urban renewal, Picher style," quipped former resident Gloria Workman.

Abandoned houses that were not part of the buyout are now coated with graffiti. The charred remains of the former mining museum in Picher, which burned down at the hands of arsonists, stands as a teetering monument to Tar Creek's former way of life. And the sense of danger and destruction extends beyond the former buyout area: On rainy days, local fields used for football practice bleed a toxic shade of orange.

The EPA is continuing its now 33-year-old cleanup effort, and it's thrust the Quapaws back into stewardship of the land. Although the tribe leased away or sold off significant chunks of Tar Creek to mining companies throughout the 20th century, the Quapaws have at least temporarily regained control of all of it. Since 2012, the tribe—a sovereign nation with roughly 5,500 members—has been the primary EPA contractor for environmental remediation at Tar Creek. It's the first time any tribe has been a prime contractor on a Superfund site, assigning all the contracts and overseeing all the work.

"It's a great story," said Craig Kreman, assistant environmental director of the Quapaw tribe. "We're employing tribal members a lot of the time and members of the community. So that income [from the EPA contract] stays here in this community and is being spent in this community. We're not hiring a contractor out of Georgia."

Every day, a steady stream of trucks haul away more than 2,000 tons of soil saturated with cadmium, lead and other metals at the site. Each patch of earth requires years of passive soil treatments before it tests clean enough to plant row crops like winter wheat. Half-acre by half-acre, the hope is that Tar Creek can be put into productive agricultural use decades from now.

In August, after touring the abandoned area and surrounding towns, Pruitt's senior adviser Albert "Kell" Kelly, praised the EPA's efforts surrounding Tar Creek in sweeping terms: "People from all across the country count on the Superfund program to address pollution and revitalize their communities. Tar Creek cleanup is an excellent example of how the program should work. State and local partners, tribal partners, and EPA—all working together year after year to address historical pollution at this mega-site. It's cooperative federalism working at its best."

But many local observers, including Ed Keheley, aren't nearly as positive.

"Usually, the EPA comes in, they do their dirty work, sprinkle some wheat seed, take a picture to show Congress, and next year it looks like this," he said, pointing to a barren pasture. "Clearly, the EPA hasn't had the best interests of the people at heart. So I get personally offended when people like Scott Pruitt suggest

AMERICAN OVERSIGHT

otherwise."

For his part, Pruitt announced a fresh grant of $5 million to the Quapaw-led project last May, and he is quick to distance this experiment in local control from the one that preceded it.

"We [the EPA] can't impact the buyout. We didn't authorize the buyout. I didn't manage the buyout and its unique situation," Pruitt said. "I think what's most tangible is what we can do together with the tribe to advance and continue remediation."

When asked to respond to the undying complaints of residents in rural Ottawa County, where Tar Creek is located—a county in which Trump received 71 percent of the vote in November 2016—Pruitt changed the subject. "I had no experience with Tar Creek, to be honest with you," he said.

That's true, except it was his office's decision, when he was attorney general, not to prosecute the people accused of mishandling the trust money, Keheley and other local residents point out.

But what galls them more than the failure to prosecute is the failure to release the results of a government investigation—an audit that they believe will raise questions about Pruitt's unwillingness to press charges and cast a negative light on a project near and dear to Inhofe's heart.

Pruitt's connections to Inhofe are extensive. One of Pruitt's first hires as EPA chief was Ryan Jackson, a longtime Inhofe staffer and the senator's point person on Tar Creek, who is now Pruitt's chief of staff. He also brought on four other former aides to Inhofe, the Senate's leading proponent of the idea that man-made pollution contributing to climate change is a conspiracy and a hoax. Three of them are Pruitt's senior advisers on air, climate and legal issues.

"It gives me a level of comfort to know that we have a bureaucracy that's actually going to be serving instead of ruling," Inhofe told the *Washington Post*, applauding Pruitt for hiring his staff.

Numerous veteran Oklahoma political watchers, some of whom spoke to POLITICO on condition of anonymity, suggest that there may be an ulterior motive in Pruitt's embrace of Inhofe: It's widely believed that Pruitt, who is 49, wants to run for Inhofe's seat when the senator retires. Many observers think Inhofe is unlikely to seek reelection in 2020, when he'll be 85. And some have noted that Pruitt's decision not to advance the case against the buyout trust spared Inhofe the embarrassment of seeing the program he personally tailored and promoted go down in scandal.

"Pruitt is a rising Republican political star previously in Oklahoma and now

AMERICAN OVERSIGHT

nationally," said one journalist who closely follows the Oklahoma political scene. "There have been rumblings that Pruitt might have his eye on higher office. ... Pruitt would do everything to keep Inhofe close, assuming he wants to run for that seat."

Wally Kennedy, the *Joplin Globe* columnist who has covered the Tar Creek trust more closely than any other journalist, said, "My sense of the way that unfolded was that Pruitt decided he was not going to do any kind of prosecution, and then Inhofe writes a letter saying what an outstanding job the trust did. My reaction was 'Huh?'"

"The fact that the audit was not publicly disclosed tells me that somebody is hiding something," he added. "This is Oklahoma taxpayers' money being committed to ratting out what appears to be some apparent corruption. But everybody looks the other way. That's why I'm talking to you. Because if you can shed a light on this, maybe somebody will say 'We need to take a second look at this.'"

Pruitt, however, insists his decisions were strictly based on the law, and an Inhofe staffer flatly dismissed the possibility of Inhofe influencing Pruitt's decision.

"Senator Inhofe would have had no involvement in the case or in any of then-Attorney General Pruitt's decisions," the staffer said.

Pruitt was similarly bemused by the idea that there would have been any sort of political calculation behind his decision to shield the audit. The only politics in this case, he suggested, was on the part of those who want to embarrass him and Inhofe.

"You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys," Pruitt said in frustration.

Others argue that transparency in this case is not a political issue as much as a legal right.

"The open records act seems pretty clear this audit should be released," said Stevens, executive director of Campaign for Accountability. "You have to ask why he's not releasing it? Pruitt should have to be held accountable for this."

Pruitt named chair of Gulf Coast Ecosystem Restoration Council Back

AMERICAN OVERSIGHT

By Anthony Adragna | 12/06/2017 07:28 PM EDT

President Donald Trump announced today that EPA Administrator Scott Pruitt would chair the Gulf Coast Ecosystem Restoration Council.

The group, formed in 2012 after the Deepwater Horizon oil spill, helps restore the ecosystems and economies of the Gulf Coast. Pruitt was unanimously selected by Alabama, Florida, Louisiana, Mississippi and Texas, the five states on the council.

"I am honored to be selected by the states and look forward to working with the governors to continue the excellent work of this Council to further the critical mission of restoring the Gulf of Mexico ecosystem," he said in a statement.

Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council. He takes over the chairmanship from the Secretary of Agriculture.

WHAT'S NEXT: Pruitt begins his chairmanship of the group.

Powelson says McIntyre to be sworn in Thursday Back

By Eric Wolff | 12/06/2017 03:33 PM EDT

New FERC Chairman Kevin McIntyre will be sworn in on Thursday, FERC Commissioner Rob Powelson told an audience of electric power officials in Philadelphia today.

"At a general session this afternoon in Philadelphia, one of the key speakers was FERC Commissioner Rob Powelson, and during his speech this afternoon he confirmed that Kevin McIntyre will be sworn in tomorrow," PJM Interconnection spokeswoman Susan Buehler said.

President Donald Trump nominated McIntyre, a partner at the law firm of Jones Day, to be commissioner and designated him to be chair months ago. The Senate confirmed him in early November, and he received his signed commission just before Thanksgiving.

His swearing in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes. Chatterjee will miss that deadline by a day.

AMERICAN OVERSIGHT

It also puts McIntyre in charge of the process initiated by Energy Secretary Rick Perry that is aimed at supporting coal-fired and nuclear power plants in an effort to protect the power grid's resilience. Action on that proposal is expected by Monday.

EPA to hold more hearings on Clean Power Plan withdrawal Back

By Emily Holden | 12/06/2017 03:28 PM EDT

EPA will hold three additional public hearings on a proposal to withdraw the Clean Power Plan, in San Francisco; Gillette, Wyo.; and Kansas City, Mo., the agency announced today.

EPA Administrator Scott Pruitt in a press release said the change was "due to the overwhelming response" to two days of hearings in West Virginia last week. Many environmental advocates criticized EPA for initially scheduling hearings only in coal country.

The agency will announce the dates and locations of the meetings in the coming weeks, and speakers must register.

The Obama administration, by comparison, held public hearings on the proposed climate standards in 2015 in Pittsburgh, Denver, Atlanta and Washington, D.C.

WHAT'S NEXT: Comments on the draft withdrawal are due Jan. 16.

Republicans divided over taking up tax extenders this year Back

By Brian Faler | 12/06/2017 05:40 PM EDT

Republican leaders are divided over whether to take up a second tax-cut bill this year.

Senate Republicans want to move legislation reviving a rump group of tax "extenders," separate from their more sweeping plan to rewrite the code.

AMERICAN OVERSIGHT

But the House's top tax writer isn't so sure.

"I don't like the extenders," said House Ways and Means Chairman Kevin Brady (R-Texas). "It's horrible policy and process."

"No decision yet," he added, saying lawmakers need to talk it over.

His comments came after Sen. John Thune, the chamber's No. 3 Republican, said today lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs," including a tax credit to maintain short-line railroads.

Thirty-four temporary tax provisions expired at the end of last year, including 16 energy ones, and lawmakers are now facing demands to revive them. Some want to attach the provisions to funding legislation needed to keep the government open H.J. Res. 123 (115).

Many Republicans had sworn off the "extender" ritual after a 2015 tax agreement made many of the breaks permanent while giving others what lawmakers said was one final extension — which, for some, ended last year.

Putting together an extender bill, even as lawmakers negotiate a final compromise on their tax-overhaul plans, is likely to test tax writers' bandwidth.

Solar pitches target Trump at USTR hearing Back

By Eric Wolff | 12/06/2017 03:46 PM EDT

Supporters of tough trade tariffs on solar energy equipment and their opponents squared off again at a hearing of the U.S. Trade Representative today. with both sides coloring their arguments in language aimed at swaying the White House.

The two companies seeking tariffs on foreign shipments of solar panels and cells, Suniva and SolarWorld Americas, pressed the case that barriers were vital for protecting U.S. manufacturing of the clean energy technology because of its importance for national security — issues at the heart of President Donald Trump's "America First" agenda.

"A strong remedy is required to persevere the U.S. industry, provide breathing space for this American-invented manufacturing technology," said Matt Card,

AMERICAN OVERSIGHT

vice president of operations for bankrupt Suniva. "Anything less would ... result in the loss of this industry. That would have a dramatic negative impact on national security."

Witnesses at the hearing opposed to instituting tariffs raised the same issues, but contended that trade barriers would threaten other businesses, and that the benefits of tariffs would help only a narrow segment of the solar industry.

"Factories in South Carolina and across the nation would suffer from solar tariffs," South Carolina Gov. Henry McMaster told the panel. "While there is only one operating factory in the U.S. petitioning for these tariffs, there are over 50 American-owned factories employing thousands of people that would be the ones harmed, including a steel mill in South Carolina that provides American-made steel for many of the U.S. factories that produce metal equipment for the utility scale solar farms."

The panel, which included representatives from the departments of Energy, Treasury, State, Labor and Commerce, and from the Council of Economic Advisers, appeared unmoved by the national security arguments, and instead peppered parties with detailed questions about the potential tariffs' impacts on U.S. solar power demand. Panel members also questioned whether a few years of trade protections would be enough time for Suniva and SolarWorld to hike their production enough to catch up to overseas competition.

They pressed witnesses from both side on how tariffs would effect the domestic solar market, whether a modest tariff would be effective, and their opinions on the recommendations the U.S. International Trade Commission sent the White House last month. ITC members recommended a range of options, from sliding scale of tariffs to a cap on total shipments.

The Trade Representative will send the White House a recommendation, and Trump has until Jan. 26 to make a decision.

Subject: Morning Energy: Pruitt finally strikes out — EPA blocks formaldehyde warnings, sources say — Pruitt probe continues on

By Kelsey Tamborrino | 07/06/2018 05:42 AM EDT

With help from Emily Holden and Anthony Adragna

PRUITT FINALLY STRIKES OUT: Today marks Scott Pruitt's last day as EPA administrator after his resignation Thursday afternoon. Though he was only head of the EPA for 500 days, his tenure was marred by a seemingly endless stream of scandals into his ethics, finances and management. Pruitt's many issues have generated headlines for the past several months, and it was those "unrelenting attacks" on him and his family that he blamed in his resignation letter.

President Donald Trump announced Pruitt's exit in a tweet in which he commended the EPA chief for doing an "outstanding job" at EPA. Trump announced that Pruitt's deputy, Andrew Wheeler, will become acting administrator of the EPA until a permanent replacement can be found.

SO, WHAT HAPPENED? For weeks the White House has maintained it was concerned with the numerous allegations of wrongdoing by Pruitt, all the while affirming Trump still had faith in the administrator, particularly for his deregulatory zeal. But one Republican close to the White House said Thursday that Trump's support for Pruitt finally dropped when he realized Wheeler could easily carry out the same regulatory rollback — sans the scandals.

For Trump's part, he told reporters aboard Air Force One there was "no final straw," but said the decision had been in the works for "a couple of days." POLITICO's Anthony Adragna, Alex Guillén and Emily Holden report that among Trump's confidants, North Dakota billionaire oilman Harold Hamm was one of the few hold-outs left defending Pruitt.

The Washington Post reports Pruitt was also drawing scrutiny from the Office of Management and Budget. Officials told the Post OMB had determined that a $43,000 soundproof phone booth installed for Pruitt was a violation of federal law, though the report has not yet been published.

But the news still dismayed prominent GOP donor Doug Deason, who told POLITICO late Thursday that he was "so disappointed in the President's failure to support Scott against the angry attacks from the loony left." Deason added: "Nothing he did amounted to anything big. He was THE most effective cabinet member by far."

Inside the EPA, the general mood Thursday was one of joy, according to both career staffers and political appointees. "A lot of people are relieved it's going to stop," one EPA employee said. There were "a lot of jokes about, 'Like, what do we do with the tactical pants now?' A lot of sharing funny tweets we've seen out there. There was one that was like, 'For sale: Barely used secure phone booth. Very motivated seller.'"

AMERICAN OVERSIGHT

WHAT'S IT MEAN? The change-up at the EPA won't mark a large difference in the Trump administration's approach to environmental policy, and many of the investigations into Pruitt will continue on. But Wheeler, a longtime Washington lobbyist and former Hill staffer, is expected to steer the ship more smoothly. "I have no doubt and complete confidence he will continue the important deregulatory work that Scott Pruitt started while being a good steward of the environment," said GOP Sen. Jim Inhofe , for whom Wheeler formerly worked. "What changes is that Wheeler knows how to get things done at the agency and, in general, in Washington," a refining industry source told Pro's Eric Wolff over email.

In contrast to Pruitt, Eric and Alex write: "Wheeler is a smooth insider with a penchant for policy details and a reputation for working well with both friends and adversaries. But those who have dealt with him say he's on board with the broad deregulatory agenda that Pruitt and Trump have pursued."

Career EPA staffers were enthused but wary of Wheeler, who is known around the agency as friendly and competent, a skilled lawyer who knows how to bulletproof regulatory rollbacks, while avoiding the kind of controversy that has propelled Pruitt into the limelight. Wheeler is also expected to engage more with career staffers, rather than relying solely on a tight circle of political appointees, as Pruitt did. "Will this be a turn for the better or more of the same? ... I'd say we're not optimistic for much better," one person said. "You can't fix stupid by replacing Pruitt."

"[T]he proverbial fox hasn't left the henhouse," said Denise M. Morrison, acting head of AFGE Council 238, which represents about 9,000 EPA workers across the country. "Pruitt's blatant disregard for regulations mustn't be the standard for his former coal lobbyist successor at EPA, Deputy Administrator Andrew Wheeler."

The president said Wheeler was "very much an early Trump supporter," although some were quick to point out that Wheeler called Trump a "bully" in a Facebook post during the presidential primaries. In a statement to ME, Wheeler said he made those comments during his time on the Marco Rubio campaign. But Wheeler said that when he attended a Trump speech in June 2016, Trump gave "the most comprehensive energy speech by a presidential candidate" he'd ever heard. "I then joined the Trump campaign and worked on environmental policy for him," Wheeler added.

WHAT COMES NEXT? If Trump were to soon nominate a permanent replacement for Pruitt, the nominee will certainly face an uphill battle in the Senate, where a contentious agenda is already heating up in the lead-up until midterm elections. Senators on both sides of the aisle have condemned Pruitt's actions, and issues like the Renewable Fuel Standard would be front-and-center in any eventual hearing.

And, even with Pruitt gone, EPA will continue to be forced to release public records detailing how he has managed his agency. One longtime EPA employee said Pruitt's resignation was overdue and hoped that a criminal investigation would take place — and that he would be indicted. "Congress has seriously abdicated any pretense of oversight," the source said. "How many Benghazi hearings?"

MORE FROM THE SUPPRESSED STUDY BEAT: A draft health assessment of one of the most commonly used chemicals in the country is being suppressed by the Trump administration's EPA, current and former agency officials told POLITICO. The assessment details that most Americans inhale enough formaldehyde vapor in the course of their daily lives to put them at risk of developing leukemia and other ailments, Pro's Annie Snider reports. EPA scientists completed the formaldehyde assessment just before Trump took office, the officials tell Annie, arguing that top Pruitt advisers are delaying its release as part of a larger campaign to undermine the agency's independent research into the health risks of toxic chemicals. "They're stonewalling every step of the way," the current official said, accusing political appointees of interfering with the formaldehyde assessment and other reports on toxic chemicals produced by EPA's Integrated Risk Information System.

Pruitt told a Senate hearing earlier this year that he believed the draft assessment was complete — but five months later, it has yet to see the light of day. Meanwhile, internal documents show , a trade group representing businesses that could face new regulations and lawsuits if the study were released had frequent access to top EPA officials and pressed them to either keep it under wraps or change its findings. "As stated in our meeting, a premature release of a draft assessment ... will cause irreparable harm to the companies represented by the Panel and to the many companies and jobs that depend on the broad use of the chemical," Kimberly Wise White, a representative of the American Chemistry Council's Formaldehyde Panel, wrote in a Jan. 26 letter to top officials at EPA. Pruitt appointed White to EPA's influential Science Advisory Board last fall.

AMERICAN OVERSIGHT

And while Pruitt may be gone from the agency, his replacement also has a history with the chemical, Annie notes. He was staff director for the Senate Environment and Public Works Committee in 2004, when his boss, Inhofe, sought to delay an earlier iteration of the formaldehyde assessment. Read the story here.

IN THE MEANTIME: Aides on the House Oversight Committee say they'll continue their investigation into Pruitt, despite his exit, with Committee Democrats releasing new transcripts from interviews with some of Pruitt's aides on Thursday. Three aides acknowledged removing many meetings from Pruitt's calendars deemed "personal," including retroactively removing reference to a dinner with Cardinal George Pell after his arrest on alleged sexual abuse charges. "I did that because there were — and there have been since — just personal dinners or personal meetings which he has had that if it doesn't relate to EPA business, I don't think it's necessary to put it on the schedule," chief of staff Ryan Jackson told committee staff.

TRUMP HITS TESTER IN MONTANA: At a Montana rally for GOP Senate candidate Matt Rosendale, Trump took aim at Democratic Sen. Jon Tester, up for reelection in November in a state with particular interest in public lands and conservation policy. "It's time to retire liberal Democrat Jon Tester," Trump declared to the crowd. "A vote for Jon Tester is a vote for Chuck Schumer, Nancy Pelosi and the new leader of the Democrat Party Maxine Waters." POLITICO's Matt Nussbaum points out, however, Trump's attacks don't seem to have bothered Tester, who took out full-page newspaper ads in the state Thursday that read "Welcome to Montana & Thank You President Trump," and listing "Jon's 16 bills signed into law by President Trump" — an attempt to show the state's Trump-friendly voters that the senator can work with the president. Read more.

BUNDLED UP: It worked so well with the first so-called minibus, House Republicans are expected to bring another spending bundle to the floor this month, according to a notice posted Thursday by the Rules Committee. This time around the 2019 funding package will combine the Interior-Environment H.R. 6147 (115) and Financial Services H.R. 6258 (115) spending bills. Both bills "are flat-funded compared to current spending levels, though not all agencies and programs would see the same levels," Pro Budget and Appropriations' Sarah Ferris reports. The package is slated for floor action the week of July 16.

STUDY LOOKS AT TRUMP COAL PLAN CONSEQUENCES: The Trump administration's plan to prop up economically struggling coal and nuclear power plants would result in 353 to 815 premature deaths in 2019-20 due to the additional emissions of sulfur dioxide and nitrogen oxides, according to a new study from Resources for the Future, an independent, nonprofit research institution in Washington. The paper also calculated that each year the policy is in effect would cause 1 death for the 2 to 4.5 coal-mine jobs that it supports. The administration's plan, which it says is being pursued in the interest of national security and is detailed in a draft DOE paper, would delay the retirement of plants that have announced they will close by the end of 2020. Such a policy would support 790 coal-mine jobs, the study found, "though it would be likely to reduce economy-wide employment." Read the report here.

EERE GETS ACTING ASSISTANT SECRETARY: While the president's permanent pick for DOE's energy efficiency and renewable energy office awaits confirmation, Pro's Darius Dixon

AMERICAN OVERSIGHT

reports Cathy Tripodi will take on the role of acting assistant secretary for EERE. Dan Simmons was nominated for the permanent role last month by the White House. "As the confirmation process moves forward, Daniel has moved to Environmental Management to serve as an adviser to their leadership team," Alex Fitzsimmons, who has been Simmons' chief of staff, wrote in an email.

Tripodi joined DOE in January 2017 and has been the director of the department's Lab Operations Board, which coordinates research and mission objectives between the agency headquarters and its far-flung national laboratories.

EU EXTENDS RUSSIA SANCTIONS: The EU extended sanctions against Russia for another six months on Thursday over Moscow's actions in Ukraine, POLITICO Europe's Magdaline Duncan reports. The sanctions target, in part, Russia's energy sector by limiting access to EU markets for three energy companies. EU leaders have said that the sanctions will be lifted once all sides in Ukraine commit to the cease-fire agreed in the Minsk accords.

PUERTO RICO GOVERNOR TAKES IT TO COURT: Puerto Rico Gov. Ricardo Rosselló announced Thursday his government would go to court to challenge the authority of the island territory's federal oversight board to impose policies on the commonwealth, Pro Financial Services' Colin Wilhelm reports. The oversight board in question was established by Congress to address Puerto Rico's debt and has mandated cuts to pensions and government spending in its most recent recovery plan.

— **Separately, the Puerto Rico Electric Power Authority said** this week that 99.9 percent of power has been restored in the aftermath of Hurricane Maria — 10 months after the hurricane destroyed Puerto Rico's grid.

QUICK HITS

— "Americans already living EPA rollbacks under Pruitt," The Associated Press.

— "Doubts grow Aramco IPO will ever happen," The Wall Street Journal.

— "PHMSA agrees to provide public notice of hearings," E&E News.

— "Iran to Trump: Oil will cost $100 per barrel, and it is your fault," Reuters.

Stories from POLITICO Pro

Pruitt resigns amid torrent of ethics woes Back

By Anthony Adragna, Alex Guillén and Emily Holden | 07/05/2018 03:49 PM EDT

Scott Pruitt resigned from his post as administrator of the EPA on Thursday, finally bowing to a torrent of spending, travel and secrecy scandals that ended his run as one of President Donald Trump's most aggressive anti-regulation enforcers.

Trump continued praising his embattled EPA leader even after the ax fell — and months after most of his White House aides, including chief of staff John Kelly, had soured on him because of the increasingly bizarre accusations concerning Pruitt's use of agency employees to obtain housing, lotion, used mattresses, dinner with a Vatican cardinal and a job for his wife.

But the news about Pruitt had also turned potentially more dangerous, including what congressional Democrats said Thursday was evidence that his top aides had altered his official EPA calendar to hide politically troublesome meetings. Meanwhile, the coming media maelstrom over Trump's soon-to-be-announced Supreme Court nomination should soon erase any momentary headlines over Pruitt's departure.

"Within the Agency Scott has done an outstanding job, and I will always be thankful to him for this. ... We have made tremendous progress and the future of the EPA is very bright!" Trump tweeted. He added that Andrew Wheeler, Pruitt's deputy, would become acting administrator.

Trump later told reporters that "no final straw" led to Pruitt's decision to step down.

"Look, Scott is a terrific guy," the president said. "And he came to me and he said, 'I have such great confidence in the administration. I don't want to be a distraction.' And I think Scott felt that he was a distraction."

Trump said the decision had been in the works for "a couple of days."

Pruitt's critics were mainly jubilant — though deeply suspicious of Wheeler, a former coal lobbyist who is widely expected to pursue the same agenda of undoing former President Barack Obama's climate change agenda.

"Thank God he's gone," Sen. Tom Carper, the top Democrat on the Senate Environment and Public Works Committee, said of Pruitt. "This is a day to celebrate."

Among Trump's confidants, North Dakota billionaire oilman Harold Hamm was one of a dwindling number of people defending Pruitt, people close to Hamm and the White House told POLITICO.

Thursday's move came just two days after POLITICO reported Pruitt installed the former

AMERICAN OVERSIGHT

treasurer of his super PAC to lead the office in charge of releasing his public records and after CNN reported Pruitt directly asked Trump to remove Attorney General Jeff Sessions and give the position to him. Those were only a couple of the latest damaging accusations about Pruitt just this week, following months of drip-drip-drip disclosures about a $50-a-night Capitol Hill condo rental from a lobbyist's wife, first-class travel, dramatic increase in spending on security and uncompensated personal work that he received from EPA aides. (See POLITICO's running summary of Pruitt's controversies here.)

In his resignation letter, Pruitt praised Trump, but said the litany of bad headlines had forced him to leave the job.

"It is extremely difficult for me to cease serving you in this role first because I count it a blessing to be serving you in any capacity, but also, because of the transformative work that is occurring," Pruitt wrote. "However, the unrelenting attacks on me personally, my family, are unprecedented and have taken a sizable toll on all of us."

Even as more than a dozen investigations were initiated by EPA's inspector general, the House Oversight Committee, the White House, the GAO and the Oklahoma Bar Association, Trump continued to publicly back Pruitt, who was strongly supported by many conservatives. Since the spring, when his condo deal came to light, triggering a snowballing series of embarrassing stories about the EPA administrator, Pruitt managed to keep his head above water.

But some sources suggested Trump's support for Pruitt began to crumble after news emerged that Pruitt had pressed an aide to try to buy a used mattress from Trump's hotel, and that he had security staff chauffeur him around Washington to buy his favorite brand of skin lotion — raising concerns that more such stories would follow. The timing of the resignation announcement also appeared favorable, since the announcement of a new Supreme Court nominee Monday would likely overshadow the EPA news.

One Republican close to the White House said that Trump's support for Pruitt dropped with the realization that Wheeler could easily carry out the same regulatory rollback — but without the scandalous headlines. Some Republicans had been making that argument for months, however.

"It became increasingly apparent to the president, from conversations with the Hill and people inside the administration, that everyone loves Andrew Wheeler, and that Trump could get the same results without the drama," the Republican said. "If they did not have an heir apparent, this would probably be a different situation."

Environmentalists were quick to take a victory lap over Pruitt's resignation.

"Scott Pruitt's corruption and coziness with industry lobbyists finally caught up with him," Erich Pica, president of Friends of the Earth, said in a statement. "This victory belongs to the hundreds of thousands of activists who fought to protect the Environmental Protection Agency from a corrupt crony set on destroying it from the inside."

But some conservatives lamented that Pruitt had finally fallen victim to pressure from his

AMERICAN OVERSIGHT

political opponents.

"Lesson to other Trump officials from Pruitt resignation: Give the left/media/organized greens any molehill and they will turn it into K2," wrote Kimberley Strassel, a Wall Street Journal columnist and member of its editorial board. "Most of the accusations were overwrought, but the barrage was overwhelming. Let's hope an equally reformist successor denies them a repeat."

Conservative pundit Hugh Hewitt defended Pruitt as a "good friend and a very good man, caricatured by [the] left" and the mainstream media.

"I hope he sets to work on a memoir ASAP and deals out a tenth of what he took," Hewitt wrote on Twitter. "He's a man of great faith and perseverance so he probably won't, but the attacks on his family were unconscionable."

A handful of moderate Republican lawmakers called for Pruitt to be ousted early on, but congressional leaders supportive of his deregulatory agenda prevented the hot water Pruitt was in from increasing beyond a gentle simmer. And despite White House staffers' annoyance at his public stumbles, Pruitt reportedly enjoyed for months a chummy relationship with the president himself. The pair reportedly even gabbed on the phone regularly.

Pruitt's support among Republicans began to wane after emails and testimony from close aides showed that Pruitt on multiple occasions had used EPA resources and personnel to carry out errands and search for a job for his wife, Marlyn.

With scrutiny intensifying, half a dozen aides close to Pruitt departed EPA within a few weeks of each other, including his top policy adviser, his chief of security and a longtime friend from Oklahoma whom Pruitt had placed in charge of the Superfund program.

Emails released following lawsuits and aides' testimony to House investigators revealed that Pruitt had used EPA staff to search for housing for him and to inquire about obtaining a Chick-fil-A franchise for his wife — potential violations of laws prohibiting tasking federal workers with personal matters. Further, it was shown that Pruitt had used his aides to seek other employment opportunities for his wife, including from major GOP donors — raising questions about whether Pruitt had used his official position to benefit his family.

For Pruitt's critics, these revelations moved beyond other Pruitt actions that were questionable but politically survivable.

"His actions related to his wife's employment and the quid-pro-quo condo situation with industry lobbyists may have crossed a line into criminal conduct punishable by fines or even by time in prison," wrote several House Democrats in a letter asking the FBI to open a criminal investigation.

On Thursday, Democrats on the House Oversight Committee released new transcripts from interviews with Pruitt's closest aides, backing up aspects of many of the recent allegations against him.

AMERICAN OVERSIGHT

Three aides, including chief of staff Ryan Jackson, acknowledged removing many meetings from his calendars deemed "personal," including retroactively removing reference to a dinner with Cardinal George Pell after Pell's arrest on alleged sexual abuse charges.

"I did that because there were — and there have been since — just personal dinners or personal meetings which he has had that if it doesn't relate to EPA business, I don't think it's necessary to put it on the schedule," Jackson told Oversight Committee staff.

Another former aide, policy adviser Samantha Dravis, said she helped Marlyn Pruitt seek employment opportunities during work hours by tapping into her connections to conservative organizations. But she said Pruitt's push for his wife to land a $250,000-a-year post given her limited work experience was too much — even for the Federalist Society. Dravis said she ultimately refused to contact certain organizations and expressed concern doing would violate the Hatch Act.

"I was explicitly asked by Administrator Pruitt to assist Marlyn with obtaining this employment," Dravis said.

Dravis also said Pruitt originally hoped to become attorney general rather than Jeff Sessions and had "one or two" discussions with her about his ambitions for the post after he became head of the EPA. She said he "hinted" that there had been a discussion with Trump about the matter but didn't reveal further details.

Meanwhile, influential conservative voices began questioning whether Pruitt's antics were finally causing too much drag on the president's agenda.

Laura Ingraham, the conservative pundit known to be a favorite confidant of Trump, tweeted June 13 that Pruitt's bad judgment was hurting the president and meant he had "gotta go." The National Review called for his ouster, saying Pruitt had mistreated taxpayers. And Republican senators started saying Pruitt should be hauled in for a hearing, though they stopped short of calling for his resignation.

The president did not immediately name a nominee to serve as a permanent successor, as he did for similar high-profile departures in recent months. Senate Republicans have questioned whether another administrator could even be confirmed this year given the Senate's tight schedule and the GOP's razor-thin majority.

That leaves Pruitt's deputy, Wheeler, in charge at EPA in an acting capacity for the foreseeable future.

Wheeler previously worked as an attorney and lobbyist at Faegre Baker Daniels, where one of his clients was coal company Murray Energy, whose owner Robert Murray has pressed both the president and his Cabinet secretaries for generous policy actions to help coal.

He previously worked as a top aide to Sen. Jim Inhofe (R-Okla.), who prides himself as a skeptic

AMERICAN OVERSIGHT

of climate change.

Wheeler is a more traditional Washington conservative than Pruitt, familiar with the workings of both the town and Congress. But environmentalists see little practical difference between Wheeler and Pruitt, who arrived at the agency after suing it 14 times and with no background in environmental policy.

Wheeler, like Pruitt, is expected to continue his deregulatory agenda, rolling back Obama-era environmental regulations like the Clean Power Plan or the Waters of the U.S. rule. And the White House is likely to continue its quest to slash EPA's budget drastically, although Congress has twice rejected such cuts and some Republicans have questioned whether the agency can go any lower.

Nancy Cook and Daniel Strauss contributed to this report.

How Scott Pruitt blew it Back

By Alex Guillén and Andrew Restuccia | 07/05/2018 05:50 PM EDT

Scott Pruitt's once bright political future is in freefall after his swift exit as head of the EPA, following an avalanche of revelations about his first-class flights, pricey security trappings, backdoor raises for proteges and cozy deals with lobbyists stretching back to his days as an Oklahoma lawmaker.

Some of the most outlandish news reports about Pruitt's leadership at EPA went viral in recent months because of the bizarre details, such as the accusations that he had used his bodyguards to search for a rare brand of lotion or had tasked an aide with trying to buy a used mattress from the Trump International Hotel.

But beneath it all, according to ethics experts and Pruitt's critics, was the appearance that he had serially misused his Cabinet position, sometimes for simple vanity but occasionally — most consequentially — in ways that benefited himself and his family, drawing civil and potentially even criminal inquiries. And eventually, it was too much even for President Donald Trump, one of Pruitt's most outspoken fans.

Trump said the decision to resign was Pruitt's and that "no final straw" had precipitated the move, which has been in the works for a couple days. But in fact, Trump had begun to grow tired of the torrent of negative news stories about Pruitt and had come to believe they were a distraction that wouldn't go away, according to an administration official.

Among Trump's confidants, North Dakota billionaire oilman Harold Hamm was one of a

AMERICAN OVERSIGHT

dwindling number of people defending Pruitt, people close to Hamm and the White House told POLITICO.

"Scott is a terrific guy," Trump told reporters on Air Force One on Thursday after tweeting out the news of Pruitt's resignation. "And he came to me and he said I have such great confidence in the administration. I don't want to be a distraction. And I think Scott felt that he was a distraction."

The news dismayed prominent Republican donor Doug Deason, who told POLITICO late Thursday that he's flabbergasted Trump would send such a loyal foot soldier packing.

"I am just so disappointed in the President's failure to support Scott against the angry attacks from the loony left," said Deason, who had helped Pruitt pick new members of an influential EPA's science advisory board last year. "Nothing he did amounted to anything big. He was THE most effective cabinet member by far."

"Scott Pruitt is a sacrificial lamb and I have no idea why," he added.

Chief of staff John Kelly had been pushing Trump for months to fire Pruitt, and he ramped up his campaign in recent days, according to one person close to the White House. The person described removing Pruitt as one of Kelly's top priorities before leaving the administration, as he's expected to do sometime this summer.

But Kelly's frustration with Pruitt alone would never be enough to secure the EPA administrator's ouster.

At the White House, senior aides were increasingly convinced that Trump would soon push Pruitt out, but they didn't know exactly when and some were caught off guard by Thursday's announcement.

Pruitt, who believes he has a strong personal relationship with Trump, has told allies repeatedly in recent months that he wasn't worried about his job, insisting that the president had his back.

But Pruitt nonetheless showed flashes of irritation over the wave of negative press attention that overtook him. He told aides recently that he believed the reports about him were unfair, adding that he simply didn't understand why people were making such a big deal about his decision to enlist an aide to help his wife secure a Chick-fil-A franchise, according to another person familiar with the matter.

White House staffers had long ago given up on Pruitt, rarely coming to his defense when negative news stories dominated the headlines. Aides were sick of answering questions about the EPA chief and spoke privately about their hope that the president got rid of him. Even Pruitt's own staff had begun to sour on him, with many worrying that their future career prospects would be damaged by their association with Pruitt's tenure.

Each scandal seemed more damning than the last.

AMERICAN OVERSIGHT

Pruitt faced criticism last year for his extensive first-class travel on the taxpayer dime and security expenses including a $43,000 soundproof phone booth in his office. Then news this spring that Pruitt had secured a $50-a-night Capitol Hill condo lease from the wife of a lobbyist kicked off several months of damaging headlines on a nearly daily basis. His staff talked of getting him a $100,000-a-month private jet lease. Two aides who came with him from Oklahoma received massive raises Pruitt was later forced to reverse. He replaced the head of his security detail who wouldn't let him use lights and sirens to zip around the city like the president. And a top career official was dismissed after he questioned the security justifications for Pruitt's beefed up, multimillion-dollar protective detail.

Questions were raised about why Pruitt hired a longtime friend, whose bank over the years issued Pruitt multiple mortgages and helped him buy part ownership of a baseball team, and who was recently banned from the banking industry, to run EPA's Superfund program.

In recent weeks, former Pruitt aides told staffers on the House Oversight Committee about the administrator's search for a high-paying job for his wife and his use of EPA time and staff for personal matters. Although nascent, the new allegations raised questions of whether Pruitt had used his position to benefit his family or himself. Committee aides tell POLITICO their investigation will continue despite Pruitt's departure.

EPA's inspector general opened multiple overlapping probes into Pruitt's activities and spending. House Oversight Chairman Trey Gowdy (R-S.C.) turned heads when he launched his own investigation of Pruitt. Other inquiries are underway by the Government Accountability Office, the Oklahoma Bar Association and even the White House.

Pruitt's controversial activities led conservatives to call for his departure.

"Pruitt is the swamp. Drain it," Laura Ingraham, the conservative pundit known to have Trump's ear, tweeted on Tuesday.

Democrats and environmental groups quickly claimed victory with Pruitt's resignation.

"He made swamp creatures blush with his shameless excesses. All tolerated because President Trump liked his zealotry," Rep. Gerry Connolly (D-Va.) said.

"Ethics matter. So does a commitment to EPA's central mission. Scott Pruitt failed miserably on both counts," said Rhea Suh, president of the Natural Resources Defense Council.

Within the White House, a less splashy headline also helped undermine Pruitt's standing with Trump's inner circle: The news, first reported in early January by POLITICO, that Pruitt was advocating quietly but firmly behind the scenes to replace Jeff Sessions as Trump's attorney general. That ambition was a turning point that soured Pruitt to key White House aides, if not the president himself, officials said in the intervening months. Pruitt grew bolder, eventually directly asking Trump for the DOJ job, CNN reported on Tuesday, just two days before Pruitt resigned.

AMERICAN OVERSIGHT

Pruitt's troubles had been simmering for a long time as other Cabinet officials were picked off following their own scandals or tension with Trump, including HHS Secretary Tom Price, Veterans Affairs Secretary David Shulkin and Secretary of State Rex Tillerson.

His supporters noted that, unlike Price or Tillerson, Pruitt was viewed as an effective and loyal lieutenant to Trump.

"It is extremely difficult for me to cease serving you in this role first because I count it a blessing to be serving you in any capacity, but also, because of the transformative work that is occurring," Pruitt wrote in his resignation letter to Trump.

Pruitt rose to prominence as Oklahoma's attorney general, where he made his name suing the Obama EPA 14 times over what he called gross regulatory overreach. One of his greatest achievements was the Supreme Court's early 2016 decision to block the Clean Power Plan, a massive regulation that set the first-ever carbon dioxide limits on the power industry, while a lower court reviewed the rule — the first time the justices had ever done that.

He convinced Trump that such tenacity would prove useful in fulfilling his many campaign promises to undo almost all of former President Barack Obama's environmental agenda.

It didn't take long after Pruitt had arrived at EPA for him to halt and reverse key regulations Trump had vowed to roll back, including the power plant rule and Obama's Waters of the U.S. rule, which farmers and other industries decried as federal overreach.

But Pruitt went beyond the standard-issue Washington conservative environmental agenda that called for repealing those rules.

EPA is soon expected to propose a much more restricted version of the Clean Power Plan to satisfy legal requirements. But Pruitt has also kept open the option not to replace it at all, a position that most legal experts agree is untenable but which helps satisfy the right-wing groups that want EPA to stop regulating greenhouse gases altogether.

More recently, Pruitt made it clear he was willing to fight California over rolling back auto emissions standards. Carmakers who asked EPA for tweaks to the program instead found an administrator more than willing to torpedo the fragile national program if one of the most anti-Trump states didn't come to heel.

Pruitt proposed a new science policy that would exclude major public health studies while still accepting industry-backed research, a policy Republicans failed for years to pass out of Congress. He kicked academic researchers receiving funding from EPA off of key advisory boards, often replacing them with industry representatives. He made key policy changes to permitting rules and a key air quality program long sought by industry groups who said EPA was restricting their growth. He launched a review of how EPA calculates costs and benefits, a move that could make it harder to economically justify major regulations.

And he elevated climate change as a culture-war issue in a way that previous Republican

AMERICAN OVERSIGHT

administrators avoided.

Pruitt told POLITICO that he didn't even understand when critics called him a "climate denier" in an interview last summer. "What does it even mean? That's what I think about it. I deny the climate? Really? Wow, OK. That's crazy, in my view," he said.

As Hurricane Irma throttled Florida in 2017, the second of three major storms to devastate parts of the U.S. last year, Pruitt told CNN that it was "misplaced" to ask about climate change's effects on extreme weather during the disaster.

And Pruitt routinely criticized the "environmental left" for focusing too much on climate change to the detriment of other environmental problems like Superfund clean-ups and water infrastructure — although green groups said he failed to lead on those issues as well.

The climate change positioning helped Pruitt gain the ear of Trump, who had called the phenomenon a hoax created by the Chinese to disenfranchise U.S. manufacturing.

Pruitt outmaneuvered other top administration officials, including Tillerson and Trump economic adviser Gary Cohn, to convince Trump that the Paris agreement was a bad deal that put America second. Trump then made the U.S. the only nation on Earth to ditch the Paris climate agreement.

Unsurprisingly, Pruitt's rapid rise and strong conservative pedigree drew talk of future political runs.

Although Pruitt eschewed this year's Oklahoma gubernatorial race, many observers suspected he would be the top choice in 2020 to replace Sen. Jim Inhofe (R-Okla.), who has not said whether he will run again but will turn 86 that year. Rumor swirled that the Senate gig would groom Pruitt for a 2024 presidential run, and Pruitt held meetings with politically connected people who could one day be useful for such a campaign, including a company linked to GOP megadonor Sheldon Adelson and an Indiana coal executive-slash-Republican fundraiser.

But Pruitt's political ambitions and penchant for secrecy eventually came back to bite him.

His behind-the-scenes lobbying for Sessions' job earlier this year alienated him to top White House officials, and the slow drip of negative headlines about his travel, spending and hiring irritated them further.

But in late March, the news about his lobbyist-connected condo deal opened the floodgates to a seemingly endless stream of reports about Pruitt's activities.

At first, the drip-drip of damaging stories was embarrassing but manageable.

Then, as part of a media tour that mostly consisted of friendly interviews with conservative outlets, Pruitt found himself forced into defense by a combative Fox News interview. Though the president was publicly supportive of Pruitt, the White House acknowledged it was reviewing his activities.

AMERICAN OVERSIGHT

The investigation launched by Gowdy, the House Oversight chairman planning to retire after this year, showed the first cracks in Pruitt's support on the Hill. Weeks later, Senate Republicans started airing concerns, while Inhofe — a longtime friend of Pruitt's — said he was troubled by reports of Pruitt's past purchase of a large Oklahoma City home from a telecom lobbyist when he was a state senator.

Inhofe, who later said Pruitt had allayed his concerns, praised his fellow Oklahoman's work running EPA in a statement on Thursday.

"He was single minded at restoring the EPA to its proper statutory authority and ending the burdensome regulations that have stifled economic growth across the country," he said. "I was pleased to work with him on critical issues, like pulling out of the Paris Climate Agreement and prioritizing the cleanup of Superfund sites."

If Inhofe ultimately decides to retire but backs someone else to succeed him in 2020, Pruitt's once-clear path to the Senate — and potentially one day the presidency — could be significantly muddied.

Trump: Pruitt didn't want to be a 'distraction' Back

By Stephanie Murray | 07/05/2018 06:27 PM EDT

Environmental Protection Agency head Scott Pruitt abruptly left his Cabinet-level position in the administration because he didn't want to be a "distraction," President Donald Trump told reporters on Thursday afternoon.

"He'll go on to great things and he's going to have a wonderful life, I hope," Trump said on Air Force One, according to a pool report. "But he felt that he did not want to be a distraction for an administration that he has a lot of faith in."

Pruitt is the latest high-ranking official to exit the Trump administration. The former EPA chief had been embroiled in a laundry list of ethics scandals during his tenure. Among them: Pruitt allegedly asked staffers to carry out errands and find his wife a job, and he installed a $43,000 soundproof booth in his office and made other unusual security demands.

In his resignation letter, Pruitt praised the president and said "unrelenting attacks" have taken a toll on him and his family. Most recently, a woman confronted Pruitt in a restaurant and urged him to resign. The confrontation was caught on video and spread widely on the Internet.

AMERICAN OVERSIGHT

There was no final straw that triggered Pruitt's resignation, and the choice was "very much up to him," Trump said during the gaggle on Air Force One. According to the president, the resignation had been in the works for a couple of days.

"Scott Pruitt did an outstanding job inside of the EPA. We've gotten rid of record-breaking regulations, and it's been really good," Trump said. "His deputy has been with me actually a long time. He was very much an early Trump supporter. He was with us on the campaign. He is a very environmental person. He's a big believer, and he's going to do a fantastic job."

Pruitt initially supported former Florida Gov. Jeb Bush, a rival of Trump's during the 2016 campaign for the GOP presidential nomination. New acting EPA chief Andrew Wheeler, who has been serving as Pruitt's deputy and was previously a coal lobbyist, initially served as a volunteer consultant on the campaign of another rival, Sen. Marco Rubio (R-Fla.).

Pruitt resigns amid torrent of ethics woes Back

By Anthony Adragna, Alex Guillén and Emily Holden | 07/05/2018 03:49 PM EDT

Scott Pruitt resigned from his post as administrator of the EPA on Thursday, finally bowing to a torrent of spending, travel and secrecy scandals that ended his run as one of President Donald Trump's most aggressive anti-regulation enforcers.

Trump continued praising his embattled EPA leader even after the ax fell — and months after most of his White House aides, including chief of staff John Kelly, had soured on him because of the increasingly bizarre accusations concerning Pruitt's use of agency employees to obtain housing, lotion, used mattresses, dinner with a Vatican cardinal and a job for his wife.

But the news about Pruitt had also turned potentially more dangerous, including what congressional Democrats said Thursday was evidence that his top aides had altered his official EPA calendar to hide politically troublesome meetings. Meanwhile, the coming media maelstrom over Trump's soon-to-be-announced Supreme Court nomination should soon erase any momentary headlines over Pruitt's departure.

"Within the Agency Scott has done an outstanding job, and I will always be thankful to him for this. ... We have made tremendous progress and the future of the EPA is very bright!" Trump tweeted. He added that Andrew Wheeler, Pruitt's deputy, would become acting administrator.

Trump later told reporters that "no final straw" led to Pruitt's decision to step down.

"Look, Scott is a terrific guy," the president said. "And he came to me and he said, 'I have such

AMERICAN OVERSIGHT

great confidence in the administration. I don't want to be a distraction.' And I think Scott felt that he was a distraction."

Trump said the decision had been in the works for "a couple of days."

Pruitt's critics were mainly jubilant — though deeply suspicious of Wheeler, a former coal lobbyist who is widely expected to pursue the same agenda of undoing former President Barack Obama's climate change agenda.

"Thank God he's gone," Sen. Tom Carper, the top Democrat on the Senate Environment and Public Works Committee, said of Pruitt. "This is a day to celebrate."

Among Trump's confidants, North Dakota billionaire oilman Harold Hamm was one of a dwindling number of people defending Pruitt, people close to Hamm and the White House told POLITICO.

Thursday's move came just two days after POLITICO reported Pruitt installed the former treasurer of his super PAC to lead the office in charge of releasing his public records and after CNN reported Pruitt directly asked Trump to remove Attorney General Jeff Sessions and give the position to him. Those were only a couple of the latest damaging accusations about Pruitt just this week, following months of drip-drip-drip disclosures about a $50-a-night Capitol Hill condo rental from a lobbyist's wife, first-class travel, dramatic increase in spending on security and uncompensated personal work that he received from EPA aides. (See POLITICO's running summary of Pruitt's controversies here.)

In his resignation letter, Pruitt praised Trump, but said the litany of bad headlines had forced him to leave the job.

"It is extremely difficult for me to cease serving you in this role first because I count it a blessing to be serving you in any capacity, but also, because of the transformative work that is occurring," Pruitt wrote. "However, the unrelenting attacks on me personally, my family, are unprecedented and have taken a sizable toll on all of us."

Even as more than a dozen investigations were initiated by EPA's inspector general, the House Oversight Committee, the White House, the GAO and the Oklahoma Bar Association, Trump continued to publicly back Pruitt, who was strongly supported by many conservatives. Since the spring, when his condo deal came to light, triggering a snowballing series of embarrassing stories about the EPA administrator, Pruitt managed to keep his head above water.

But some sources suggested Trump's support for Pruitt began to crumble after news emerged that Pruitt had pressed an aide to try to buy a used mattress from Trump's hotel, and that he had security staff chauffeur him around Washington to buy his favorite brand of skin lotion — raising concerns that more such stories would follow. The timing of the resignation announcement also appeared favorable, since the announcement of a new Supreme Court nominee Monday would likely overshadow the EPA news.

AMERICAN OVERSIGHT

One Republican close to the White House said that Trump's support for Pruitt dropped with the realization that Wheeler could easily carry out the same regulatory rollback — but without the scandalous headlines. Some Republicans had been making that argument for months, however.

"It became increasingly apparent to the president, from conversations with the Hill and people inside the administration, that everyone loves Andrew Wheeler, and that Trump could get the same results without the drama," the Republican said. "If they did not have an heir apparent, this would probably be a different situation."

Environmentalists were quick to take a victory lap over Pruitt's resignation.

"Scott Pruitt's corruption and coziness with industry lobbyists finally caught up with him," Erich Pica, president of Friends of the Earth, said in a statement. "This victory belongs to the hundreds of thousands of activists who fought to protect the Environmental Protection Agency from a corrupt crony set on destroying it from the inside."

But some conservatives lamented that Pruitt had finally fallen victim to pressure from his political opponents.

"Lesson to other Trump officials from Pruitt resignation: Give the left/media/organized greens any molehill and they will turn it into K2," wrote Kimberley Strassel, a Wall Street Journal columnist and member of its editorial board. "Most of the accusations were overwrought, but the barrage was overwhelming. Let's hope an equally reformist successor denies them a repeat."

Conservative pundit Hugh Hewitt defended Pruitt as a "good friend and a very good man, caricatured by [the] left" and the mainstream media.

"I hope he sets to work on a memoir ASAP and deals out a tenth of what he took," Hewitt wrote on Twitter. "He's a man of great faith and perseverance so he probably won't, but the attacks on his family were unconscionable."

A handful of moderate Republican lawmakers called for Pruitt to be ousted early on, but congressional leaders supportive of his deregulatory agenda prevented the hot water Pruitt was in from increasing beyond a gentle simmer. And despite White House staffers' annoyance at his public stumbles, Pruitt reportedly enjoyed for months a chummy relationship with the president himself. The pair reportedly even gabbed on the phone regularly.

Pruitt's support among Republicans began to wane after emails and testimony from close aides showed that Pruitt on multiple occasions had used EPA resources and personnel to carry out errands and search for a job for his wife, Marlyn.

With scrutiny intensifying, half a dozen aides close to Pruitt departed EPA within a few weeks of each other, including his top policy adviser, his chief of security and a longtime friend from Oklahoma whom Pruitt had placed in charge of the Superfund program.

Emails released following lawsuits and aides' testimony to House investigators revealed that

AMERICAN OVERSIGHT

Pruitt had used EPA staff to search for housing for him and to inquire about obtaining a Chick-fil-A franchise for his wife — potential violations of laws prohibiting tasking federal workers with personal matters. Further, it was shown that Pruitt had used his aides to seek other employment opportunities for his wife, including from major GOP donors — raising questions about whether Pruitt had used his official position to benefit his family.

For Pruitt's critics, these revelations moved beyond other Pruitt actions that were questionable but politically survivable.

"His actions related to his wife's employment and the quid-pro-quo condo situation with industry lobbyists may have crossed a line into criminal conduct punishable by fines or even by time in prison," wrote several House Democrats in a letter asking the FBI to open a criminal investigation.

On Thursday, Democrats on the House Oversight Committee released new transcripts from interviews with Pruitt's closest aides, backing up aspects of many of the recent allegations against him.

Three aides, including chief of staff Ryan Jackson, acknowledged removing many meetings from his calendars deemed "personal," including retroactively removing reference to a dinner with Cardinal George Pell after Pell's arrest on alleged sexual abuse charges.

"I did that because there were — and there have been since — just personal dinners or personal meetings which he has had that if it doesn't relate to EPA business, I don't think it's necessary to put it on the schedule," Jackson told Oversight Committee staff.

Another former aide, policy adviser Samantha Dravis, said she helped Marlyn Pruitt seek employment opportunities during work hours by tapping into her connections to conservative organizations. But she said Pruitt's push for his wife to land a $250,000-a-year post given her limited work experience was too much — even for the Federalist Society. Dravis said she ultimately refused to contact certain organizations and expressed concern doing would violate the Hatch Act.

"I was explicitly asked by Administrator Pruitt to assist Marlyn with obtaining this employment," Dravis said.

Dravis also said Pruitt originally hoped to become attorney general rather than Jeff Sessions and had "one or two" discussions with her about his ambitions for the post after he became head of the EPA. She said he "hinted" that there had been a discussion with Trump about the matter but didn't reveal further details.

Meanwhile, influential conservative voices began questioning whether Pruitt's antics were finally causing too much drag on the president's agenda.

Laura Ingraham, the conservative pundit known to be a favorite confidant of Trump, tweeted June 13 that Pruitt's bad judgment was hurting the president and meant he had "gotta go." The

AMERICAN OVERSIGHT

National Review called for his ouster, saying Pruitt had mistreated taxpayers. And Republican senators started saying Pruitt should be hauled in for a hearing, though they stopped short of calling for his resignation.

The president did not immediately name a nominee to serve as a permanent successor, as he did for similar high-profile departures in recent months. Senate Republicans have questioned whether another administrator could even be confirmed this year given the Senate's tight schedule and the GOP's razor-thin majority.

That leaves Pruitt's deputy, Wheeler, in charge at EPA in an acting capacity for the foreseeable future.

Wheeler previously worked as an attorney and lobbyist at Faegre Baker Daniels, where one of his clients was coal company Murray Energy, whose owner Robert Murray has pressed both the president and his Cabinet secretaries for generous policy actions to help coal.

He previously worked as a top aide to Sen. Jim Inhofe (R-Okla.), who prides himself as a skeptic of climate change.

Wheeler is a more traditional Washington conservative than Pruitt, familiar with the workings of both the town and Congress. But environmentalists see little practical difference between Wheeler and Pruitt, who arrived at the agency after suing it 14 times and with no background in environmental policy.

Wheeler, like Pruitt, is expected to continue his deregulatory agenda, rolling back Obama-era environmental regulations like the Clean Power Plan or the Waters of the U.S. rule. And the White House is likely to continue its quest to slash EPA's budget drastically, although Congress has twice rejected such cuts and some Republicans have questioned whether the agency can go any lower.

Ethanol producers hoping for better treatment from new EPA chief Back

By Eric Wolff | 07/05/2018 05:31 PM EDT

Ethanol producers hope Andrew Wheeler, who will be taking the reigns at EPA as of Friday night, will be more corn-friendly in his management of the the Renewable Fuel Standard than soon-to-depart Administrator Scott Pruitt.

"President Trump made the right decision," said Iowa Sen. Chuck Grassley, who had been

AMERICAN OVERSIGHT

infuriated by Pruitt's actions on the RFS, in a statement on Pruitt's resignation. "Fewer things are more important for government officials than maintaining public trust. Administrator Pruitt, through his own actions, lost that trust. I hope Acting Administrator Wheeler views this as an opportunity to restore this Administration's standing with farmers and the biofuels industry."

Pruitt antagonized ethanol producers and Midwestern farmers with repeated efforts to ease RFS requirements on refiners at what corn farmers perceived as their expense. Before joining EPA, Wheeler was a lobbyist whose clients included ethanol producer trade association Growth Energy.

"That sound you hear is a collective sigh of relief coming from the Midwest," said Bob Dinneen, CEO of the Renewable Fuels Association. "We look forward to working with Acting Administrator Andy Wheeler, whose long career focusing on policies that recognize economic growth and environmental protection are not mutually exclusive is not undermined by an unmistakable anti-ethanol, anti-farmer bias."

Wheeler has a reputation in D.C. as a smooth operator with deep relationships on the Hill.

"What changes is that Wheeler knows how to get things done at the agency and, in general, in Washington," a refining industry source said over email. "With Andy I think there will be less free-lancing and more a focus on working with career folks at EPA.... Quite frankly, less free lancing will serve the interests of all stakeholders."

Pruitt's replacement 'should scare anyone who breathes' Back

By Eric Wolff and Alex Guillén | 05/04/2018 05:49 PM EDT

The man taking the reins at the Environmental Protection Agency following the resignation of Scott Pruitt is a longtime Washington insider and coal lobbyist who is set to pursue the same anti-regulation agenda — only without all of Pruitt's baggage.

Andrew Wheeler, sworn in as EPA's deputy administrator in late April after a six-month confirmation battle, has spent decades in what President Donald Trump calls "the swamp," first as a top aide to Sen. Jim Inhofe (R-Okla.) at the Environment and Public Works Committee, then as an energy lobbyist for clients such as the politically active coal company Murray Energy.

On Thursday, Trump named Wheeler as EPA's acting administrator after accepting Pruitt's resignation. He is set to take the job Monday.

In contrast to Pruitt, an Oklahoma conservative who alienated a growing number of fellow Trump-supporting Republicans, Wheeler is a smooth insider with a penchant for policy details

AMERICAN OVERSIGHT

and a reputation for working well with both friends and adversaries. But those who have dealt with him say he's on board with the broad deregulatory agenda that Pruitt and Trump have pursued.

"I have no doubt that Andy will continue on with our great and lasting EPA agenda," Trump tweeted in announcing Pruitt's resignation. "We have made tremendous progress and the future of the EPA is very bright!"

Wheeler, who shares many of Pruitt's anti-regulatory views, is expected to "stay the course" with many of Pruitt's policies, according to one EPA source.

Republicans and other allies quickly praised Wheeler as a steady hand for an agency in turmoil.

Wheeler is the "perfect choice" for acting administrator, said Inhofe.

"Andrew worked for me for 14 years, has an impeccable reputation and has the experience to be a strong leader at the EPA," Inhofe added. "I have no doubt and complete confidence he will continue the important deregulatory work that Scott Pruitt started while being a good steward of the environment."

"I have confidence that Andrew Wheeler will be a good partner at #EPA, and I look forward to working with him on the" Renewable Fuel Standard, tweeted Sen. Joni Ernst (R-Iowa), who in recent months had expressed public anger over moves by Pruitt that upset the ethanol industry.

"Wheeler knows how to make the trains run on time at the agency and will be more inclined to work with career folks," said one refining industry source. "Andy also has strong relationships on the Hill from his work there, and that will work to the agency's benefit as well."

Environmentalists were glad to see Pruitt go, but many quickly acknowledged that Wheeler will be a formidable adversary to their agenda.

"Wheeler is much smarter and will try to keep his efforts under the radar in implementing Trump's destructive agenda," Jeremy Symons, vice president for political affairs at the Environmental Defense Fund, said in May before Pruitt's resignation. "That should scare anyone who breathes."

"Andrew Wheeler is equally unqualified to serve as the nation's chief environmental steward," said Ana Unruh Cohen of the Natural Resources Defense Council. "Like Pruitt, this veteran coal lobbyist has shown only disdain for the EPA's vital mission to protect Americans' health and our environment. Make no mistake: we'll fight Wheeler's pollution agenda with the same vigor as we did Pruitt's."

It is not clear how long Wheeler may be left leading EPA on an acting basis, as Senate Republicans have questioned whether any nominee could win confirmation this year amid the upcoming midterm elections and the GOP's razor-thin majority in the chamber.

AMERICAN OVERSIGHT

With Pruitt out, Wheeler faces the task of managing a 14,000-employee agency where much of the career staff, and even many Republican political appointees, has been demoralized by the cascade of scandals.

Besides his personal troubles, Pruitt arrived at EPA as one of its most determined adversaries, having filed a series of lawsuits in concert with industry groups to overturn the agency's Obama-era climate and environmental regulations. Pruitt's security team also blocked most agency employees from entering rooms and corridors near his third-floor offices.

Wheeler, in contrast, came to the agency steeped in its work.

He spent four years working at EPA at the start of his career, before going on to work for Inhofe and the Senate environment committee. He helped create the federal ethanol mandate that remains a major source of friction for EPA, dividing Republicans in the Senate. He also represented coal magnate Bob Murray as a lobbyist through the battles over the Obama administration's climate regulations for power plants, and then later in trying to persuade the Energy Department to bail out financially ailing coal power plants.

Former Hill colleagues emphasize his ability to find common ground with political opponents, including former Sen. Jim Jeffords (I-Vt.), and former liberal Democrat Sen. Barbara Boxer of California, both of whom have chaired the environment committee. Matt Dempsey, who worked for Wheeler under Inhofe, said Wheeler's ability to find common cause was one factor in the Jeffords-Inhofe and Jeffords-Boxer relationships that led to passage of highway bills and other major legislation.

"A lot of that is due to Andrew," said Dempsey, now a managing director at FTI Consulting. "He has an ability to work across the aisle and get things done."

That ability to work the Hill could be critical at EPA, where Pruitt's efforts to make changes to the ethanol program divided oil-state and corn-state Senate Republicans. Those efforts have especially infuriated corn supporters led by Sen. Chuck Grassley (R-Iowa), who accused Pruitt in May of "screwing the family farmer."

Wheeler's former colleagues think he might be able to smooth those waters.

"He is someone who, generally on policy, though we might not always agree, is someone who will listen to the other side of the aisle on how we formulate policy," a Democratic aide who has worked with Wheeler told POLITICO, noting that that trait could be especially important if the House or Senate flips after the midterms. "Being a product of the Senate and of the Congress, it will be much easier for those who are here to interact with him."

Among other things, the Democratic aide said, Wheeler respects Congress' role in the authorization and appropriations process and would be much more willing to appear at congressional hearings — unlike Pruitt, who was scarce on the Hill.

The aide also said they think Wheeler's reputation as a "rule-driven" staffer would ensure stricter

AMERICAN OVERSIGHT

adherence to ethics standards at the agency.

Wheeler may also be better able to repair the fractured relationship between the political appointees at the top of the agency and career staff, who have felt left out or ignored by Pruitt on key issues. Wheeler spent some of his first days back at the agency visiting the offices of career staff and making introductions, a marked change from his boss, according to an EPA official.

"The impression he creates is very personable, respectful, good listener," said another EPA employee. "He's very interested in being involved in the substantive issues. He's ready to get involved in our issues."

Still, most of the people interviewed agreed that Wheeler would advance Trump's and Pruitt's agenda of undoing major Obama-era regulations, including the power plant climate rule and a sweeping measure on streams and wetlands.

"I think that Andrew is well aware of the president's agenda, and the parts of the agenda that are the responsibility of the EPA," said Andy Ehrlich, now a partner at the lobbying and political consulting firm Total Spectrum, who recruited Wheeler from the Hill in 2009 to the law firm Faegre Baker Daniels and worked with him for years. "I would expect based on my experience with Andrew to do what he can to see that the president's s agenda at the EPA is fulfilled in a methodical and thoughtful way."

Pruitt and Wheeler may have some small differences: The Democratic aide said Wheeler might offer more support to the agency's research, in contrast to Pruitt. But people who know Wheeler see him as a "true believer" in rolling back regulations who is comfortable in the weeds of policy.

Environmental groups also believe Wheeler has his own ethics baggage, citing reports that he held fundraisers for political patrons in the months ahead of his official nomination to EPA.

Brune held out one bit of hope — that Wheeler would face the same obstacles as Pruitt in turning back EPA's environmental protections.

"Any executive with EPA, administrator or deputy, will have a hard time trying to flout the findings of the scientific community and operate against the public will," Brune said. "I don't think Wheeler would be more effective at that than Pruitt has been."

Environmentalists: Pruitt's replacement 'should scare anyone who breathes' Back

AMERICAN OVERSIGHT

By Eric Wolff | 05/05/2018 06:43 AM EDT

The man taking the reins at the Environmental Protection Agency after Scott Pruitt's downfall is a longtime Washington insider and coal lobbyist who is set to pursue the same anti-regulation agenda — only without all of Pruitt's baggage.

Andrew Wheeler, sworn in as EPA's deputy administrator in late April after a six-month confirmation battle, has spent decades in what President Donald Trump calls "the swamp," first as a top aide to Sen. Jim Inhofe (R-Okla.) at the Environment and Public Works Committee, then as an energy lobbyist for clients such as the politically active coal company Murray Energy.

On Thursday, Trump named Wheeler as EPA's acting administrator after accepting Pruitt's resignation.

In contrast to Pruitt, an Oklahoma conservative who alienated a growing number of fellow Trump-supporting Republicans, Wheeler is a smooth insider with a penchant for policy details and a reputation for working well with both friends and adversaries. But those who have dealt with him say he's on board with the broad deregulatory agenda that Pruitt and Trump are pursuing.

That presents a paradox for environmental groups, who would welcome Pruitt's departure but fear his replacement would be a much more formidable opponent.

"Wheeler is much smarter and will try to keep his efforts under the radar in implementing Trump's destructive agenda," said Jeremy Symons, vice president for political affairs at the Environmental Defense Fund. "That should scare anyone who breathes."

Symons noted that many of Pruitt's aggressive deregulatory efforts have run into trouble in federal courts.

"The problem with the Pruitt approach is it's like a sugar high," said Jeff Navin, a Democratic lobbyist and former Energy Department staffer who has shared lobbying clients with Wheeler. "It feels really, really good for a moment, but if you're not following rules and procedure, not laying down substance for the decision you're making, you're not going to last very long."

Another person who has worked with Wheeler said: "He's like Mike Pence is to Trump. ... He's behind the scenes. He'll get a lot done and doesn't need to be in the news."

With Pruitt out, Wheeler faces the task of managing a 14,000-employee agency where much of the career staff, and even many Republican political appointees, have been demoralized by the cascade of scandals.

Besides his personal troubles, Pruitt arrived at EPA as one of its most determined adversaries, having filed a series of lawsuits in concert with industry groups to overturn the agency's Obama-era climate and environmental regulations. Pruitt's security team also blocked most agency employees from entering rooms and corridors near his third-floor offices.

AMERICAN OVERSIGHT

Wheeler, in contrast, came to the agency steeped in its work. He spent four years working at EPA at the start of his career, before going on to work for Inhofe and the Senate environment committee. He helped create the federal ethanol mandate that remains a major source of friction for EPA, dividing Republicans in the Senate. He also represented coal magnate Bob Murray as a lobbyist through the battles over the Obama administration's climate regulations for power plants, and then later in trying to persuade the Energy Department to bail out financially ailing coal power plants.

Former Hill colleagues emphasize his ability to find common ground with political opponents, including former Sen. Jim Jeffords (I-Vt.), and liberal former Democratic Sen. Barbara Boxer of California, both of whom have chaired the environment committee. Matt Dempsey, who worked for Wheeler under Inhofe, said Wheeler's ability to find common cause was one factor in the Jeffords-Inhofe and Jeffords-Boxer relationships that led to passage of highway bills and other major legislation.

"A lot of that is due to Andrew," said Dempsey, now a managing director at FTI Consulting. "He has an ability to work across the aisle and get things done."

That ability to work the Hill could be critical at EPA, where Pruitt's work on making changes to the ethanol program divided oil-state and corn-state Senate Republicans. Those efforts have especially infuriated corn supporters led by Sen. Chuck Grassley (R-Iowa), who accused Pruitt this week of "screwing the family farmer."

Wheeler's former colleagues think he might be able to smooth those waters.

"He is someone who, generally on policy, though we might not always agree, is someone who will listen to the other side of the aisle on how we formulate policy," a Democratic aide who has worked with Wheeler told POLITICO, noting that trait could be especially important if the House or Senate flips after the midterms. "Being a product of the Senate and of the Congress, it will be much easier for those who are here to interact with him."

Among other things, the Democratic aide said, Wheeler respects Congress' role in the authorization and appropriations process and would be much more willing to appear at congressional hearings — unlike Pruitt, who was scarce on the Hill.

The aide also said they think Wheeler's reputation as a "rule-driven" staffer would ensure stricter adherence to ethics standards at the agency.

Wheeler may also be better able to repair the fractured relationship between the political appointees at the top of the agency and career staff, who have felt left out or ignored by Pruitt on key issues. Wheeler spent some of his first days back at the agency visiting the offices of career staff and making introductions, a marked change from his boss, according to an EPA official.

"The impression he creates is very personable, respectful, good listener," said another EPA employee. "He's very interested in being involved in the substantive issues. He's ready to get

AMERICAN OVERSIGHT

involved in our issues."

Still, most of the people interviewed agreed that Wheeler would advance Trump's and Pruitt's agenda of undoing major Obama-era regulations, including the power plant climate rule and a sweeping measure on streams and wetlands.

"I think that Andrew is well aware of the president's agenda, and the parts of the agenda that are the responsibility of the EPA," said Andy Ehrlich, now a partner at the lobbying and political consulting firm Total Spectrum, who recruited Wheeler from the Hill in 2009 to the law firm Faegre Baker Daniels and worked with him for years. "I would expect based on my experience with Andrew to do what he can to see that the president's agenda at the EPA is fulfilled in a methodical and thoughtful way."

Pruitt and Wheeler may have some small differences: The Democratic aide said Wheeler might offer more support to the agency's research, in contrast to Pruitt. But people who know Wheeler see him as a "true believer" in rolling back regulations who is comfortable in the weeds of policy.

That's the worry of environmental groups, which note the years Wheeler spent working with Inhofe, who calls human-caused global warming a "hoax," and Murray, a fierce opponent of EPA's climate regulations.

Wheeler's "entire professional career, most of it has been devoted to resisting attempts to improve the quality of our air and our water and the safety of our communities," said Sierra Club Executive Director Michael Brune. "He fought against safeguards to limit mercury poisoning. He fought against protections to limit the amount of ozone in our skies. He fought against air pollution from neighboring states. He's a climate denier. So, sadly, he fits in well with EPA leadership."

Environmental groups also believe Wheeler has his own ethics baggage, citing reports that he held fundraisers for political patrons in the months ahead of his official nomination to EPA. Brune held out one bit of hope — that Wheeler would face the same obstacles as Pruitt in turning back EPA's environmental protections.

"Any executive with EPA, administrator or deputy, will have a hard time trying to flout the findings of the scientific community and operate against the public will," Brune said. "I don't think Wheeler would be more effective at that than Pruitt has been."

Full text: Pruitt's resignation letter Back

AMERICAN OVERSIGHT

07/05/2018 04:17 PM EDT

The full text of Scott Pruitt's resignation letter:

Mr. President, it has been an honor to serve you in the Cabinet as Administrator of the EPA. Truly, your confidence in me has blessed me personally and enabled me to advance your agenda beyond what anyone anticipated at the beginning of your Administration. Your courage, steadfastness and resolute commitment to get results for the American people, both with regard to improved environmental outcomes as well as historical regulatory reform, is in fact occurring at an unprecedented pace and I thank you for the opportunity to serve you and the American people in helping achieve those ends.

That is why is hard for me to advise you I am stepping down as Administrator of the EPA effective as of July 6. It is extremely difficult for me to cease serving you in this role first because I count it a blessing to be serving you in any capacity, but also, because of the transformative work that is occurring. However, the unrelenting attacks on me personally, my family, are unprecedented and have taken a sizable toll on all of us.

My desire in service to you has always been to bless you as you make important decisions for the American people. I believe you are serving as President today because of God's providence. I believe that same providence brought me into your service. I pray as I have served you that I have blessed you and enabled you to effectively lead the American people. Thank you again Mr. President for the honor of serving you and I wish you Godspeed in all that you put your hand to.

Your Faithful Friend,
Scott Pruitt

How Scott Pruitt blew it Back

By Alex Guillén and Andrew Restuccia | 07/05/2018 05:50 PM EDT

Scott Pruitt's once bright political future is in freefall after his swift exit as head of the EPA, following an avalanche of revelations about his first-class flights, pricey security trappings, backdoor raises for proteges and cozy deals with lobbyists stretching back to his days as an Oklahoma lawmaker.

Some of the most outlandish news reports about Pruitt's leadership at EPA went viral in recent months because of the bizarre details, such as the accusations that he had used his bodyguards to search for a rare brand of lotion or had tasked an aide with trying to buy a used mattress from the Trump International Hotel.

AMERICAN OVERSIGHT

But beneath it all, according to ethics experts and Pruitt's critics, was the appearance that he had serially misused his Cabinet position, sometimes for simple vanity but occasionally — most consequentially — in ways that benefited himself and his family, drawing civil and potentially even criminal inquiries. And eventually, it was too much even for President Donald Trump, one of Pruitt's most outspoken fans.

Trump said the decision to resign was Pruitt's and that "no final straw" had precipitated the move, which has been in the works for a couple days. But in fact, Trump had begun to grow tired of the torrent of negative news stories about Pruitt and had come to believe they were a distraction that wouldn't go away, according to an administration official.

Among Trump's confidants, North Dakota billionaire oilman Harold Hamm was one of a dwindling number of people defending Pruitt, people close to Hamm and the White House told POLITICO.

"Scott is a terrific guy," Trump told reporters on Air Force One on Thursday after tweeting out the news of Pruitt's resignation. "And he came to me and he said I have such great confidence in the administration. I don't want to be a distraction. And I think Scott felt that he was a distraction."

The news dismayed prominent Republican donor Doug Deason, who told POLITICO late Thursday that he's flabbergasted Trump would send such a loyal foot soldier packing.

"I am just so disappointed in the President's failure to support Scott against the angry attacks from the loony left," said Deason, who had helped Pruitt pick new members of an influential EPA's science advisory board last year. "Nothing he did amounted to anything big. He was THE most effective cabinet member by far."

"Scott Pruitt is a sacrificial lamb and I have no idea why," he added.

Chief of staff John Kelly had been pushing Trump for months to fire Pruitt, and he ramped up his campaign in recent days, according to one person close to the White House. The person described removing Pruitt as one of Kelly's top priorities before leaving the administration, as he's expected to do sometime this summer.

But Kelly's frustration with Pruitt alone would never be enough to secure the EPA administrator's ouster.

At the White House, senior aides were increasingly convinced that Trump would soon push Pruitt out, but they didn't know exactly when and some were caught off guard by Thursday's announcement.

Pruitt, who believes he has a strong personal relationship with Trump, has told allies repeatedly in recent months that he wasn't worried about his job, insisting that the president had his back.

AMERICAN OVERSIGHT

But Pruitt nonetheless showed flashes of irritation over the wave of negative press attention that overtook him. He told aides recently that he believed the reports about him were unfair, adding that he simply didn't understand why people were making such a big deal about his decision to enlist an aide to help his wife secure a Chick-fil-A franchise, according to another person familiar with the matter.

White House staffers had long ago given up on Pruitt, rarely coming to his defense when negative news stories dominated the headlines. Aides were sick of answering questions about the EPA chief and spoke privately about their hope that the president got rid of him. Even Pruitt's own staff had begun to sour on him, with many worrying that their future career prospects would be damaged by their association with Pruitt's tenure.

Each scandal seemed more damning than the last.

Pruitt faced criticism last year for his extensive first-class travel on the taxpayer dime and security expenses including a $43,000 soundproof phone booth in his office. Then news this spring that Pruitt had secured a $50-a-night Capitol Hill condo lease from the wife of a lobbyist kicked off several months of damaging headlines on a nearly daily basis. His staff talked of getting him a $100,000-a-month private jet lease. Two aides who came with him from Oklahoma received massive raises Pruitt was later forced to reverse. He replaced the head of his security detail who wouldn't let him use lights and sirens to zip around the city like the president. And a top career official was dismissed after he questioned the security justifications for Pruitt's beefed up, multimillion-dollar protective detail.

Questions were raised about why Pruitt hired a longtime friend, whose bank over the years issued Pruitt multiple mortgages and helped him buy part ownership of a baseball team, and who was recently banned from the banking industry, to run EPA's Superfund program.

In recent weeks, former Pruitt aides told staffers on the House Oversight Committee about the administrator's search for a high-paying job for his wife and his use of EPA time and staff for personal matters. Although nascent, the new allegations raised questions of whether Pruitt had used his position to benefit his family or himself. Committee aides tell POLITICO their investigation will continue despite Pruitt's departure.

EPA's inspector general opened multiple overlapping probes into Pruitt's activities and spending. House Oversight Chairman Trey Gowdy (R-S.C.) turned heads when he launched his own investigation of Pruitt. Other inquiries are underway by the Government Accountability Office, the Oklahoma Bar Association and even the White House.

Pruitt's controversial activities led conservatives to call for his departure.

"Pruitt is the swamp. Drain it," Laura Ingraham, the conservative pundit known to have Trump's ear, tweeted on Tuesday.

Democrats and environmental groups quickly claimed victory with Pruitt's resignation.

AMERICAN OVERSIGHT

"He made swamp creatures blush with his shameless excesses. All tolerated because President Trump liked his zealotry," Rep. Gerry Connolly (D-Va.) said.

"Ethics matter. So does a commitment to EPA's central mission. Scott Pruitt failed miserably on both counts," said Rhea Suh, president of the Natural Resources Defense Council.

Within the White House, a less splashy headline also helped undermine Pruitt's standing with Trump's inner circle: The news, first reported in early January by POLITICO, that Pruitt was advocating quietly but firmly behind the scenes to replace Jeff Sessions as Trump's attorney general. That ambition was a turning point that soured Pruitt to key White House aides, if not the president himself, officials said in the intervening months. Pruitt grew bolder, eventually directly asking Trump for the DOJ job, CNN reported on Tuesday, just two days before Pruitt resigned.

Pruitt's troubles had been simmering for a long time as other Cabinet officials were picked off following their own scandals or tension with Trump, including HHS Secretary Tom Price, Veterans Affairs Secretary David Shulkin and Secretary of State Rex Tillerson.

His supporters noted that, unlike Price or Tillerson, Pruitt was viewed as an effective and loyal lieutenant to Trump.

"It is extremely difficult for me to cease serving you in this role first because I count it a blessing to be serving you in any capacity, but also, because of the transformative work that is occurring," Pruitt wrote in his resignation letter to Trump.

Pruitt rose to prominence as Oklahoma's attorney general, where he made his name suing the Obama EPA 14 times over what he called gross regulatory overreach. One of his greatest achievements was the Supreme Court's early 2016 decision to block the Clean Power Plan, a massive regulation that set the first-ever carbon dioxide limits on the power industry, while a lower court reviewed the rule — the first time the justices had ever done that.

He convinced Trump that such tenacity would prove useful in fulfilling his many campaign promises to undo almost all of former President Barack Obama's environmental agenda.

It didn't take long after Pruitt had arrived at EPA for him to halt and reverse key regulations Trump had vowed to roll back, including the power plant rule and Obama's Waters of the U.S. rule, which farmers and other industries decried as federal overreach.

But Pruitt went beyond the standard-issue Washington conservative environmental agenda that called for repealing those rules.

EPA is soon expected to propose a much more restricted version of the Clean Power Plan to satisfy legal requirements. But Pruitt has also kept open the option not to replace it at all, a position that most legal experts agree is untenable but which helps satisfy the right-wing groups that want EPA to stop regulating greenhouse gases altogether.

More recently, Pruitt made it clear he was willing to fight California over rolling back auto

AMERICAN OVERSIGHT

emissions standards. Carmakers who asked EPA for tweaks to the program instead found an administrator more than willing to torpedo the fragile national program if one of the most anti-Trump states didn't come to heel.

Pruitt proposed a new science policy that would exclude major public health studies while still accepting industry-backed research, a policy Republicans failed for years to pass out of Congress. He kicked academic researchers receiving funding from EPA off of key advisory boards, often replacing them with industry representatives. He made key policy changes to permitting rules and a key air quality program long sought by industry groups who said EPA was restricting their growth. He launched a review of how EPA calculates costs and benefits, a move that could make it harder to economically justify major regulations.

And he elevated climate change as a culture-war issue in a way that previous Republican administrators avoided.

Pruitt told POLITICO that he didn't even understand when critics called him a "climate denier" in an interview last summer. "What does it even mean? That's what I think about it. I deny the climate? Really? Wow, OK. That's crazy, in my view," he said.

As Hurricane Irma throttled Florida in 2017, the second of three major storms to devastate parts of the U.S. last year, Pruitt told CNN that it was "misplaced" to ask about climate change's effects on extreme weather during the disaster.

And Pruitt routinely criticized the "environmental left" for focusing too much on climate change to the detriment of other environmental problems like Superfund clean-ups and water infrastructure — although green groups said he failed to lead on those issues as well.

The climate change positioning helped Pruitt gain the ear of Trump, who had called the phenomenon a hoax created by the Chinese to disenfranchise U.S. manufacturing.

Pruitt outmaneuvered other top administration officials, including Tillerson and Trump economic adviser Gary Cohn, to convince Trump that the Paris agreement was a bad deal that put America second. Trump then made the U.S. the only nation on Earth to ditch the Paris climate agreement.

Unsurprisingly, Pruitt's rapid rise and strong conservative pedigree drew talk of future political runs.

Although Pruitt eschewed this year's Oklahoma gubernatorial race, many observers suspected he would be the top choice in 2020 to replace Sen. Jim Inhofe (R-Okla.), who has not said whether he will run again but will turn 86 that year. Rumor swirled that the Senate gig would groom Pruitt for a 2024 presidential run, and Pruitt held meetings with politically connected people who could one day be useful for such a campaign, including a company linked to GOP megadonor Sheldon Adelson and an Indiana coal executive-slash-Republican fundraiser.

But Pruitt's political ambitions and penchant for secrecy eventually came back to bite him.

AMERICAN OVERSIGHT

His behind-the-scenes lobbying for Sessions' job earlier this year alienated him to top White House officials, and the slow drip of negative headlines about his travel, spending and hiring irritated them further.

But in late March, the news about his lobbyist-connected condo deal opened the floodgates to a seemingly endless stream of reports about Pruitt's activities.

At first, the drip-drip of damaging stories was embarrassing but manageable.

Then, as part of a media tour that mostly consisted of friendly interviews with conservative outlets, Pruitt found himself forced into defense by a combative Fox News interview. Though the president was publicly supportive of Pruitt, the White House acknowledged it was reviewing his activities.

The investigation launched by Gowdy, the House Oversight chairman planning to retire after this year, showed the first cracks in Pruitt's support on the Hill. Weeks later, Senate Republicans started airing concerns, while Inhofe — a longtime friend of Pruitt's — said he was troubled by reports of Pruitt's past purchase of a large Oklahoma City home from a telecom lobbyist when he was a state senator.

Inhofe, who later said Pruitt had allayed his concerns, praised his fellow Oklahoman's work running EPA in a statement on Thursday.

"He was single minded at restoring the EPA to its proper statutory authority and ending the burdensome regulations that have stifled economic growth across the country," he said. "I was pleased to work with him on critical issues, like pulling out of the Paris Climate Agreement and prioritizing the cleanup of Superfund sites."

If Inhofe ultimately decides to retire but backs someone else to succeed him in 2020, Pruitt's once-clear path to the Senate — and potentially one day the presidency — could be significantly muddied.

Nancy Cook and Anthony Adragna contributed to this report.

Sources: EPA blocks warnings on cancer-causing chemical Back

By Annie Snider | 07/06/2018 05:02 AM EDT

The Trump administration is suppressing an EPA report that warns that most Americans inhale enough formaldehyde vapor in the course of daily life to put them at risk of developing leukemia and other ailments, a current and a former agency official told POLITICO.

AMERICAN OVERSIGHT

The warnings are contained in a draft health assessment EPA scientists completed just before Donald Trump became president, according to the officials. They said top advisers to departing Administrator Scott Pruitt are delaying its release as part of a larger campaign to undermine the agency's independent research into the health risks of toxic chemicals.

Andrew Wheeler, the No. 2 official at EPA who takes over for Pruitt on Monday, also has a history with the chemical. He was staff director for the Senate Environment and Public Works Committee in 2004, when his boss, then-Chairman Jim Inhofe (R-Okla.), sought to delay an earlier iteration of the formaldehyde assessment.

Formaldehyde is one of the most commonly used chemicals in the country. Americans are exposed to it through wood composites in cabinets and furniture, as well as air pollution from major refineries. The new assessment would give greater weight to warnings about the chemical's risks and could lead to stricter regulations from EPA or class-action lawsuits targeting its manufacturers, as frequently occurs after these types of studies are released.

"They're stonewalling every step of the way," the current official said, accusing political appointees of interfering with the formaldehyde assessment and other reports on toxic chemicals produced by EPA's Integrated Risk Information System. Industry has long faulted the IRIS program, the agency's only independent scientific division evaluating the health risks of toxic chemicals, whose assessments often form the basis for federal and state regulations.

The current official and former official requested anonymity out of fear for their jobs and the impact that speaking out could have on the IRIS program.

Interfering with the formaldehyde study is one of several steps Trump's EPA has taken to side with the businesses the agency is supposed to regulate and undermine the agency's approach to science, critics say. Public health advocates also expressed alarm after Pruitt replaced academic scientists with industry advocates on the agency's influential science advisory boards and sought to limit the types of human health research EPA can rely on in rulemakings.

The officials said Trump appointees have required that career officials receive their permission before beginning the required internal review of the formaldehyde study and have canceled key briefings that would have advanced it. That interference came after EPA career scientists revised the study once already last year to insulate it from political controversy, they said.

In a statement, EPA denied that the assessment was being held back.

"EPA continues to discuss this assessment with our Agency program partners and have no further updates to provide at this time," EPA spokeswoman Kelsi Daniell said. "Assessments of this type are often the result of needs for particular rulemakings and undergo an extensive intra-agency and interagency process."

But as far back as January, Pruitt told a Senate panel that he believed the draft assessment was complete.

AMERICAN OVERSIGHT

Five months later, it has yet to see the light of day. Meanwhile, internal documents show, a trade group representing businesses that could face new regulations and lawsuits if the study were released had frequent access to top EPA officials and pressed them to either keep it under wraps or change its findings.

"As stated in our meeting, a premature release of a draft assessment ... will cause irreparable harm to the companies represented by the Panel and to the many companies and jobs that depend on the broad use of the chemical," Kimberly Wise White, who leads the American Chemistry Council's Formaldehyde Panel, wrote in a Jan. 26 letter to top officials at EPA. The panel represents companies including Exxon Mobil and Koch Industries subsidiary Georgia-Pacific Chemicals LLC that could face higher costs from stricter regulations or lawsuits.

Nearly a million jobs "depend on the use of formaldehyde," White's letter argued.

The holdup is attracting attention on Capitol Hill, where Democrats have already expressed alarm, arguing that the Trump administration has allowed politics to interfere in EPA's scientific assessments of threats such as toxic pollution and climate change.

The agency must "move past politics and focus on its job of protecting human health" by releasing the formaldehyde study, Sen. Ed Markey (D-Mass.) said in a statement to POLITICO.

"Because formaldehyde can be found in everything from wood products to women's hair straighteners, the public health risks are substantial," Markey said. "Delaying the EPA's latest assessment of the health risks of formaldehyde only further endangers the health of Americans."

Public health advocates have similarly expressed fears that the Trump administration has allowed EPA to be captured by the industries it regulates. The revelations about the formaldehyde study come after Pruitt removed academic scientists from the agency's influential science advisory boards and in many cases replaced them with industry advocates, and after he proposed a policy to limit the agency's use of human health data while offering a carve-out for confidential industry studies.

"At every corner, you see the agency trying to either minimize the role of science or manipulate the role of science or just ignore the work of scientists in doing the critical work to ensure that human health and the environment is protected," said Jennifer McPartland, a senior scientist with the Environmental Defense Fund's health program.

POLITICO also reported in May that Trump administration officials, including EPA chief of staff Ryan Jackson, sought to delay an HHS study finding that nonstick chemicals pose health dangers at a lower level than EPA has said is safe.

Insiders anticipate few major policy changes under Wheeler, who is widely expected to continue Pruitt's deregulatory agenda and is well-versed in chemicals issues. He began his career in EPA's chemical safety office, and after leaving Inhofe's staff lobbied for a refrigerants manufacturer that was recently acquired by one of the country's major chemical manufacturers, Chemours Co.,

AMERICAN OVERSIGHT

a DuPont spin-off.

Decades' worth of research has linked formaldehyde to nose and throat cancer and respiratory problems, and newer research has suggested the connection to leukemia — controversial conclusions that would gain significant credence if EPA formally adopts them. The new assessment affirms those links to leukemia, nose and throat cancer and other ailments, according to the current and former officials familiar with its findings.

The new assessment could lead EPA to impose stricter regulations of chemicals refineries or wood products and could spur class-action lawsuits from cancer patients attempting to hold companies responsible for their illnesses.

The agency officials said the political aides blocking the assessment include Jackson and Richard Yamada, a former staffer for House Science Chairman Lamar Smith (R-Texas) who is now a top official in EPA's Office of Research and Development. And they said Nancy Beck, who criticized the IRIS program in her previous job as a top chemical industry expert, is now helping to stymie the program's assessments in her new post as head of EPA's chemical safety office. Jackson, Yamada and Beck did not respond to requests for comment.

The EPA spokeswoman disputed the accusations and said Yamada and Jackson have in fact requested briefings on the assessment.

The current EPA official told POLITICO that political appointees have managed to avoid creating written evidence of their interference with the formaldehyde assessment by refusing to send emails or create other records that could eventually become public, instead using what the official described as "a children's game of telephone."

By blocking the report at the first step of the IRIS review process, political appointees are keeping it from being reviewed by the National Academies of Sciences, an independent panel of the country's top scientists that must weigh in on all such risk assessments. EPA has already paid the academies $500,000 for that review, the highest level of scrutiny a scientific study can receive, but the work cannot start until Pruitt's aides send the study.

"If the administration was really keen on protecting public health, why wouldn't they send this to the National Academy and give it a really good review?" the former EPA official asked. "If it survives that review, then there's a public health problem that needs to be dealt with, and if it doesn't survive the review, then they can point the finger at IRIS and say, 'You're dead.'"

The former official said there would be only one reason not to ask the country's top experts whether they agree with the analysis: "You don't want the answer."

Public health advocates say the administration's attacks on science have had especially significant implications for the IRIS program. The small office of about 35 experts pores through the huge body of existing research on chemicals, including industry-backed studies aimed at proving the substances safe, to independently assess their risks. While purely scientific, the program's reviews are looked to by regulators not just at EPA, but also in the states and around

AMERICAN OVERSIGHT

the world, often paving the way for new or more stringent regulations.

But industry has long targeted the program, arguing it uses an opaque process to decide which studies to rely on and which research to give credence to when findings conflict.

The American Chemistry Council, Beck's former employer, spent more than $7 million last year lobbying EPA and Congress on issues including IRIS, formaldehyde and the policy to limit EPA's use of human health research. Chemicals manufacturers, including Hexion Inc., one of the country's largest manufacturers of formaldehyde, have also spent tens of thousands of dollars on lobbying related to the program this year.

A National Academies panel agreed with some of industry's criticisms of the IRIS program in a blistering review of an earlier iteration of the formaldehyde assessment that recommended major changes to how IRIS decides how much weight to give conflicting studies, although it did not attack the substance of its findings about the health effects of formaldehyde. Critics of the IRIS program have pointed to that review frequently as they have sought to kill it, including in an appropriations battle this spring. The EPA spokeswoman also pointed to that assessment in her statement. "The National Academy of Science and Congress in legislative reports have for years been highly critical of EPA's previous assessments involving formaldehyde," she said.

But EPA has overhauled the program since then, hiring a new director for IRIS and a new head of the National Center for Environmental Assessment, in which it is housed. The changes have received high marks from the National Academies in two more recent reviews, one in 2014 and one this past April. The latest formaldehyde assessment is expected to demonstrate further progress implementing the academies' recommendations, potentially undermining industry critiques of the overall IRIS program if it were to be released.

Although efforts to kill EPA's independent scientific arbiter have so far failed, EPA officials and public health advocates say the program has been significantly hobbled under an administration with close ties to the chemicals industry.

White, the top staffer for the American Chemistry Council's Formaldehyde Panel, wrote EPA three times between September 2017 and January 2018, urging the agency to incorporate industry-funded research that found no link between formaldehyde and leukemia, and arguing that the studies shifted the scientific consensus away from the conclusion that it does. In November, Pruitt appointed her to the agency's influential Science Advisory Board.

Less than a week after the council's Jan. 24 meeting with EPA, Pruitt himself confirmed that the report had been complete for months. During a Senate hearing at the end of January, Markey asked Pruitt for an update on the formaldehyde assessment, saying it was his understanding "that the EPA has finalized its conclusion that formaldehyde causes leukemia and other cancers and that [the] completed new assessment is ready to be released for public review, but is being held up."

"You know, my understanding is similar to yours," Pruitt replied, promising to follow up.

AMERICAN OVERSIGHT

Markey reminded Pruitt of the exchange in a May 17 letter. In a response Thursday, the agency's principal deputy assistant administrator for science, Jennifer Orme-Zavaleta, said EPA "continues to discuss the formaldehyde assessment internally and has no further updates to provide at this time."

Trump unleashes in Montana Back

By Matthew Nussbaum | 07/05/2018 07:53 PM EDT

President Donald Trump went on offense on Thursday at a campaign-style rally in Montana, deriding the state's Democratic senator but also launching attacks against the Justice Department, the media, Hillary Clinton, Sen. Elizabeth Warren, the "Me Too" movement and more.

He previewed themes he will highlight as he works to unseat Democratic senators in the midterm elections, while returning to many of his favorite 2016 attacks.

"It's time to retire liberal Democrat Jon Tester," Trump declared to a raucous crowd during the hourlong address in Great Falls, Montana. "A vote for Jon Tester is a vote for Chuck Schumer, Nancy Pelosi and the new leader of the Democrat Party Maxine Waters."

Trump slammed Tester for voting against the repeal of the Affordable Care Act, voting against a major tax cuts bill and for voting no on legislation to ban late-term abortions.

"You wouldn't think he'd play very well out here. How did he get elected?" Trump wondered aloud. "You can right your wrong in November."

He also returned to scathing attacks on the news media just one week after a gunman killed five journalists at a Maryland newspaper.

He derided the press as "fake news," "bad people" and "so damn dishonest."

"They're fake," he said, pointing at the press area in the arena. "These are really bad people."

In a winding speech, Trump also accused the Justice Department of corruption, bragged about his 2016 election win, spoke about his upcoming meeting with Russian President Vladimir Putin and declared that Rep. Maxine Waters, a frequent Trump critic, has an IQ in the "60s."

He repeated, falsely, that he was the first Republican candidate to win Wisconsin since 1952 and repeated his unfounded conspiracy theory that there was extensive voter fraud during the 2016 election. He also mocked Warren at length, deriding Massachusetts Democratic senator as "Pocahontas" and saying he would get her to take a DNA test if she runs against him in 2020 —

AMERICAN OVERSIGHT

though he added derisively he would do it carefully because of the "Me Too era."

Warren hit back in a tweet, saying the Trump administration is "conducting DNA tests" on children separated from their families at the border.

The nearly hourlong address was the type of unscripted speech in which Trump delights, riling his base beneath banners reading "Promises Made, Promises Kept."

Trump carried the state by 20 points in 2016, but Republicans face a tough fight to unseat Tester in the state in 2018. Tester is facing off against Republican nominee Matt Rosendale, the state auditor and a former member of the Montana Legislature.

Tester, the top Democrat on the Senate Veterans Affairs Committee, has been on the receiving end of personal barbs from Trump after he played a crucial role in sinking Trump's nominee for Veterans Affairs secretary, White House physician Ronny Jackson.

Trump spoke at length about the Jackson debacle, accusing Tester of "shameful, dishonest attacks on a great man."

The attacks were similar to those Trump made against Tester in the midst of the controversy.

"Allegations made by Senator Jon Tester against Admiral/Doctor Ron Jackson are proving false," Trump tweeted in April as damaging reports about Jackson were emerging. "The Secret Service is unable to confirm (in fact they deny) any of the phony Democrat charges which have absolutely devastated the wonderful Jackson family. Tester should resign."

"Tester should lose race in Montana. Very dishonest and sick!" Trump added on Twitter.

The invective does not seem to have bothered Tester, who took out full-page newspaper ads in the state Thursday that read: "Welcome to Montana & Thank You President Trump," and listing "Jon's 16 bills signed into law by President Trump" — a clear attempt to show the state's Trump-friendly voters that the senator can work with the president.

Trump is scheduled to travel to his golf club in Bedminster, New Jersey, after the rally. He told reporters he will meet over the weekend with Vice President Mike Pence and staff ahead of Monday's planned announcement of his Supreme Court nominee to fill the seat vacated by Justice Anthony Kennedy.

House readies Financial Services, Interior-Environment spending bills for floor Back

By Sarah Ferris | 07/05/2018 02:41 PM EDT

AMERICAN OVERSIGHT

House GOP leaders are planning to bring another spending bundle to the floor this month, according to a notice posted today by the Rules Committee.

The House's next funding package will wrap together its fiscal 2019 Interior-Environment, H.R. 6147 (115), and Financial Services, H.R. 6258 (115), spending bills. It is slated for floor action the week of July 16, one week after Congress returns from its July Fourth recess.

It would be the House's second so-called minibus of the fiscal year, after approving a three-bill bundle, H.R. 5895 (115), last month, which included Energy-Water, Military Construction-VA and Legislative Branch. The House also passed a bipartisan Defense spending bill (H.R. 6157 (115)) just before leaving for recess.

Both the Interior-Environment and Financial Services bills are flat-funded compared to current spending levels, though not all agencies and programs would see the same levels. The Environmental Protection Agency, for instance, would be cut by $100 million, while the Internal Revenue Service would see an increase of $186 million.

Unlike the Senate's version of those two bills, the House bills include partisan riders, such as a full repeal of the Obama-era Waters of the United States rule.

If the second minibus succeeds, the House will have passed six out of 12 spending bills. The end of the fiscal year is Sept. 30.

Perry's 'national security' push for grid draws skepticism on the Hill Back

By Darius Dixon | 06/19/2018 04:21 PM EDT

The Trump administration is having a hard time winning over skeptics to its claim that the retirement of coal-fired and nuclear power plants poses a national security threat.

For more than a year, Energy Secretary Rick Perry has argued that letting those struggling generators shut down would threaten the power grid's ability to bounce back from an attack or severe storm. Although he's failed to persuade federal power regulators to prop up the plants, Perry is pushing that argument with the National Security Council in an effort to head off new closures.

Some congressional Republicans said though they are sensitive to the national security concerns and woes of the coal industry, they doubted the grid faces the dire situation that Perry has predicted, and they are wary of intervening in the energy markets.

AMERICAN OVERSIGHT

"I'm a Navy guy. I want our country secure," said Rep. Pete Olson (R-Texas). "But their arguments haven't been about security. It's been about propping up coal and nuclear power."

Olson authored the legislative language that was added to the 2015 FAST Act and expanded Perry's ability to intervene in grid operations during an emergency. But he said the Energy Department's arguments, contained in paper that leaked earlier this month, failed to convince him that shutting down money-losing plants presented a threat to national security.

"A crisis to me means the power is going out. But to support some jobs in some parts of the country, eh, that's not what the bill is designed to do," he said. "Our bill was just to deal with crisis, not to deal with this."

His comments echoed the sentiments of Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska), who told the committee last week she had "concerns" about DOE interfering in the power markets.

Coal-fired power plant closures slowed in 2017, but they are expected to accelerate next year with 12.5 gigawatts of capacity expected to shut down, according to Bloomberg New Energy Finance. That figure is near the record retirements of 15 GW set in 2015. Energy experts and even a Perry-directed DOE analysis last year put blame for the plants' demise on stagnant power demand and the rise of natural gas and renewables.

But the draft DOE paper that recently leaked showed that the agency has considered using its authority under the Federal Power Act's 202(c) provision to "temporarily delay retirement of fuel-secure electric generation resources" while threats to natural gas and electric infrastructure are assessed. And it also considered using the Defense Production Act to require power purchases from endangered plants in an effort to put off shutdowns for two years.

President Donald Trump has repeatedly told Perry to step in to help the plants, including earlier this month when he directed Perry to take "immediate steps" to staunch coal and nuclear plant retirements. He called on the former Texas governor to hold a news conference to announce a plan.

It's not the only issue where the Trump administration has invoked "national security" to defend a controversial action. Trump has threatened to use a trade law that leverages national security to impose tariffs on imported vehicles, the same law the administration used to to put tariffs on steel and aluminum.

"Let's face it, there's an awful lot of stuff being lumped into national security," former Obama Energy Secretary Ernest Moniz told POLITICO. "How this works out, I don't know. But I do know we need to ... do appropriate analyses when called for that do not have national security being used willy-nilly to accomplish all kinds of goals that are not necessarily the right ones."

Moniz acknowledged Perry had wide latitude under the law to declare a grid emergency, but he said that didn't absolve the administration from needing to prove there's a real crisis on the power grid.

AMERICAN OVERSIGHT

"Reliability and resilience are public goods. We just haven't seen any analysis that suggests that this is a pathway that's needed to address that," he said.

Jason Bordoff, who served as Obama's senior National Security Council aide for energy and climate, said he fears the current fight could drag the real threat of cybersecurity into the political fray.

"The bigger risk would be a very legitimate issue of the cyber vulnerability of the grid becomes politicized because it gets wrapped up in this policy objective to save the coal industry as well as nuclear," said Bordoff, who is now director for the Center on Global Energy Policy at Columbia University.

Even Rep. Joe Barton, a longtime stalwart Perry ally, said he was skeptical of DOE's insistence that the grid was facing a national security threat from the plant closures.

"They're scrounging around for a way to keep some of these nuclear plants and coal plants viable and they're using that particular argument," the Texas Republican said. "To me, it's not persuasive, but I understand what they're trying to do."

There are real national security threats against the electric grid from electromagnetic pulses, physical attacks and cyber intrusions, Barton said, adding that "in most cases, it's a mistake to use a national security argument to keep a plant in operation that normal market forces would probably close."

Other Perry allies weren't sure how effective the Trump administration's strategy would be. GOP lobbyist Mike McKenna, who helped run Trump's DOE transition team, said the agency laid out the "single best set of arguments for preserving coal and nuclear generation." Still, he said, the options laid out in the DOE document probably would not achieve the protection that coal and nuclear advocates are seeking. And the national security arguments didn't seem to be gaining much traction.

"The national security angle has its advantages and its limits — not the least of those is that not too many people can and do make the argument that national security is really impaired by the closure of coal power plants," he said in an email. "It would probably be better if advocates focused on the potential over-reliance on one source (natural gas) in both electricity generation, and, if utilities get their way, in transportation fuels."

FERC shot down a regulation from Perry aimed at protecting the coal and nuclear generators earlier this year, and FERC commissioners told a Senate hearing last week that the grid faced no imminent threat, drawing praise from industry groups.

Deputy Energy Secretary Dan Brouillette argued that national security has always been DOE's focus, and he said that the agency's critics aren't seeing the whole picture from their industry's silos. "That's what they get paid to do. But that's not what the secretary gets paid to do and we're going to approach this with a broader view," he told POLITICO.

AMERICAN OVERSIGHT

And he shrugged off comments from FERC commissioners that the electricity markets they oversee were operating efficiently and offered the best way to address security concerns.

"Is the market a factor here at the end of the day? Yes, it is. But we're not in this to have an economics classroom debate about theories of markets," he said. "The markets, in some respects, are not designed to produce a national security outcome."

Brouillette also said the White House had not given it a deadline, and there was no decision yet on whether to invoke any authorities.

"There has been no decision and we're [not] just working backwards," he said. "If we get to the point where there's a proposal or a proposed solution to a problem that we find, then perhaps Congress has a role. But at this point, we're nowhere near that stage."

For FERC and its supporters, countering the DOE claim that national security is at stake may take more than technical arguments. Sarah Ladislaw, who directs the Center for Strategic and International Studies' energy and national security program, said many of the rebuttals from FERC commissioners so far were akin to "bringing a spoon to a knife fight."

"The idea that market efficiency is supposed to trump national security is exactly the reason why national security provisions exist. They're there to protect things that may not make economic sense. ... I think it's an entirely different game from a legal perspective," Ladislaw said. "It's really hard to prove that a national security measure is bogus."

Oregon Sen. Ron Wyden said he would stick to the economic arguments and pointed out the high potential cost of DOE's proposal, even as the administration sought to change the conversation.

"Around here, if you can trod out national security for just about anything ... the leverage goes to you," he said. But, he added, "I'm pounding the ratepayer issue [because] that's the one issue that I think puts a stake right in the guts of their argument."

And other Democrats are fuming that the agency is even considering the use of its rarely tapped emergency authorities.

"It's about abuse of power. You can't just start claiming a national security justification that clearly has nothing to do with national security, and that's a very dangerous road to go down," said Sen. Martin Heinrich (D-N.M.).

DOE names Tripodi as acting EERE chief Back

AMERICAN OVERSIGHT

By Darius Dixon | 07/05/2018 03:24 PM EDT

Cathy Tripodi has been named the Energy Department's acting assistant secretary for energy efficiency and renewable energy while the Trump administration's permanent pick awaits confirmation, according to an email obtained by POLITICO.

Dan Simmons, who had been EERE's top political appointee for more than a year, was nominated last month by the White House to officially fill the job. "As the confirmation process moves forward, Daniel has moved to Environmental Management to serve as an advisor to their leadership team," Alex Fitzsimmons, who has been Simmons' chief of staff, wrote in an email to EERE staff today.

Tripodi joined DOE in January 2017 and has been the director of DOE's Lab Operations Board, which aims to coordinate research and mission objectives between the agency headquarters and its far-flung national laboratories. She has been named as principal deputy assistant secretary in EERE and will serve in the job temporarily, while also retaining her position as Lab Operations Board director.

After working as a policy adviser to then-FERC Chairman Pat Wood in the mid-2000s, she held a number of positions in state government, including business affairs director for North Carolina and energy director in Indiana.

Greenwire reported Tripodi's appointment earlier today.

WHAT'S NEXT: Simmons had a nomination hearing late last month before the Senate Energy and Natural Resources Committee, but no confirmation vote has been scheduled.

Puerto Rico governor to challenge federal board in court Back

By Colin Wilhelm | 07/05/2018 10:48 AM EDT

Puerto Rico Gov. Ricardo Rosselló said today his government will go to court to challenge the authority of the U.S. territory's federal oversight board to impose policies on the commonwealth.

The board, established by Congress to address Puerto Rico's debt, mandated cuts to pensions and government spending in its most recent recovery plan. Proposed changes to labor laws, in part to make it easier to hire and fire employees, have also become a hotly contested issue.

Rosselló said in a release that he would challenge the board's ability to do anything more than make recommendations.

AMERICAN OVERSIGHT

In a statement issued this morning, the board said it would "vigorously defend" its authority.

The lawsuit runs contrary to statements by the author of the debt-relief law that created the board. In an amicus brief submitted last Friday in a separate case, Rep. Rob Bishop (R-Utah) said Puerto Rico must comply with the plan laid out by the federal board.

In his release today, Rosselló said lawyers for his government would request an injunction to halt the board's actions, which he characterized as usurping the power of local elected officials, while the case plays out in court.

The governor has intermittently worked alongside and clashed with the board since he took office at the beginning of last year. His stance today is similar to one he took with the board in court over similar battle lines last year, only for the fight to be put on hold as hurricanes devastated the island.

ABOUT ENERGYWIRE – The Transformation of the Energy Sector

Energywire is written and produced by the staff of E&E News. Energywire is designed to bring readers deep, broad and insightful coverage of the transformation of the energy sector. Energywire focuses on the business, environmental and political issues surrounding the rapidly expanding unconventional energy industry and the numerous factors -- from expanding natural gas use to renewables and more -- that are altering the traditional electric utility industry. Energywire publishes daily at 9:00 a.m.

Subject: Morning Energy, presented by the American Petroleum Institute: Parsing Pruitt's 'war on lead' — Jackson takes responsibility on raises — Mission impossible? Replacing Pruitt

By Kelsey Tamborrino | 04/10/2018 05:45 AM EDT

With help from Eric Wolff, Annie Snider, Alex Guillén, Anthony Adragna and Ben Lefebvre

PARSING PRUITT'S 'WAR ON LEAD': Amid the wave of recent scandals, EPA Administrator Scott Pruitt and his supporters have touted regulatory rollbacks and a focus on drinking water policy as big victories for the Trump administration. "Record clean Air & Water while saving USA Billions of Dollars," President Donald Trump tweeted over the weekend, in support of the embattled administrator. But details on Pruitt's water plans remain sparse, Pro's Annie Snider reports, leaving critics to wonder how much he can achieve while also seeking to shrink the agency.

It is unclear exactly what air and water "record" Trump was referring to in his tweet, but it is likely too early to make such definitive claims, Annie reports. Only limited data on drinking water quality under the Trump administration is available, and air pollution has been declining for more than a decade. But before Pruitt was engulfed by negative headlines, the EPA chief touted his ambitious goals to update aging infrastructure and eradicate dangerous chemicals from drinking water. He's since leaned into such plans in interviews with conservative media outlets when defending himself against accusations of ethical missteps.

Pruitt brought together high-level officials from across the government earlier this year to launch his "war on lead," and in May is set to convene a nationwide summit of drinking water officials to address chemical contamination. Local drinking water agencies are glad to see Pruitt pay attention, Annie reports, but many still wonder how much he'll be able to get done, with a White House that has indicated Pruitt should be able to accomplish his goals without any new money. Read more.

IT'S TUESDAY! I'm your host Kelsey Tamborrino. QEP Resources' Shane Schulz was first to identify Gilbert Stuart's portrait of George Washington as the one saved by former first lady Dolley Madison during the War of 1812. For today: What are the five countries in Europe that don't have an airport? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

CAUGHT BETWEEN AN EMAIL AND AN INTERVIEW: EPA chief of staff Ryan Jackson says he takes responsibility for the controversial raises given to two of Pruitt's top aides, Pro's Emily Holden reports. The Atlantic reported Monday on the existence of an internal EPA email between Sarah Greenwalt, senior counsel to the administrator who previously worked with Pruitt in Oklahoma, and EPA HR. The email confirms Pruitt knew of and approved Greenwalt's raise, which the Atlantic reports is roiling agency staff and contradicts Pruitt's comment to a Fox News interviewer when he said "I didn't know they got the pay raises until yesterday."

AMERICAN OVERSIGHT

In a response to the report, Jackson distanced Pruitt from the salary decision. "Administrator Pruitt had zero knowledge of the amount of the raises, nor the process by which they transpired. These kind of personnel actions are handled by EPA's HR officials, Presidential Personnel Office and me," Jackson said in a prepared statement Monday. Read more.

EPA ETHICS OFFICIAL REFERS TO IG: Kevin Minoli, EPA's top ethics official, has sent ethics concerns regarding Pruitt to the Office of Inspector General for further investigation, according to a letter sent Monday and obtained by Buzzfeed. Minoli, a longtime EPA attorney, was responding to the Office of Government Affairs' acting director, David Apol, who on Friday urged him to further review issues like Pruitt's housing, spending and the raises granted to aides. In his response, Minoli writes that he lacks independent investigative authority. "Consequently, in an instance in which the EPA ethics office lacks sufficient evidence to assess fully an ethics matter, we have a long-standing practice of referring it to the" IG, he wrote.

SWAMP THINGS: Senate Minority Leader Chuck Schumer joined his House counterpart Nancy Pelosi in calling for Pruitt's exit on Monday. "President Trump says he's going to drain the swamp. Pruitt characterizes the swamp in just about all of his actions, and Trump sticks by him," Schumer said from the Senate floor. "If you want to drain the swamp, Mr. President, get rid of Mr. Pruitt." The Environmental Working Group calculated there are now 91 bipartisan members of Congress calling for Pruitt's removal. More here from your ME host.

LUKEWARMLY STAND BY YOUR MAN: A bunch of GOP senators told ME Monday that legitimate questions had been raised about Pruitt's conduct, but none of them would go so far as to call for his resignation. "I know there a lot of questions that are being asked that sound like they need to be responded to," Senate Energy Chairman Lisa Murkowski told ME. "The questions that have come up are legitimate questions to have, so we'll have to wait and see what his answers are to those," Sen. John Boozman said.

But members of Senate leadership largely dodged. Sen. John Cornyn, the chamber's Majority Whip, wouldn't directly weigh in on the scandals: "It's the president's decision not ours." And Sen. John Barrasso, chairman of the EPW Committee, said Pruitt would probably come before his panel again this year, but declined anything more specific. Others defended the embattled EPA chief completely, with Sen. Roger Wicker arguing Pruitt's "vilified because he's doing his job and the left is doing everything they can to make him not succeed."

Sen. Joe Manchin, one of the few Senate Democrats who backed Pruitt's confirmation, said he didn't regret his vote, but added that the administrator should answer questions about his conduct. "He has to be held accountable," Manchin told reporters. Asked if he was surprised Pruitt still had a job, Sen. Brian Schatz told ME: "I'll just say that other secretaries in the same administration have left for less."

MISSION IMPOSSIBLE: With a shrunken Republican majority in the Senate, lawmakers would struggle to confirm any new EPA administrator, POLITICO's Burgess Everett and Anthony Adragna report — let alone someone as aggressive about undoing former President Barack Obama's environmental rules and regulations. "Anything is going to be hard right now at

AMERICAN OVERSIGHT

50-49 to confirm, especially if it's a high profile position," said Sen. John Thune of South Dakota, the No. 3 GOP leader. Read the full story here.

MORE SUPPORT FOR WHEELER: Republican Sen. Susan Collins, who opposed Pruitt's selection to run EPA, said she intends to back his selection for deputy administrator, Andrew Wheeler. "Unless there is some new adverse information, based on my review of his record I do intend to support him," she told ME. That further clears the path for Wheeler, who has secured the support of at least two moderate Democrats as well.

MOST ENDANGERED: Rivers threatened by oil, gas, agriculture and mining development dominate this year's list of Most Endangered Rivers, the annual rundown by green group American Rivers. Mississippi's Big Sunflower River list is ranked in the top slot, thanks of efforts by the state's congressional delegation to revive a vetoed Army Corps of Engineers flood control project that would have drained tens of thousands of acres of wetlands in the watershed. A rider supporting the project failed to make it into the fiscal 2018 spending bill last month — the last one managed by Mississippi Sen. Thad Cochran before he retired. Read the report here.

** **A message from the American Petroleum Institute:** Safe energy exploration and development in the Outer Continental Shelf could bring significant jobs, investments, and state revenue for public education and infrastructure to coastal states and across the nation, as well as strengthen our national security. Recently released studies highlight the potential economic benefits here: http://bit.ly/2FPgybN **

THE RFS MEETING THAT DIDN'T ROAR: The participants at a White House meeting Monday on the Renewable Fuel Standard know what happened, but hardly anyone else does. One ethanol source told ME that Trump had punted the issue to Congress, but a Growth Energy spokeswoman said, "Our understanding is that they will continue to explore options." Reuters Jarrett Renshaw tweeted that Trump had decided to allow another three months for discussions. Growth, an ethanol trade association, put out a statement saying, "We are encouraged that the White House continues to rebuff Senator [Ted] Cruz's efforts to place a cap on RINs, which would destabilize the RFS and devastate struggling farm communities."

So what now? If Trump has indeed decided not to decide — at least for a while — then all eyes turn to Sen. John Cornyn and Rep. John Shimkus who have been working on a draft legislation that would overhaul the RFS. The Senate has a world of work to do, from approving nominees to run the State Department and the CIA to funding the government in September, so it's not clear how anything could get to the floor before — at the earliest — a lame-duck session after the November election.

CONFIRMED: James Edward Campos was confirmed by voice vote Monday to be director of the Office of Minority Economic Impact at the Energy Department. The Senate also confirmed Theodore Garrish Monday by voice vote to be assistant secretary of Energy for international affairs, and James Reilly to be director of the United States Geological Survey. Read more.

TWEET FOR TAT: Interior press shop's relationship with New Mexico conservationists seems to be ... not great. Nonprofit Trust For Public Land took to the social platform Monday afternoon

AMERICAN OVERSIGHT

to thank BLM and New Mexico lawmakers — Rep. Ben Ray Luján and Sens. Tom Udall and Martin Heinrich — for helping to add 600 acres to the Rio Grande del Norte National Monument. DOI followed up hours later: "Too bad they pulled their quote from a joint press release at the last minute. Guess they aren't all that interested in collaborative conservation. SAD," the official DOI press secretary Twitter account posted. "We're extremely proud of our collaboration with both Democrats and Republicans to ensure everyone has access to public lands," TFPL spokesman Keith Maley said, declining to comment further "on a press release we didn't issue."

A GREENER APPLE: Apple Inc. on Monday said all of its global facilities, which include data centers, Apple stores, and offices, are running on 100 percent renewable electricity. "We're going to keep pushing the boundaries of what is possible with the materials in our products, the way we recycle them, our facilities and our work with suppliers to establish new creative and forward looking sources of renewable energy because we know the future depends on it," CEO Tim Cook said in a statement.

ICYMI: **'CALL YOUR SENATORS':** An ME reader flagged a 30-second ad touting Interior Secretary Ryan Zinke that aired in D.C. last month. The ad prompts viewers to "call your senator" to demand they back Zinke and funding to repair national park infrastructure. But ME is a little skeptical that the TV spot is really about a specific policy, given that a) sources told us the ad only aired in D.C., which doesn't have any local senators to call, b) the footage reserves its longest shot for a smiling Zinke, and c) it aired around the same time a polling firm recently asked people in Iowa what they thought about the former Montana congressman and Navy SEAL. ME's source said American Economic Freedom Alliance paid for the spot. Little is known about the group, but it may have relationships with Vice President Mike Pence, according to the Indianapolis Star.

GREENS NOT FANS OF SCOTT'S SENATE RUN: Florida Gov. Rick Scott announced Monday he's running for Sen. Bill Nelson 's seat — drawing the immediate condemnation of environmentalists who say the two-term governor has refused to acknowledge climate change, among other issues, Pro Florida's Bruce Ritchie reports. They instead accused Scott of "greenwashing" his record in the state. "I think he will try to put everything he can out there to say he is an environmental champion," Frank Jackalone, the Sierra Club's Florida chapter director, told Bruce. "But we look at the bigger record and he is not [an environmental champion]." Read the story.

GREENS: **REJECT POMPEO:** More than 200 environmental groups called on senators today to reject Mike Pompeo's nomination for secretary of State. The letter, organized by the Food & Water Watch, cites Pompeo's history of statements doubting the science behind climate change. Read the letter here.

HARD BLOCK CAFE: Democratic Sens. Jeff Merkley, Ed Markey, Ben Cardin and Michael Bennet will hold a press conference today alongside clean air advocates to discuss EPA's recent announcement that it intends to rollback Obama-era fuel economy standards. Janet McCabe, former acting assistant administrator of EPA's Office of Air and Radiation, will also join the event.

AMERICAN OVERSIGHT

TRUE CRIME: The Atlantic Council's Global Energy Center released a new report today on illicit maritime activity related to the use of hydrocarbons. The report focuses on crimes including the small-scale smuggling of subsidized fuel and the hijacking of oil tankers. Read it here.

Stories from POLITICO Pro

Pruitt gets Trump's tweet of approval: 'Scott is doing a great job!' Back

By Brent D. Griffiths | 04/07/2018 08:37 PM EDT

President Donald Trump defended embattled Environmental Protection Agency Administrator Scott Pruitt on Saturday evening, tweeting that his Cabinet official is doing a "great job."

"While Security spending was somewhat more than his predecessor, Scott Pruitt has received death threats because of his bold actions at EPA," the president wrote on Twitter. "Record clean Air & Water while saving USA Billions of Dollars. Rent was about market rate, travel expenses OK. Scott is doing a great job!"

For months, Pruitt has been the subject of unflattering headlines about his lavish spending on travel and security, and in recent days, it was revealed that the EPA head was renting a condo from a lobbyist couple. He is facing multiple EPA inspector general investigations.

POLITICO reported Friday that morale at the agency has suffered as the various scandals and the leaks that feed them echo around the building.

Trump's tweet underlines the defense many of Pruitt's allies have made in recent days, which is that the former Oklahoma attorney general is making progress in implementing the president's agenda at the agency through proposed rollbacks of Obama-era rules and the exit from the Paris

AMERICAN OVERSIGHT

climate accord.

Amid turmoil, Pruitt takes aim at drinking water problems Back

By Annie Snider | 04/10/2018 05:01 AM EDT

As EPA Administrator Scott Pruitt has fought to keep his job amid a mounting ethics scandal, he has pointed not just to his regulatory rollbacks as proof of his success, but also to his focus on drinking water safety.

Details are sparse, and critics wonder how much Pruitt can achieve in light of his parallel goal of shrinking the agency. But well before he was engulfed by negative headlines last week, Pruitt had outlined ambitious goals to update aging infrastructure and get dangerous chemicals out of drinking water — the kinds of things he says received too little attention from the Obama administration.

Pruitt leaned heavily on those plans in interviews with conservative media outlets in the past few days, as he defended himself from accusations that he had misused taxpayer dollars on first class travel and pricey office decor, and got a cut-rate deal on an apartment from a lobbyist friend.

"Lead in our drinking water: It's a concern, a tremendous concern on the health risk to our children, the mental acuity levels of our children," he said in an interview with the Washington Times last week. "You would think that would be a major priority, right? It hasn't been."

Pruitt brought together high-level officials from across the government last month to launch his "war on lead," and in May he will convene a nationwide summit of drinking water officials to address growing concern over contamination by chemicals used in Teflon and flame retardants.

Local drinking water agencies say they are glad to see Pruitt paying attention to some of their biggest challenges, but critics wonder how much he will actually get done, especially as the White House tries to slash his agency's budget.

"I'm cautiously optimistic at this point," said Alan Roberson, executive director of the Association of State Drinking Water Administrators. "Two of our big issues have been targeted by the administrator as being important issues. What the outcome is and what the actions are is still to be determined."

So far, the White House has indicated that Pruitt should be able to accomplish his goals without any new money. In fact, EPA's 2019 budget proposal would eliminate funding for its lead risk reduction program and grants to the states for dealing with the neurotoxin, while slashing research on water safety by more than a third. While Congress has shown little interest in

AMERICAN OVERSIGHT

following through with such deep spending cuts, critics say the administration's budget requests undermine Pruitt's pitch.

"Although publicly there's a lot of talk about moving forward with improvements, basically the foundation upon which you would build stronger protections for drinking water — which are the research that's needed and the program staff that are needed — they're really being undermined," said Erik Olson, director of the Natural Resources Defense Council's health program.

President Donald Trump is standing by Pruitt, indicating that his future in the administration is likely safe for now. "Record clean Air & Water while saving USA Billions of Dollars.... Scott is doing a great job!" Trump wrote in a tweet over the weekend.

It is unclear exactly what air and water "record" Trump was referring to, but it is likely too early to make such definitive claims. Only limited data on drinking water quality under the Trump administration is available, and air pollution has been declining for more than a decade. The White House did not respond to a request for comment Monday.

While Pruitt might find positive headlines in summits to discuss drinking water problems, the steps that could actually solve them offer few political wins.

Pruitt's most ambitious effort to date will come when he brings together officials from 56 states and territories for a summit to address growing drinking water contamination around the country by toxic chemicals known as Per- and Polyfluoroalkyl Substances, or PFAS. In a statement on the summit, Pruitt said EPA would provide "critical national leadership, while ensuring that our state, tribal, and local partners have the opportunity to help shape our path forward." But EPA has provided few additional details about the event, scheduled for late May.

Local outcries over PFAS began five years ago in hotspots like Hoosick Falls, N.Y., whose water was contaminated by the plastics industry, and are now spreading as the scope of the contamination has come to light.

The two most well-known substances, PFOA and PFOS, were used for years in Teflon, Gore-Tex, flame retardants and other water resistant products. They are linked with cancer, liver problems and low birth weight. Scientists say virtually everyone has at least trace amounts of the chemicals in their blood, and monitoring results show they are in the drinking water supplies of at least 15 million Americans, but many drinking water managers say they feel ill prepared to explain the risks to residents or offer solutions.

EPA in 2016 issued voluntary drinking water health advisories that drastically lowered the level at which it said the chemicals could pose a threat, but the agency has not issued any mandatory limits on their presence in drinking water. In fact, EPA has not regulated any new drinking water contaminant in more than 20 years, a testament to how difficult it is to impose costly new requirements on drinking water utilities.

In the absence of federal action, a number of states are moving ahead with their own drinking water limits for PFOA and PFOS, although public health advocates say that is no substitution for

AMERICAN OVERSIGHT

EPA regulation. They argue the whole point of the Safe Drinking Water Act was to prevent a patchwork of regulations.

Moreover, some states are powerless to do anything unless EPA does, said Sambhav Sankar, executive director of the Environmental Council of States.

"In those states, where state legislatures have done things like say you can't pass any regulations tighter than EPA's, those states are kind of hamstrung until EPA does something," he said.

ECOS and the Association of State Drinking Water Administrators have both asked EPA for help with PFAS, although they haven't decided whether they want the agency to write regulations, or just offer more research and guidance. But the National Rural Water Association is decidedly opposed to a mandatory limit, arguing that utilities are already committed to doing their best to eliminate the contaminant and shouldn't face potential penalties if they fall short.

PFOA and PFOS are no longer manufactured in the U.S., but the chemical industry has resisted calls to regulate other PFAS that have been used to replace them, which are also cropping up in drinking water supplies and health experts warn might not be any safer. For instance, in North Carolina the DuPont spinoff Chemours Company dumped the PFAS GenX in the Cape Fear River near Fayetteville for years and has pushed back against efforts to curtail its disposal into the community's primary drinking water source.

The FluoroCouncil, which is composed of companies making PFAS, including Chemours, said in a statement that it is "fully supportive of EPA's efforts to evaluate these chemicals," but cautioned that "these newer chemistries have been thoroughly reviewed by regulators who have relied on a robust body of scientific data showing these chemistries can be used safely."

Pruitt has close ties to the chemicals industry, particularly the American Chemistry Council, which runs the FluoroCouncil. The acting head of Pruitt's chemical safety office, Nancy Beck, was previously a top scientist for ACC. President Donald Trump's nominee to head EPA's chemical safety office, Michael Dourson, a former chemical industry consultant, withdrew from consideration last year after North Carolina's two Republican senators refused their support, pointing to drinking water contamination in their state.

With his "war on lead," Pruitt is taking on an even higher profile crisis, after criticizing the Obama administration's response to the contamination of drinking water in Flint, Mich., in 2015 and 2016, when nearly 100,000 residents were exposed to dangerously high levels of lead.

Pruitt last month invited more than a dozen Cabinet secretaries and top-level officials to a meeting at EPA headquarters to develop a federal plan to reduce children's exposure to lead. Attendees included HUD Secretary Ben Carson, Labor Secretary Alexander Acosta and representatives from several other agencies.

Pruitt has said he wants to "eradicate" lead — which can inhibit children's brain development at any level of exposure — but there are no easy options available to him.

AMERICAN OVERSIGHT

EPA has left open the option of requiring all lead piping to be removed as part of its plan to update the Lead and Copper Rule. But work on that update has been underway for more than a decade already, and the schedule to complete the work keeps slipping. A new rule is not expected until at least 2020, and regulators will have to sort through a host of additional issues by then on top of the question of whether to replace lead pipes.

The American Water Works Association estimates it would cost $30 billion to remove and replace all lead piping across the country. That's on top of the roughly $1 trillion needed more broadly to replace aging and failing water infrastructure.

Not only is the federal government unlikely to come up with that kind of cash anytime soon — the Trump administration's infrastructure proposal looked to private and local financing, not federal grants for improving drinking water infrastructure — but even if it did, it could probably only fund replacement of the public pipes, not the lead service lines and plumbing that are owned by homeowners. Furthermore, this type of partial replacement can actually make lead contamination worse in the near term, public health experts say, since the act of replacing water mains can shake up the remaining lead pipes, depositing the contaminant in drinking water.

Michael Keegan of the National Rural Water Association, which has pushed back on a mandate for full replacement, said that lead isn't a widespread danger since most utilities are using corrosion control, and that scarce dollars for upgrades could be better invested in other projects.

"The reason not to mandate full lead pipe service line removal is because people don't want it," he said. "If there's not a problem with lead in their water and they don't feel that the expense of removing the lead service lines is going to have a commensurate public health improvement, they should be allowed to decide that."

Critics are skeptical that Pruitt will take on the thorny issues involved in persistent drinking water problems and argue that Pruitt's much-touted meetings are more about headlines than about action. They say that the chemicals industry has a long history of running out the clock on drinking water regulation.

"Communities across the country are suffering now because of drinking water contamination," New Jersey Rep. Frank Pallone, the top Democrat on the House Energy and Commerce Committee and a congressional leader on drinking water issues, said in a statement. If Pruitt is serious about protecting drinking water, Pallone said, he should update the Lead and Copper Rule and move forward with regulations for PFAS and other emerging contaminants.

"Instead of taking meaningful steps to address drinking water contamination all we have seen from him are delays and distractions," Pallone said.

AMERICAN OVERSIGHT

EPA chief of staff takes responsibility for controversial raises given to Pruitt aides Back

By Emily Holden | 04/09/2018 06:22 PM EDT

EPA chief of staff Ryan Jackson is taking responsibility for controversial raises given to two of Administrator Scott Pruitt's top aides.

Pruitt has been under fire over a report in The Atlantic last week that he used special hiring authority to give hefty pay increases to two political appointees who joined EPA after working for him in Oklahoma. On Monday, the Atlantic cited two administration officials who said one of the employees had sent an email indicating that Pruitt had signed off on her new salary level.

In a response to the latest report, Jackson distanced Pruitt from the salary decision.

"Administrator Pruitt had zero knowledge of the amount of the raises, nor the process by which they transpired. These kind of personnel actions are handled by EPA's HR officials, Presidential Personnel Office and me," Jackson said in a prepared statement Monday.

He said the staffers were to be paid "similar to their peers given their responsibilities over the past year," and that their original salaries started lower than their colleagues' because they had moved to Washington, D.C., from Oklahoma, where salaries are lower.

He added that the raises had been reversed, as Pruitt instructed, and any future changes would go through the White House for evaluation.

Democratic senators are asking an internal watchdog to investigate. The Atlantic reported that Pruitt himself went around the White House to ask for pay increases for two staffers who followed him from his attorney general post in Oklahoma — senior counsel Sarah Greenwalt and scheduling director Millan Hupp. The raises, of $56,765 and $28,130, respectively, were made with authority allowed under the Safe Drinking Water Act, which lets the administrator appoint up to 30 staffers without White House approval.

In an interview with Fox News last week, Pruitt claimed he had no knowledge of the raises and "the officials that were involved in that process should not have done what they did."

The Atlantic also reported that one EPA official heard top political appointees — including Jackson, Greenwalt and Hupp — joking Friday that Pruitt was "bulletproof" and, like Trump, "could stand in the middle of Fifth Avenue and shoot someone" and "get away with it."

Jackson said he didn't recall speaking with those staffers on Friday and said he wouldn't stand by in a conversation where people made that kind of joke.

"It's just flat-out false," he said.

Federal ethics officer presses EPA on 'extremely concerning' allegations against Pruitt Back

By Alex Guillén | 04/09/2018 11:46 AM EDT

The federal Office of Government Ethics on Friday urged EPA's top ethics official to carefully scrutinize the actions of Administrator Scott Pruitt in the face of reports about retaliation against staff members and other ethics questions.

"The success of our Government depends on maintaining the trust of the people we serve," wrote David Apol, the acting head of OGE, in a letter to Kevin Minoli, a career attorney and EPA's top ethics official. OGE released the letter Monday.

Apol specifically flagged Pruitt's $50-a-night rental agreement, travel and security expenses, raises for close aides and the alleged use of an employee's time to look for housing. Apol also noted "extremely concerning reports" in the New York Times that Pruitt demoted staff who questioned him. "If true, it is hard to imagine any action that could more effectively undermine an agency's integrity than punishing or marginalizing employees who strive to ensure compliance with the laws and regulations that safeguard that integrity," Apol wrote.

Minoli last week said he did not have all facts when he initially reviewed Pruitt's rental agreement of ethics violations. In a follow-up memo, Minoli said he had not reviewed Pruitt's actual use of the space, or whether that use raised any ethics questions.

Pelosi calls on Pruitt to resign Back

By POLITICO Staff | 04/06/2018 01:20 PM EDT

House Minority Leader Nancy Pelosi today called on EPA chief Scott Pruitt to resign, saying he has "displayed a staggering ethical blindness."

"EPA Administrator Scott Pruitt's tenure has been a part of the Trump Administration's culture of corruption, cronyism and incompetence. Pruitt must resign," Pelosi said in a statement. "Pruitt has displayed a staggering ethical blindness, and his abuses of office are representative of an

AMERICAN OVERSIGHT

Administration that uses their powerful positions to enrich themselves and their friends."

Pruitt has been the subject of a series of damaging articles in recent days alleging that he rented a $50-a-night condo room from a pair of lobbyists, that he reportedly sidelined aides who questioned his expensive travel and security costs, and that he allegedly asked for sirens and lights to speed up his trips around Washington, including to a trendy French restaurant.

He is also being investigated by the EPA's inspector general for other purported ethical lapses involving his travel and security expenses.

Even though White House officials have been irritated by the scandals, President Donald Trump has continued to publicly voice support for the EPA chief.

Schumer calls on Trump to fire Pruitt Back

By Kelsey Tamborrino | 04/09/2018 04:15 PM EDT

Senate Minority Leader Chuck Schumer called on President Donald Trump today to fire EPA Administrator Scott Pruitt, citing the recent ethical inquiries and questions about the administrator's spending habits.

"President Trump says he's going to drain the swamp. Pruitt characterizes the swamp in just about all of his actions, and Trump sticks by him," Schumer said from the Senate floor. "If you want to drain the swamp, Mr. President, get rid of Mr. Pruitt."

Pruitt has been the subject of a series of scandals surrounding his use of a $50-a-night lobbyist-connected condo, as well as his expensive travel and security costs.

Trump has stood by Pruitt "despite obvious abuses of taxpayer's money and trust," Schumer said. "Why? Well, he likes what he is doing to unwind critical environmental protections on behalf of powerful industries."

In his support of Pruitt, Schumer said Trump is "lowering the bar" on government ethics and accountability.

"What abuse of the American people's trust will President Trump not tolerate if Administrator Pruitt is allowed to continue in his position despite flagrant graft?" Schumer said.

Schumer was discussing the nomination of Andrew Wheeler to be deputy administrator at EPA, which he said he would oppose.

AMERICAN OVERSIGHT

WHAT'S NEXT: Wheeler is expected to get a cloture vote this week.

Mission impossible: Replacing Scott Pruitt Back

By Burgess Everett and Anthony Adragna | 04/09/2018 07:05 PM EDT

There's one big reason Senate Republicans are standing staunchly with Scott Pruitt: Confirming a replacement might be impossible.

Even as the embattled EPA administrator faced another day of difficult headlines on Monday, there is no push from the Senate GOP to shove Pruitt out. Instead, Republicans are gently rapping him for his ethical transgressions and praising his deregulatory regime.

There's no question that GOP senators are growing tired of defending Pruitt. But turning on him would likely backfire, as the shrunken Republican majority would struggle to confirm any EPA administrator, let alone another one as conservative and driven to overturn former President Barack Obama's environmental rules and regulations.

"I don't think that would be easy, let me put it that way," said Sen. Orrin Hatch (R-Utah).

"I assume it'd be very difficult," said Sen. Jerry Moran (R-Kan.).

Pruitt barely got through the confirmation process last time — opposed by Sen. Susan Collins (R-Maine) but lifted to a majority through the support of a pair of red state Democrats. Since then, Republicans have lost a Senate seat in Alabama and Sen. John McCain (R-Ariz.) is recovering from cancer treatment, giving the GOP effectively a 50-49 majority that makes any controversial confirmation a risky bet.

"Anything is going to be hard right now at 50-49 to confirm, especially if it's a high profile position," said Sen. John Thune of South Dakota, the No. 3 GOP leader.

And now the midterms are in sight. Republicans are particularly eager to avoid putting the vulnerable Sen. Dean Heller (R-Nev.) in the position of being the deciding vote on a new EPA chief in the mold of Pruitt. Heller has faced a backlash in increasingly-blue Nevada for confirming some of President Donald Trump's nominees, and a vote on a conservative EPA administrator would offer Democrats another opportunity for outrage.

Apart from the political concerns, there are also practical ones. Senate Republicans are already facing an unwelcome trio of Cabinet confirmations that are all dicey on their own: Mike Pompeo to be secretary of state, Gina Haspel to lead the CIA and Ronny Jackson to helm the Veterans Affairs department.

AMERICAN OVERSIGHT

There are also dozens of lower-level nominees that Senate Majority Leader Mitch McConnell (R-Ky.) is hoping to confirm over the course of the year. Adding a fourth Cabinet confirmation would sap time from the Senate calendar and Republicans of their political capital in a tough election year.

"Our most precious quantity is time. We're pretty well booked. We don't need any extra confirmations," said Sen. Roger Wicker (R-Miss.), a McConnell ally.

Trump has mounted a strong defense of Pruitt, saying over the weekend he's doing a "great job." The president's allies in Congress said that they believe Pruitt is safe, for now.

"There's no vacancy yet," said Senate Majority Whip John Cornyn (R-Texas). "The president has gone out of the way to say he has confidence in him. So I just have to assume he's sticking around."

Of course, ousted Cabinet secretaries from Tom Price to David Shulkin to Rex Tillerson know that the president's support can turn on a dime. And Pruitt's big problem is that the bad headlines keep coming. On Monday, the Atlantic reported on emails that showed Pruitt personally ordered a raise for an aide over the White House's objections.

Moreover, he's faced ethical and management criticisms from the early days of his tenure. Pruitt's been hit for his frequent first-class flights, use of an unprecedented 24/7 security detail, spending $43,000 on a private phone booth and a $50-per-night lease on a Washington condo owned by a lobbyist couple, among other issues.

Those events prompted a federal ethics watchdog Monday to demand the agency's top ethics official closely examine Pruitt's behavior — and a mild rebuke from some Republicans.

"I don't appreciate the way he seems to have abused taxpayer dollars," said Sen. Joni Ernst (R-Iowa).

But supporters say Pruitt had made honest mistakes and deserves a second chance.

"He's had a few troubles. It's hard for anybody who's a mover and shaker not to have some troubles," Hatch said.

Pruitt has used his time atop EPA to launch a sweeping deregulatory push, beginning the process of wiping away Obama-era regulations on everything from power plant emissions to fuel efficiency standards to chemical safety rules for industrial facilities. He's pushed to trim his agency's budget by a third and overseen the reduction in staff to Reagan-era levels.

And he's questioned the scientific consensus that human activity drives climate change, urging a scientific debate on the work underpinning that conclusion.

"I feel that my reservations about Scott Pruitt have proven to be validated over and over. And the

AMERICAN OVERSIGHT

policies that he has pursued are antithetical to the agency," said Collins, the lone GOP senator to oppose Pruitt. Still, she would not say he should go: "It's really up to the president."

Sen. John Barrasso (R-Wyo.), who chairs the Environment and Public Works Committee, said he would refrain from judging Pruitt until the White House completes its probe into his activities.

"In terms of what he's been doing, in terms of rolling back regulations and doing the key administration issues, I'm supportive of his activities," Barrasso said. "We have a lot of other people that need to be confirmed. This is not the time to add another opening on top of that."

Senate confirms USGS chief, two DOE nominations Back

By Anthony Adragna | 04/09/2018 07:39 PM EDT

The Senate today confirmed a new director of the United States Geological Survey and two Energy Department nominees by voice vote.

That means James Reilly, a former astronaut, will become the next director of USGS.

The chamber also confirmed Theodore Garrish to be an assistant Energy secretary for international affairs and James Edward Campos to be director of the Office of Minority Economic Impact.

'He has unlimited money': Scott upends battle for the Senate Back

By Kevin Robillard, Marc Caputo and Burgess Everett | 04/09/2018 05:56 PM EDT

Florida Gov. Rick Scott's long-awaited clash with Democratic Sen. Bill Nelson has the makings of the most expensive Senate race ever — and that spells trouble for Democrats everywhere else.

Strategists in both parties think this race could cost up to $200 million, dwarfing the record $180 million they spent fighting over Pennsylvania in 2016, according to the Center for Responsive Politics. Scott, a multimillionaire, hasn't ruled out spending tens of millions of his own money as he has in the past.

Not only does Nelson lack that luxury, but Democrats are defending nine other incumbents in

AMERICAN OVERSIGHT

states President Donald Trump carried as they challenge for control of the Senate, where Republicans hold a 51-49 edge. And a free-spending Scott campaign in the nation's largest swing state could strain Democratic resources across the red-tinted Senate map.

"He has unlimited money, we know that he'll spend it, and as the campaign progresses you'll see how much his personal wealth has increased while he's been governor," Nelson told POLITICO after meeting privately with Facebook CEO Mark Zuckerberg on Capitol Hill.

Nelson suggested that Scott could single-handedly spend upward of $100 million on the race — an unlikely prospect for a governor who reported a personal net worth of $149 million last year, but a possibility because the governor's wife has millions more socked away. And Democrats acknowledge that the threat of Scott's finances alone will force them to shovel more of their own money into Florida.

"Now there's national money that has to get diverted to Florida. So if you're in another marginal or competitive state — a state like a Tennessee or an Arizona, which are eminently winnable for Democrats — there's just fewer dollars available for you to tap into nationwide," said Mo Elleithee, a former Democratic National Committee spokesman and current executive director of Georgetown University's Institute of Politics and Public Service.

"It's impossible, impossible, for a Florida race to be inexpensive," said Elleithee, who was Janet Reno's campaign manager in her 2002 race for Florida governor against Jeb Bush. "It's not that it's a zero-sum game. But for Democrats it would have been nice to have one less expensive state to have to dump money into so that money could go into other states."

That pull on resources from Senate Majority PAC and the Democratic Senatorial Campaign Committee could allow Republicans to get a monetary edge in cheaper states on the map like North Dakota, West Virginia and Indiana, though Democrats insist their candidates have enough of a cash advantage to stave off the GOP and its big-money backers. It also would make the few states where Democrats are on offense like Nevada and Arizona that much more challenging.

"Florida is a game-changing state," said Josh Holmes, a former chief of staff to Senate Majority Leader Mitch McConnell, predicting the Sunshine State would be "prohibitively expensive to protect" for Democrats.

"It could well make the difference in the majority," said Senate Majority Whip John Cornyn, a two-time National Republican Senatorial Committee chairman.

The problem isn't without precedent: Last cycle's clash between Florida GOP Sen. Marco Rubio and his Democratic challenger, then-Rep. Patrick Murphy, saw a whopping $89 million in spending despite Democratic groups largely abandoning Murphy down the stretch. Democrats slowly pulled their spending from the state, believing it made more sense to fund challengers in North Carolina, Missouri and Indiana than to bet their entire fortunes on Florida.

"It's a definite advantage for Republicans in other states even if Scott doesn't beat Nelson," said Terry Sullivan, a partner at Firehouse Strategies who was the general manager of Rubio's 2016

AMERICAN OVERSIGHT

presidential campaign. "It's a victory for Republicans outside of Florida as much as it a victory for Republicans in Florida."

But Democrats have something that money can't buy: the unpopularity of Trump, who has been a factor in bellwether state and federal races recently lost by Republicans from Florida to Alabama to Pennsylvania. Voters traditionally punish the party of the White House occupant, which was a factor in Scott's narrow wins in 2010 and 2014. In contrast to those races, when Scott frequently mentioned President Barack Obama, he said nothing about Trump in his Monday campaign launch. And Florida has seen an influx of thousands of Puerto Ricans after last year's hurricane and the Trump administration's bungled response could sway those voters who could tip the balance of the state away from Republicans.

Senators in Nelson's position have a good historical record running in midterms after a president from the other party carried their state. "Since '94, incumbents in this position are 21-3 — and the only losses came when the president's approval was significantly higher than Trump's is now," MSNBC correspondent Steve Kornacki tweeted.

Yet Nelson's fellow Democratic senators spent Monday riding to the rescue, even as his party insists he remains a favorite thanks to a strong name-brand in Florida.

Some of the party's most potent small-dollar online fundraisers — including Sens. Kamala Harris of California, Chris Murphy of Connecticut and Tim Kaine of Virginia — sent fundraising emails on Nelson's behalf Monday.

"If Senator Nelson loses, which is a real possibility, a powerful voice on the issues we all care about would be gone; replaced with somebody who will essentially rubber-stamp the Trump agenda," Harris wrote in her missive, which went out under the subject line "Trump begged him to run for U.S. Senate." "Furthermore, there is absolutely no chance Democrats can take the U.S. Senate back without winning this race."

The DSCC, Senate Majority PAC and American Bridge have all been focused on the contest, with the party unleashing a barrage of digital ads aimed at Scott as he entered the race. The Senate Majority PAC ad, backed by a six-figure buy, attacks Scott for refusing to expand Medicaid while giving tax cuts to the rich and says the governor "won't look out for you."

In most states across the Senate map, Democratic candidates have outperformed Republican opponents. Texas Rep. Beto O'Rourke raised an eye-popping $6.7 million for his race against Sen. Ted Cruz in the first quarter of 2018 — the biggest haul so far of any candidate running in the midterm elections. Missouri Sen. Claire McCaskill raised more than $3.9 million in the first three months of the year, while two other challengers, Reps. Jacky Rosen in Nevada and Kyrsten Sinema in Arizona, brought in over $2 million for their bids.

That "hard money" advantage Democrats are building could help their candidates air more TV ads in the fall, since super PACs and other outside groups often get charged higher rates for advertising.

AMERICAN OVERSIGHT

But there's only so much a Senate candidate can raise $5,400 at a time, while super PACs can accept donations of unlimited size (and Scott can make them himself). Strategists say that it could cost a campaign at least $3 million weekly for saturation statewide TV advertising across Florida's major media markets.

Scott shied away from saying he'd personally kick in as much money as he did in 2010 during his first race — about $73 million — and instead referenced his reelection campaign, when he spent about $13 million of his own money.

"I'm planning on winning. I'm going to run to win," Scott said when asked how much of his own money he would contribute. "I'm committed to raising the resources required just like I did in 2014. I'm going to aggressively travel the state and tell people why they need to support me. But we'll see."

Climate change skeptics run the Trump administration Back

By Emily Holden | 03/07/2018 05:07 AM EDT

President Donald Trump is filling the upper ranks of his administration with appointees who share his disbelief in the scientific evidence for climate change — giving them an opportunity to impose their views on policies ranging from disaster planning to national security to housing standards.

At the Interior Department, decisions about Pacific island territories threatened by rising seas are in the hands of an assistant secretary who has criticized "climate alarmists" for "once again predicting the end of the world as we know it." Agriculture Secretary Sonny Perdue's top advisers include a former talk radio host who has dismissed much climate research as "junk science." Trump's nominee to head research and technology at the Department of Transportation claimed three years ago that global warming had "stopped" — a position at sharp odds with the findings of federal agencies like NASA.

Trump has chosen at least 20 like-minded people to serve as agency leaders and advisers, according to a POLITICO review of his appointees' past statements on climate science. And they are already having an impact in abandoning former President Barack Obama's attempt to help unite the world against the threat of rising sea levels, worsening storms and spreading droughts.

Most famously, the president and his team have scrubbed mentions of climate change from government websites, kicked scientists off advisory boards, repudiated the Obama administration's greenhouse gas regulations and made the U.S. the only nation on Earth to reject the 2015 Paris agreement on global warming.

AMERICAN OVERSIGHT

More quietly, Trump's White House excluded rising temperatures from the list of threats in its December national security strategy, contradicting the approach of both the Obama and George W. Bush administrations. Last year, just before Hurricane Harvey drowned Houston, the White House rescinded requirements that projects built with federal dollars take into account the way warming temperatures might intensify extreme weather.

People worried about the consequences of climate change say a government that denies the problem is courting danger.

"The analogy could be if somebody's got a heart problem or high cholesterol, you take medicine that helps manage that so you can avoid a heart attack," said Ana Unruh Cohen, the government affairs director at the Natural Resources Defense Council. "Trump taking that away, saying, 'Forget it, I don't believe I have high cholesterol,' is setting up the country for a heart attack."

Aparna Mathur, a resident scholar in economic policy at the conservative American Enterprise Institute, found the trend worrying as well.

Many administration officials "don't seem to believe climate change is real, or if they believe climate change is real, there's this sort of attitude that there's not much to do about it or it's not caused by human actions," said Mathur, whose AEI colleagues also include people who question the extent of man-made climate change. As a result, she said, the U.S. is falling behind countries that are taking action on the problem.

The doubts are coming from both prominent and little-known Trump appointees, in ways both obscure and subtle.

Some have expressed doubt that the Earth is warming at all, speculated that the trend might be good for humans, or said it's just impossible to know how much of a role humans and their pollution are playing. All these statements fly in the face of findings by the government's own research agencies and the vast majority of climate scientists.

"There are scientists that think lots of different things about climate change," then-Rep. Mike Pompeo (R-Kan.), now Trump's CIA director, said on C-SPAN in 2013. "There's some who think we're warming, there's some who think we're cooling, there's some who think that the last 16 years have shown a pretty stable climate environment." Pompeo dodged the issue in his confirmation hearing last year, saying he would "prefer today not to get into the details of the climate debate and science."

When he was running for president, HUD Secretary Ben Carson scoffed at the idea that strong evidence for human-caused climate change even exists. "I know there are a lot of people who say 'overwhelming science,' but then when you ask them to show the overwhelming science they never can show it," he told the San Francisco Chronicle in 2015.

Few have been as publicly outspoken on the issue as Trump, who more than once has dismissed human-caused climate change as a "hoax" and claimed in January that polar ice isn't melting.

AMERICAN OVERSIGHT

The White House sought to strike a somewhat more moderate tone in a statement to POLITICO on Monday, which said that "the climate has changed and is always changing. The Administration supports rigorous scientific analysis and debate." The statement from principal deputy press secretary Raj Shah added that "the development of modern and efficient infrastructure ... will reduce emissions and enable us to address future risks, including climate related risks."

Some of the administration's climate skeptics have already come and gone.

Former HHS Secretary Tom Price, who had criticized the "allegedly 'settled science' of global warming" as a member of Congress, resigned in September amid criticism of his expensive travels on government and private planes. Kathleen Hartnett White, Trump's pick to head the White House Council on Environmental Quality, withdrew her nomination earlier this year after she stirred criticism with a long list of controversial statements , including calling the human role in climate change "very uncertain."

Another unsuccessful nominee, former talk radio host and political science professor Sam Clovis, had to pull out of the running to be USDA's chief scientist after critics noted that he has no science credentials — but he remains a top adviser to Perdue. Clovis dismissed much climate research as "junk science" in a 2014 interview, adding that "a lot of this global warming ... is really about income redistribution from rich nations that are industrialized to nations that are not."

Brent Fewell, a conservative environmental lawyer who was an EPA water official under Bush, suggested that some of these officials may privately acknowledge that man-made climate change is real. But he added: "A lot of people on the political right are uninformed about the issue. For whatever reason, it's a lot easier to simply agree with the prominent voices in the political party."

The upshot is the same, however: a 180-degree reversal from Obama's efforts to make the U.S. a leader in addressing the causes and consequences of a warming planet.

The EPA is leading the charge by withdrawing or weakening a host of climate regulations, including a 2015 rule that would have sped the electric power industry's shift away from coal-fired energy. Trump has also approved tariffs for solar panel imports, which will make it harder for green energy to compete with fossil fuels. Agencies have sought to cancel rules meant to limit the oil and gas industry's methane pollution — another major greenhouse gas source — and are reconsidering tougher standards for vehicles, too.

The Energy Department has proposed regulatory changes to prop up coal plants that can't compete in the market, while the White House is seeking buyers for U.S. coal and gas exports.

When Trump's critics seek to challenge these actions in court, the government's defense will be run by the Justice Department — an agency whose leader, Attorney General Jeff Sessions, said during a 2015 Senate hearing that carbon dioxide is "really not a pollutant."

"It's a plant food, and it doesn't harm anybody except that it might include temperature

AMERICAN OVERSIGHT

increases," Sessions said.

Some agencies are still continuing to study climate change and factor their findings into their policy decisions. But even there, career staffers may not talk about their work as openly as they once did, and the agencies seldom showcase it the way they did during the Obama years.

Much of the alarm among Trump's critics focuses on EPA, which has replaced dozens of scientists on its key advisory boards with industry or state representatives, and has found other ways to keep researchers from contradicting the administration's message. Last fall, the agency canceled an appearance by three EPA scientists scheduled to speak about climate change at a Narragansett Bay conference . Both EPA and the Energy Department have given extra scrutiny to grant proposals with the words "climate change," and in the case of EPA, it has put a political appointee in charge of signing off on them, The Washington Post has reported.

All this is in line with the public statements of EPA Administrator Scott Pruitt, who has suggested that global warming might be a good thing and has spoken about holding a public debate on whether climate change is real.

"Right out of the gate ... the administration took any and all mention of climate change off of the White House website," said Jacob Carter, a research scientist who has been tracking the administration's treatment of science for the Union of Concerned Scientists. "It seems like the administration is really trying to undo a lot of the scientific process as a whole and get experts out of the way."

The Environmental Data and Governance Initiative, which has studied the purging and rewording of climate-related documents on government websites, reported at the end of 2017 that it had found a "significant loss of public access to information about climate change."

The State Department's website took down links related to the Paris climate agreement, EPA removed a student's guide to climate change, and the Energy Department got rid of the words "clean energy" on a page with information for investors and businesses looking for projects with national laboratories.

The Interior Department's Bureau of Land Management, which oversees energy development on federal land, cut text about the effects of climate change. Some of the resources are still technically available in archives or in new locations, but they are harder to find because the government sites don't directly link to them, the Environmental Data and Governance Initiative says.

"It's not alarming the public because it's very hard to see each incremental thing," said Andrew Bergman, a co-author of the report.

Some Trump appointees have downplayed the idea that agency leaders' personal views about climate change are critical to making policy, suggesting they can still respond to global warming's effects without addressing why it's happening.

AMERICAN OVERSIGHT

"We continue to take seriously climate change — not the cause of it, but the things that we observe," Tom Bossert, the president's homeland security adviser, told reporters after last year's spree of catastrophic hurricanes that ravaged Houston, Puerto Rico and the Virgin Islands.

Sarah Hunt, who works in energy policy at the conservative American Legislative Exchange Council, said that "policymaker views on climate science needn't have any bearing on their support for conservative clean energy policies that spur the innovation we need to reduce emissions and promote environmental stewardship while we grow our economy."

But Trump's actions have reflected his views on the science. For example, one of his early executive orders in March 2017 eliminated a number of ways agencies had been required to consider climate change, including in environmental reviews for infrastructure projects.

Because so many of his appointees have questioned the conclusions of climate scientists, they are jettisoning climate change from routine processes. Those include EPA's refusal to consider the global monetary benefits of curbing rising temperatures when it rolled back Obama-era rules for the power sector.

Still, some agencies have continued to issue major reports that warn that climate change is a real and growing problem — even as the president's staffers push the message that the science is uncertain.

In November, the government's 13-agency National Climate Assessment concluded that humans have pushed global temperatures to their highest level in modern times. In January, NASA published data showing that last year was the second-warmest on record, and noted that temperature rises are "driven largely by increased carbon dioxide and other human-made emissions into the atmosphere."

Trump's nominee to run the space agency, Rep. Jim Bridenstine (R-Okla.), criticized "climate change alarmists" on the House floor in 2013 and claimed that "global temperatures stopped rising 10 years ago." (In fact, they haven't.) At his confirmation hearing last year, he acknowledged that humans are a cause of climate change but wouldn't call them the main cause.

"That is a question that I do not have an answer to," he said.

With help from Emily Holden, Eric Wolff and Alex Guillén

WELCOME TO CONGRESS, MR. PRUITT: EPA Administrator Scott Pruitt makes his long-awaited first appearance before a House Energy and Commerce subpanel this morning where he's expected to get grilled on a host of issues. The session will be broken into two segments — 10-11 a.m. and then 2 p.m. onwards — to allow Pruitt to attend a White House meeting on biofuels (more on that below). Look for E&C Environment Chairman John Shimkus to recognize the arrangement is "not ideal, but gives members maximum ability to personally question the administrator about the agency's mission" during his opening remarks.

What Republicans will say: Expect Chairman Greg Walden to press Pruitt on budget transparency and his plans to address staffing issues: "I expect that 'Back to Basics' is not an abdication of environmental protection, but rather a rededication to mastering the most fundamental aspects of EPA's mission," he'll say, according to prepared remarks glimpsed by ME. Shimkus said his questions could touch on a range of topics, including TSCA, brownfields, safe drinking water and the agency's staffing.

And Democrats? "We're all noticing the orientation toward the environment is completely different with respect to budgeting, with respect to climate change, potentially with respect to methane, particulates," Rep. Scott Peters, a subcommittee member, told ME. "So, I just think we want to get a sense of where he's going and how he'll measure success." The committee's top Democrat, Frank Pallone, wouldn't reveal what he intends to grill Pruitt about when ME caught up to him in the hall.

AMERICAN OVERSIGHT

Pro's Alex Guillén's expectations for Pruitt's first Capitol Hill appearance in six months: "Lawmakers have probably built up some serious questions in that time, so we could see questioning on practically any issue before EPA: the Clean Power Plan repeal effort; the Waters of the U.S. rewrite; Superfund work; proposed budget cuts; Pruitt's decision earlier this year not to ban chlorpyrifos; and his increased security and travel. Pruitt's prepared testimony offers a standard overview of his EPA philosophy."

Rally time: Environmental and public health advocates, including the Union of Concerned Scientists, Sierra Club, Business Forward and the Alliance of Nurses for Healthy Environments, will rally outside Rayburn at 9:20 a.m. to draw attention to Pruitt's lagging enforcement efforts, spending habits and overhauls of science advisory panels. Ahead of the session, the Environmental Defense Fund updated their "Pruitt Playbook" and the Union of Concerned Scientists offers some suggested questions to ask.

If you go: The hearing kicks off at 10 a.m. in Rayburn 2123.

WHY PRUITT'S LEAVING: Sen. Ted Cruz has secured a meeting today at 11:30 a.m. with President Donald Trump and several Cabinet members, including Pruitt, for what he told ME is likely to be a "free-ranging discussion" about biofuels and the recent fights over the Renewable Fuel Standard. His message? "We need to find a solution that is a win-win. That is a win for corn farmers across the Midwest but at the same time is a win for blue-collar union members who work in refineries and right now are being bankrupted by a regulatory system that isn't working," the Texas Republican said. Other Senate Republicans are expected to attend as well (perhaps the ones who signed this letter). Remember Cruz still has a hold on Bill Northey's USDA's farm and conservation mission nomination, so watch to see if that's lifted as the most immediate outcome of the session.

Oilies only: Sen. Chuck Grassley wasn't invited to the meeting, his spokesman said, but not to worry: Grassley has said that a White House RFS meeting would be "a waste of time." And if there's one thing energy world knows now, it's that if you don't have Gang Grain, you got nothing.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and no one was able to name the Father Millet Cross national monument (which has since been transferred by Congress to a state park) as our nation's smallest at just 0.0074 acres when designated. For today: Which state currently has the most national monuments at 18? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ARCTIC LEASE SALE FLOP: Despite touting the "largest ever" lease sale in the National Petroleum Reserve-Alaska, BLM received just bids on seven of the 900 tracts offered, Pro's Ben Lefebvre reports. Those bids, generating just $1.2 million in high bids, came jointly by ConocoPhillips and Anadarko for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per acre. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue. Leasing of state land did quite a bit better, according

AMERICAN OVERSIGHT

to the Anchorage Daily News.

For perspective: At the price of $14.99/acre, "leasing the entirety of the Arctic Refuge Coastal Plain's 1.5 million acres would raise slightly more than $11 million in revenue for the federal government, a far cry from the billion dollar lie that Trump and Republicans are feeding the American public," the Alaska Wilderness League's Kristen Miller said in a statement. Remember the Republican budget calls for Senate ENR to kick in $1 billion in revenue (which CBO said would come through ANWR drilling), though the lease results seem to bolster skepticism from environmental advocates and Democrats about those estimates.

Situational awareness: Energy Chairman Lisa Murkowski was named a tax conferee late Wednesday, along with Sens. Orrin Hatch, Mike Enzi, John Cornyn, John Thune, Rob Portman, Tim Scott and Pat Toomey . "With Congressman [Don Young] representing the House of Representatives on our energy provisions, Alaskans will have a very strong voice at the table to ensure this bill crosses the finish line," she said in a statement.

No (strategic petroleum) reservations: Count Shimkus, a tax conferee, among the backers of the Senate's approach of selling off 7 million barrels from the Strategic Petroleum Reserve as part of the final tax package H.R. 1 (115). "There was a reason to have the SPR," he told ME. "There is a credible reason to debate whether, for now and in the immediate future, there is a need." He also said he's a "big ANWR supporter" and that he doesn't see the Arctic drilling provision getting pulled from the final version.

INHOFE, PRUITT'S TOXIC LEGACY: POLITICO Magazine's Malcolm Burnley takes a deep dive into the contaminated Oklahoma region of Tar Creek, an area so poisonous that only 10 holdouts live there, and he finds a buyout program for residents that left Sen. Jim Inhofe awash in scandal and litigation. Then-Attorney General Scott Pruitt ultimately concluded an audit into possible criminal wrongdoing didn't warrant charges and he shielded his review from public release, only to have some in the state believe his efforts were designed to spare Inhofe embarrassment. Many residents in the polluted zone of Tar Creek continue to express shock that no one was prosecuted over what happened in their federal buyout program

Pruitt and Inhofe flatly denied there was any political motivation in shielding the audit. "It was important to protect the individuals' reputation that were in that investigation," Pruitt said in an interview. "You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys." One interesting fact though: Ryan Jackson, now Pruitt's chief of staff, was once Inhofe's point person on the Tar Creek issue. Photo gallery here.

Pruitt's new gig: Trump named the EPA administrator to chair the Gulf Coast Ecosystem Restoration Council, a group formed after the Deepwater Horizon oil spill restore the ecosystems and economies of the Gulf Coast, your ME host reports. Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council.

AMERICAN OVERSIGHT

MAY FERC NOW BE WHOLE: New FERC Chairman Kevin McIntyre will be sworn in today, bringing the five-member agency to full power, Pro's Eric Wolff reports. His swearing-in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes

MORE HEARINGS COMING ON CLEAN POWER PLAN: EPA announced Wednesday it would hold additional public hearings on its plan to repeal the Clean Power Plan in San Francisco; Gillette, Wyo.; and Kansas City, Mo., Pro's Emily Holden reports. Pruitt said the change was "due to the overwhelming response" and the agency will announce the dates and locations of the meetings in the coming weeks.

SPLIT OVER EXTENDERS? Ways and Means Chairman Kevin Brady told reporters Wednesday he doesn't like the idea of moving a package of extenders this year but hasn't made a final decision yet, Pro Tax's Brian Faler reports . "It's horrible policy and process," he said. But those comments come as Thune, the Senate's number three Republican, said lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs." Doing an extenders package as the chambers work to iron out differences between their broader tax bills is likely to test tax writers' bandwidth.

Shutdown watch: Congressional leaders head to the White House for a meeting with Trump on government funding today, but GOP lawmakers expect to pass a two-week spending package despite internal division within their party, POLITICO's Rachael Bade and Sarah Ferris report. House Freedom Caucus leaders have been asking for a commitment GOP leadership does not believe it can give them: a promise to "hold the line" and refuse Senate Democrats' demands for increased spending on non-defense programs.

House Democrats, including Minority Whip Steny Hoyer, hold a press conference at 10 a.m. in Cannon 234 to call on Republicans to take up additional federal assistance for Puerto Rico and the U.S. Virgin Islands. Watch here.

ICYMI: Both sides framed their arguments at a hearing of the U.S. Trade Representative over whether to impose tariffs on solar equipment imports in language aimed at swaying Trump, Pro's Eric Wolff reports.

PATAGONIA SUES OVER BEARS EARS: A coalition of groups, including Patagonia, became the latest to file a lawsuit challenging the Trump administration's downsizing of Bears Ears National Monument on Monday. Link to the lawsuit filed in Washington federal court here.

ENDANGERMENT FINDING PUSHBACK STALLS: Conservative state lawmakers and businesses that are members of the American Legislative Exchange Council on Wednesday shot down an effort to urge Pruitt to challenge a science-based endangerment finding that requires EPA action on greenhouse gas emissions. "In subcommittee, a substantive conversation occurred where arguments were made for and against the draft model policy," said Bill Meierling, executive vice president of external relations for the

AMERICAN OVERSIGHT

group. "After debate, it was clear that neither the public nor the private sector supported the draft as written."

Meierling added that "ALEC members prefer to advance policy only after a consensus opinion has been reached." Reports suggested later the resolution had been pulled in the aftermath of strong opposition, including from Exxon Mobil. Pruitt was expected to speak at the ALEC meeting on Friday but canceled due to a "scheduling conflict," Meierling said.

NO COMMENT: Murkowski forcefully urged Sen. Al Franken to step down amid sexual harassment allegations on Wednesday, but a spokeswoman declined to state whether Roy Moore would be welcome on her committee if he wins the Alabama special election next week. "We aren't commenting until after the special election and decisions about committee seats are made by conference," she said. Outgoing Alabama Sen. Luther Strange currently has a slot on the energy panel.

THERE'S ALWAYS A TIE: Congressional Democrats said Tuesday they have evidence then-national security adviser Michael Flynn sent assurances to former business partners that a U.S.-Russia energy partnership in the Middle East, which reportedly would have included more than two dozen nuclear plants in the region, was "good to go," POLITICO's Kyle Cheney reports. The revelations from a whistleblower came in a letter released Tuesday.

MAIL CALL! LET'S BOOST EFFICIENCY CAPS! A collection of energy efficiency organizations, led by the Alliance to Save Energy, sent a letter to congressional appropriators on Wednesday urging them to boost "budget cap allocations for federal energy efficiency programs." Failure to do so could result in steep cuts to EPA and DOE programs across the board, the groups warn. Link here.

TAKE A GLANCE! LESSONS FROM THE RFS: The American Enterprise Institute is out with a report looking at policymaking lessons from the RFS. It argues the biofuels mandate would be better as a rate standard than a volume standard, EPA should issue multiyear rather than annual rules and that uncertainty should be explicitly incorporated into future rulemakings, among other things.

BAD SOLAR ACTORS: Campaign for Accountability released the results of a years-long investigation concluding two companies — Vivint and SolarCity — received more complaints about their sales tactics than others in the solar industry. "Unfortunately, the deceptive sales tactics of solar companies, like Vivint and SolarCity, are making rooftop solar a risky bet," Daniel Stevens, the group's executive director, said in a statement. Read it here.

DREAMS TURNED REALITY? The Center for Western Priorities is out with a report finding the Trump administration has already granted 13 of the energy industry's 24 top priorities. Read it here.

SUGGESTIONS GIVEN: American Council for Capital Formation released a paper this

AMERICAN OVERSIGHT

morning with ten ideas for improving the regulatory process. It's the product of a November 2016 roundtable with Sens. Mike Rounds, Angus King, James Lankford and others. Link here.

MOVER, SHAKER: Michael Boucher has joined Crowell & Moring LLP environment and natural resources practice as a partner in Washington. He joins from Dentons US LLP, where he led that firm's chemical, pesticide, and consumer product regulation team.

Stories from POLITICO Pro

Biofuel backers claim victory in EPA battle Back

By Eric Wolff | 10/20/2017 05:37 PM EDT

Biofuels backers were breathing a sigh of relief on Friday after EPA Administrator Scott Pruitt backed away from changes to the Renewable Fuels Standard, a reversal that left oil refiners frustrated.

Pruitt acceded to demands from Sen. Joni Ernst that he publicly promise not to pursue plans to change the biofuel program rules — changes that had been sought by oil refiners who have long complained about the costs of implementing the program that many see as a giveaway to the corn states.

Pruitt's letter to Ernst, Sen. Chuck Grassley and five other Midwestern Republican senators delivered what they'd asked for: A promise not to expand the group of companies required to comply with the program, to keep the biodiesel volume requirements at levels proposed in July, to not alter the policy that strips RFS credits from exported ethanol, and to explore allowing year-round sale of gasoline with 15 percent ethanol nationwide.

The quick reversal by Pruitt — at the direction of President Donald Trump — showed the influence of the biofuel lobby, corn growers and farm-state lawmakers to scuttle changes in the decade-old policy sought by the energy industry.

"This was a basket of bad ideas for biofuels," said Brooke Coleman, head of the industry lobby group Advanced Biofuels Business Council. "And there's no way that we could have any other response than to take this approach. [Pruitt] didn't kick tires on changing the RFS, he tried to take a baseball bat to the program, and the response was matching and in response to, from a magnitude perspective, to the initial foul."

The push by the senators, as well as Midwestern governors, "made a huge difference in this matter," said Michael McAdams, head of the Advanced Biofuels Association. "In addition, the collective unity of the entire biofuels industry, including those who distribute and market these fuels, made a significant impression on the importance and support for the

AMERICAN OVERSIGHT

RFS program."

But oil refiners who have said the high cost of biofuel credits, called Renewable Identification Numbers, was costing them hundreds of millions of dollars, lamented the power of the biofuels lobby and the corn-belt lawmakers.

"The [Pruitt] letter is a result of political pressure applied by Midwestern politicians," said one refining source. "Some Midwesterners cannot accept any premise that the RFS could be improved. As a result, their overreaction included everything from holds on confirmations to even more personal threats launched at the White House and EPA."

The unified and vociferous campaign by the biofuels industry in attacking the proposal that would have lowered biodiesel volume mandates surprised some in the refining industry, as well as the political staff in the EPA, sources tell POLITICO.

The Trump administration's embrace of the oil industry had raised refiners' hopes that it could have the best opportunity in years for significant RFS changes, and refining giant Valero Energy, along with a group of Pennsylvania companies, believed they would get relief from what they considered an onerous program.

But Grassley took to the Senate floor to blast Pruitt's biofuel plans as a "betrayal" of Trump's promises to protect ethanol, and he arranged a call with Trump and Pruitt that led to the meeting in his office with Pruitt and Ernst as well as Deb Fischer (Neb.), John Thune (S.D.), Ben Sasse (Neb.), Pat Roberts (Kan.) and Mike Rounds (S.D.). Following that meeting, Ernst demanded the public statement from Pruitt, and said she would withhold her support for Bill Wehrum, who was nominated to run the agency's air office, forcing a delay in the Environment and Public Works Committee's vote until next week.

Ernst spokeswoman Brook Hougeson told POLITICO, "Now that Sen. Ernst has received the assurances that the EPA will support the spirit and the letter of the RFS, she will support Mr. Wehrum."

Valero was disappointed its efforts to change the program had been shot down by the fierce political opposition.

"These senators have intervened in a regulatory process, and the proposals and concepts in the letter address RFS implementation problems to which these senators have offered no constructive solutions," Valero said in a statement. "The only unifying principle of their bullying opposition seems to be a desire to maintain the status quo at all costs and to protect windfall profits associated with unregulated trading of renewable identification numbers, or RINs. Their position advances neither the goals nor the efficient implementation of the RFS, and places U.S. manufacturing jobs at risk."

But in a statement, the White House made clear that Trump remained fully behind the biofuels program.

AMERICAN OVERSIGHT

"President Donald J. Trump promised rural America that he would protect the Renewable Fuel Standard, and has never wavered from that promise," spokeswoman Kelly Love said in a statement. "The president has had constructive conversations with several key officials about the RFS over the past week, and he understands their concerns. The Trump administration will protect the RFS and ensure that our Nation's hardworking farmers continue to fuel America."

One energy executive said the biofuel backers were victorious because they were unified in their support for the RFS, while Republicans, the oil industry, and even the refiners were not on the same page.

"The ethanol boys won this round, no doubt, but at a pretty high cost," said Stephen Brown, vice president for federal government affairs for Andeavor. "The refining industry is anything but united on the RFS beyond a sunset as individual companies have each made investments and honed mitigation strategies to comply with the statute. As those investment decisions become increasingly operationally embedded, the industry will continue to splinter on the suite of RFS issues."

But some producers are still wary of Pruitt's pledge in his Thursday letter, and they note that he promised to release a final rule in which none of the mandatory volumes will be less than he proposed in July. For some producers, those volumes were already too low.

"There's some work to do here," Coleman said. "We won't know until the rule is done. And we recognize it's an ongoing rulemaking, it's not like they're going or republish the rule, they've said what they can say. The final rule really matters."

'Largest ever' Interior Alaska oil lease sale draws little interest Back

By Ben Lefebvre | 12/06/2017 08:26 PM EDT

The Interior Department received only seven bids from two companies today in what it had billed as the "largest ever" oil and gas lease sale in the National Petroleum Reserve in Alaska.

The bids on the 10.3 million unleased acres in the NPR-A generated just $1.2 million in high bids, according to a Bureau of Land Management summary. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue.

A BLM Alaska lease sale last year generated $18 million for 1.4 million acres offered.

AMERICAN OVERSIGHT

Subsidiaries of ConocoPhillips and Anadarko were the only two companies that participated in the lease sale. The companies only bid for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per acre.

Low oil prices and the relatively cheap and plentiful land available for hydraulic fracturing in the lower 48 has hurt oil company interest in the out-of-the-way fields of Alaska and the Gulf of Mexico. Interior Secretary Ryan Zinke and Sen. Lisa Murkowski (R-Alaska) have pushed to open more public land to drilling, however, saying that doing so is important to increase domestic energy production.

Zinke had previously said that today's "large and unprecedented sale in Alaska will help achieve our goal of American Energy Dominance."

An Interior spokesperson did not immediately respond to questions.

WHAT'S NEXT: Republicans hope to keep ANWR drilling provisions in their budget proposal.

Democrats worry Arctic National Wildlife Refuge being lost amid tax debate Back

By Ben Lefebvre | 11/29/2017 05:17 AM EDT

Democrats' fight to keep oil and gas rigs out of the Arctic National Wildlife Refuge is losing ground as the Republican tax plan advances — and it's almost as if no one has noticed.

The prospect of drilling in the untouched Alaskan tundra is as close to reality as it's been in more than a decade, with none of the political drama that in past decades turned the refuge's fate into a top-tier rallying cry for liberals. Legislation to allow drilling in ANWR is quietly hitching a ride on the tax code overhaul that Senate Republicans hope to complete by the end of the week, overshadowed by larger debates on whether the bill is a giveaway to rich people and corporations at the expense of the poor and working class.

"It's really not gotten the attention that it should," Sen. Tammy Duckworth (D-Ill.), a member of the Energy and Natural Resources Committee, told POLITICO about the ANWR provision. "It's not just the budget discussion. It's about everything else that's going on, the flurry of all sorts of other news."

Angus King (I-Maine) said Republicans were trying to shield ANWR from opposition by adding it to the larger bill rather than bringing it to the floor separately under rules, which would require it to win support from 60 senators to overcome a filibuster.

AMERICAN OVERSIGHT

"Well, clearly the strategy is to try to get it through as part of this tax reform effort and thereby avoid a direct up-or-down vote," King said in an interview earlier this month.

The nonstop news cycle and preponderance of other concerns with the tax bill are making it difficult to focus on an issue that normally fires up Democratic voters.

"I do think that putting ANWR in the budget reconciliation package hasn't drawn as much extremist opposition because it is completely overshadowed by tax reform, which is the center of the package," said Chris Guith, senior vice president of the U.S. Chamber of Commerce's Global Energy Institute. "But there are some who aren't exactly supportive of tax reform that support ANWR, and it's possible to see ANWR bring a vote or two to help pass tax reform."

Senate Energy Chair Lisa Murkowski (R-Alaska) easily advanced legislation through her committee directing the Interior Department to hold two lease sales for drilling in ANWR over the next decade. It would raise $1 billion over that period, according to the Congressional Budget Office, making it eligible for inclusion in a budget reconciliation package that Democrats cannot filibuster.

The reconciliation package also will include Republicans' tax plan and a repeal of the Obamacare individual mandate. While Murkowski helped scuttle the Obamacare repeal push earlier this year, she says she supports ending the mandate. Murkowski's office did not respond to a request for comment.

ANWR, a swath of tundra on the northern Alaska coast, is home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years. Congress designated the 19 million-acre area a wildlife refuge in 1980, but it set aside a 1.5-million-acre parcel known as "10-02" for possible drilling if future lawmakers approved such a plan. The U.S. Geological Survey estimated in 1998 that part of ANWR could hold up to 12 billion barrels of oil, and President Donald Trump and Alaska Republicans have called it essential for their plans for American "energy dominance."

Sen. Susan Collins (R-Maine), who is undecided on the tax bill for a several reasons, said she will support an amendment on the Senate floor to eliminate the ANWR language, but she said success there is not a prerequisite for her to vote for the underlying bill. "No it is not, but I would certainly try to get it out of the package," Collins told reporters Tuesday. Collins was the only Republican to cross the aisle on an unsuccessful amendment to keep pro-drilling language out of the underlying budget resolution, meaning it is unlikely that she would be able to strip the ANWR provision from a reconciliation bill.

But Democrats say that passing a deficit-increasing tax bill in order to open ANWR would actually harm energy-producing states. That's because the $1.5 trillion shortfall from the GOP tax cuts would trigger required "pay-as-you-go" cuts to mandatory spending programs, according to a CBO analysis sent to House Minority Whip Steny Hoyer (D-Md.).

AMERICAN OVERSIGHT

One of the programs on the pay-go chopping block would be the energy royalty revenue sharing program carried out through the Mineral Leasing Act. Cutting those payments would lose Alaska an estimated $15 million in energy royalty payments next year alone, an amount important to a state already facing budget shortfalls.

"Communities throughout the West would be impacted by the loss of revenue, which is used to support a variety of needs including infrastructure, school funding, conservation, and recreation," Hoyer said in a statement to POLITICO. "This is yet another example of the consequences associated with forcing through legislation to add $1.5 trillion to the deficit in order to give tax cuts to the wealthy."

Pay-go cuts also would hit popular programs like Medicare and student loans, but Congress can waive the law with 60 votes in the Senate. Democrats are not yet on board with that approach.

The current push to open ANWR, coming amid a swarm of competing headlines and buried in larger legislation, has come nearer to succeeding than the GOP's two previous attempts. President Bill Clinton vetoed a budget package in 1995 that included language opening ANWR, while a Democratic filibuster thwarted a second attempt in 2005.

Environmental groups have targeted public engagement at only a handful of congressional districts. The League of Conservation Voters spent $550,000 on television ads in three Republican congressional districts. The LCV also paid for a bipartisan polling firm to probe public opinion on opening ANWR, but even that focused only on registered voters in eight congressional districts.

"The reason they're trying to sneak it into the tax package is they know they don't have the votes otherwise," said Tiernan Sittenfeld, the league's senior vice president of government affairs. "They know they can't pass it under regular order, that's why they're doing a sneak attack."

Even ANWR supporters are staying out of the spotlight.

"I haven't seen any full-out, front-page ads, nothing like that," Alaska Oil and Gas Association President Kara Moriarty said. "We're a little battle-weary, to be honest. Alaskans support opening up ANWR. There's been a few statements reiterating that."

Nick Juliano contributed to this report.

The Environmental Scandal in Scott Pruitt's Backyard Back

AMERICAN OVERSIGHT

By Malcolm Burnley | 12/06/2017 05:57 PM EDT

PICHER, Okla. — Tar Creek, Oklahoma, is breathtaking in a terrible way: At one time the world's deepest source of lead and zinc, the three-town region is now a cratered landscape so poisonous that no one, aside from 10 holdouts, can live there. Mountains of ashlike "chat," a toxic residue from lead-zinc milling, rise majestically among the remains of homes torn from their foundations. Abandoned pets forage around the ruins. A child's teddy bear lies sprawled in a ghostly living room. A gorilla statue fronts an empty high school, atop a sign proclaiming "1A Football State Champs, 1984."

Tar Creek is also part of the environmental legacy of one of the state's—and nation's—leading politicians, Senator Jim Inhofe, and his longtime ally, Scott Pruitt, the former Oklahoma attorney general who is now head of President Donald Trump's Environmental Protection Agency. After the EPA struggled to clean up the area, in 2006, Inhofe endorsed a plan in which a trust overseen by local citizens would use federal dollars to purchase homes and businesses in the toxic region so residents could move elsewhere. Then, when the plan proved so problematic that it spawned more than a half-dozen civil lawsuits and an audit into possible criminal wrongdoing, Pruitt, as the state's attorney general, invoked an exception to state freedom-of-information laws to keep the audit from being an open public record.

Now, that decision is coming into new light as many Oklahomans clamor for the audit to be released, suggesting that its revelations will prove embarrassing to Inhofe, who played a key role in designing the buyout plan, and cast doubt on Pruitt's decision not to move forward with charges. Last week, a Washington, D.C., nonprofit called the Campaign for Accountability raised the stakes even further, filing suit in Oklahoma courts to force the release of the audit.

"If you take a look at Scott Pruitt's record, you see a general disregard for transparency," said Daniel Stevens, the group's executive director. "I don't think it's outside our bounds to say that Pruitt is trying to hide evidence of criminal wrongdoing."

Pruitt, in an interview, dismissed the idea that he was covering anything up, saying his former office's grand jury unit reviewed the audit and determined that no charges were warranted. He said he declined to make it public because he didn't want innocent people to be besmirched, even though the auditor rejected that reasoning and maintained it should be a public document. "It was important to protect the individuals' reputation that were in that investigation," Pruitt said.

Nonetheless, the mess at Tar Creek continues to follow Pruitt in other ways. As EPA administrator, he has assumed full responsibility for the still-faltering cleanup. And eyebrows were raised in Oklahoma this past January when, as Pruitt was awaiting confirmation for his EPA post, a White House spokesperson told Bloomberg News that the handling of Tar Creek was emblematic of Pruitt's philosophy: "national standards, neighborhood solutions."

AMERICAN OVERSIGHT

Pruitt, in an interview, said he knew nothing about the Bloomberg article, saying only that he endorses the EPA's current work at Tar Creek and the principle of combining federal resources and state and local leadership, rather than the buyout that occurred before his time as EPA administrator, while he was Oklahoma's attorney general.

"I think as far as a model going forward outside of the buyout, what we're trying to do is have a renewed focus on what I think are some of the most beneficial things we can do for citizens across the country, and that's to address some of these legacy sites that have substantial environmental challenges that allow them to once again enjoy the communities in their backyard," he said.

But many residents of the Tar Creek area, who gave up their homes in a buyout they considered both coercive and corrupt, continue to blame Pruitt for the fact that no one was prosecuted. They described a program so rife with good-old-boy corruption that certain individuals received outsize payoffs while some homeowners got so little they couldn't relocate anywhere nearby; meanwhile, they said, the people hired to demolish the homes received inflated contracts through a flawed process.

"We were lied to and deceived from Day One," said Gloria Workman, who said her son has learning disabilities from growing up in the polluted zone of Tar Creek, which had lead-poisoning levels in children that were three times higher than those registered in Flint, Michigan, during the peak of its recent water crisis. "Not only were we losing our homes, we were raped in the process."

"It was a nightmare," said Mary Thompson, who was still awaiting a resolution from the trust when an EF4 tornado ripped through Tar Creek in 2008, throwing bodies and trailers through the sky, killing six people and destroying more than 100 homes. Without homes, many people took lower-than-expected buyout offers—however insufficient they were perceived to be—because they had nothing left, she said.

"They preyed on us after the tornado," said Thompson, whose home was leveled.

Nonetheless, Inhofe, in a 2015 news release touting the completion of the buyout, cast it as a success because it did not lead to an expanded federal role.

"This is an example of a government program created for a specific purpose and then dissolves after the job is completed," Inhofe proclaimed.

Now, he continues to defend it but sounds less celebratory. "The first thing to know about the Superfund site at Tar Creek is that it's what's called a 'mega-site' and that it is an exceptional circumstance in every way. You can't compare it to any other Superfund site in the country," Inhofe said in a statement to POLITICO. "The voluntary relocation assistance to get people out of harm's way was right for the situation at Tar Creek, but may not be for every other Superfund—that is why state and local partnership is critical."

To many former residents, who still want the investigative report by the state auditor to see

AMERICAN OVERSIGHT

the light of day, even these modest and conditional endorsements feel like slaps in the face.

"People hate the government out here, and it's because of things like this," said Aletha Redden, a lifelong resident of the area who has a Donald Trump bumper sticker on her pickup truck. "I want Scott Pruitt to know: This is not the model."

***

A flat expanse of dusty roads and scrubby vegetation situated in the heart of Tornado Alley, the Tar Creek area was once the mainstay of the Quapaw Tribe, which was forcibly relocated there by the U.S. government in 1834. At the time, the territory had little economic value, but a half-century later, prospectors discovered enormously rich ore. By the turn of the 20th century, companies broke ground with drill rigs on Quapaw land.

Many of those firms made fortunes, luring white settlers into an uneasy state of coexistence with the Quapaw. Tar Creek proved to be the deepest reservoir of lead-zinc ore in the world, producing a whopping $1 billion in minerals between 1908 and 1950, according to the Oklahoma Historical Society. Picher, the largest of the mining towns, swelled to a population of 14,000.

Almost every aspect of life in Tar Creek traced back to the mines. The high school took on the mascot of a gorilla, a reference to workers in the mines who broke up boulders with hammers. Children played in sandboxes filled with chat, the chalky mining debris. Teenagers earned the nickname "chat rats" for climbing up the pillowy piles of toxic rubble throughout town and rolling tires down their slopes.

By the end of World War II, however, the boom was over. Most of the mining companies decamped for richer pastures. For the families left behind—including that of Yankees slugger Mickey Mantle, who grew up in the Tar Creek area in the 1940s—it was a slowly unfolding disaster. The extent of Tar Creek's collapse was reflected in the words of John F. Kennedy, who barnstormed into Joplin, Missouri—25 miles away from Tar Creek—in the closing days of the 1960 presidential campaign.

"My own judgment is I know no tougher occupation in the world that [sic] to be a miner, lead, zinc, coal. I am always glad to meet them because I think they live with peril," Kennedy declared. "They have as tough a life as there is. Every other one whose hand you shake has a finger off, a foot crushed, the chances of in 20 years their having a bad accident are more than any of the rest of us. And yet in this community and in West Virginia and Idaho and in other sections of the United States, there has been no group that has been harder hit, no group that has been more forgotten."

Indeed, after the last prospector looking for ore packed up and left in the mid-1970s, people looked to casinos and farming to make a living. But the residue from decades of mining was poisoning them. In 1979, acid mine water leached into the ground, threatening the area's aquifers, killing fish and turning creeks a rusty orange color. When the federal Superfund program—designed to clean up the nation's most polluted and contaminated land—kicked

AMERICAN OVERSIGHT

off in the early 1980s, Tar Creek was named to the inaugural National Priorities List. It's still on the list.

The EPA has spent more than $176 million over the past 25 years on cleanup work inside the 42-square-mile-area, on projects from plugging mine shafts to removing contaminated surface soil in people's yards. Though the amount of money sounds large, it hasn't been nearly enough to remove the toxic dangers, and many residents insist the cleanup was mishandled from the get-go. In some cases, the removal of soil resulted in sloping yards, which, during bouts of rain, caused flooding and mold inside houses. In 2000, the FBI raided the offices of the EPA's prime contractor at Tar Creek, Morrison-Knudsen. The company later settled a lawsuit brought by the federal government alleging false representation of billing and progress reports for a sum of $1 million. In the settlement, the company made no admission of wrongdoing.

Meanwhile, the environmental hazards began to multiply: Shortly after the start of that Superfund spending spree, in 1993, researchers at the University of Oklahoma found that 34 percent of Quapaw children were living with lead concentrations above the federal limit. Further studies found alarming rates of lead and arsenic in both the tribal and non-tribal populations. In 1997, a university-lead study estimated that 21 percent of children near Tar Creek had elevated blood-lead levels (defined as 10 micrograms per liter at the time), which is three times higher than the highest measurements found in Flint, Michigan, in 2015. The learning disabilities and memory loss that had plagued the schools and curtailed lifespans for decades suddenly had a culprit.

As the dangers became ever-more visible and the cleanup lagged, residents rallied around the idea that the government should quickly buy them out of their homes, rather than wait for the hazardous materials to be removed. They thought they might have an ally in the state's senior senator, Inhofe, a Republican who was chair of the Senate Environment and Public Works Committee. But Inhofe, who has a skepticism about environmental science that exceeds that of any of his colleagues, refused to consider the idea. "There will never be a buyout. I promise you that," Inhofe told the *Tulsa World* in late 2003.

Inhofe's refusal to take action of any sort was often criticized in local press, due in part to the relentless attacks of a young Democratic congressman named Brad Carson. "If you'd asked people in Oklahoma politics at the time, they'd say we were mortal enemies," said Carson, referring to himself and Inhofe. "I was elected [to Congress] in 2000, and my goal was to untie the Gordian knot. The area is desperately poor. If it was in suburban Tulsa or Oklahoma City, there would've been outrage."

In 2004, Governor Brad Henry signed a bill authorizing the use of state dollars for the relocation of roughly 100 families with children under the age of 6. Under pressure to take further action, the senior senator began to come around. At first, he secured $2 million in federal funding to pay for a study that discovered that 286 homes within Tar Creek were at risk of being swallowed up from cave-ins of underground mine shafts. This provided an opportunity for Inhofe to reverse himself on the buyout, supporting it on the grounds of protecting residents from cave-ins.

AMERICAN OVERSIGHT

"The stability with the underground mine workings was worse than anyone had previously been thought," recalls Ed Keheley, a retired nuclear engineer and native of Picher who co-authored the study's final report. In the spring of 2006, Inhofe announced a joint federal and state buyout program that would begin with $20 million in funding, with the express purpose of relocating any and all people who'd voluntarily leave Tar Creek.

Having once opposed the buyout to his political detriment, Inhofe now used his clout to keep on funding it, but with the idea that decision-making would be concentrated among local leaders, not the federal government. With Inhofe's support, the Oklahoma legislature created a nine-member panel called the Lead Impacted Communities Relocation Assistance Trust to assume control over the project. The members were all volunteers, helping their community, but some had a vested interest in the buyout: They included, for example, a local banker whose institution would later give loans to people to help them relocate; local property owners whose own homes—and those of relatives—would be subject to the buyout; town officials; and a leader of the Quapaw Tribe.

Inhofe cast himself in the role of the community's protector, putting out a 2008 campaign ad that declared: "Tar Creek: poisoned earth, the threat of schools and churches sinking into abandoned mines. Everyone thought it would be too much to tackle, except for one stubborn man named Inhofe."

But over a five-year period, the buyout would become the subject of a host of civil lawsuits and the subject of a state investigation.

***

The local members of the trust—few, if any, of them schooled in environmental management—had two major tasks: figuring out how much each property owner should be paid for their home or business, and then choosing a company to demolish the properties. Both tasks would become the subject of complaints about cronyism, with residents saying the trust members rewarded their friends and politically connected individuals.

It didn't help that the trust often met behind closed doors, and that the vice chairman of the trust resigned within a year. The trust's sole employee, operations manager Sonya Harris, also quit, declaring in her resignation letter that she could no longer continue "with a clear conscience without recommending a change; I will not place myself in a position to be perceived as approving of the operations to this point."

The first case to raise eyebrows involved the mayor of Picher, Ernest "Sam" Freeman. In 2005, when the buyout was first being discussed as a probability, he acquired three large parcels of former mining land covered with chat from the Picher Development Authority, which he chaired. Freeman bought them at 3 cents per square foot, for a total price of $2,088.50, according to the findings of a state audit at the time. It was, the audit declared, a violation of state laws forbidding members of public boards from entering into contracts with those boards. Ottawa County District Attorney Eddie Wyant called on Freeman to

AMERICAN OVERSIGHT

return the properties to the development authority in lieu of charges.

"If Sam wanted to buy that land, he needed to get off the board and purchase it legally," Wyant told a local newspaper at the time. "I am not one to put anyone in jail over this, but he needs to clear it up." Wyant, when reached by phone, declined to comment further.

Freeman returned the land, but, in a move that enraged some neighbors, profited off it anyway. The trust had decided that, because so much former mining land had been taken over by state authorities and tribal members, those who owned mobile homes or other shelters on land they didn't own would be eligible for buyouts. Freeman made a claim based on the fact that he had been maintaining and renting out homes on the chat-infested property for years before he tried to buy it.

Trust documents show that Freeman received at least $274,000 from the buyout, more than half of which came from the same lots he had been ordered to return by law enforcement. (Freeman told POLITICO a payout of more than a quarter-million sounded accurate enough, though he declined to provide an exact figure.) Neighbors suspected cronyism. Freeman, who is no longer mayor, denied receiving any preferential treatment. "These people thought I bought the lots to make a killing in the buyout," he said. "I don't think I got more than anyone else would have."

The size of the mayor's profit diminished public confidence in the trust, just as it was engaged in the most delicate part of its task, figuring out how much to pay each individual property owner. Property owners were supposed to receive fair market prices as if pollution hadn't existed in Tar Creek, based on the sales of similar properties elsewhere in northeast Oklahoma. But those calculations appeared to lack uniformity.

The average payout for the 695 properties involved in the buyout was just over $65,000, but the disparity in prices between two properties could be dramatic. Residents complained about lowball offers on some decent properties and overly high payouts for others that were rundown or minuscule in size.

"I got $3,000 for my gun shop. It took me $16,000 to build it," said former Tar Creek resident John Frazier.

Wally Long said he and his wife got $35,000 for their Dairy Queen, while another Dairy Queen right up the road got substantially more.

"We were told [by the trust] that's all the money there is," Long said. "It bothered my wife a lot. She put 23 years of her life into this business."

Meanwhile, a trust member named Janell Trimble got $185,000 for her house, and her brother collected $115,000 for his fiberboard house.

"I may be a member of the [relocation trust's committee], but I honor my duties and I recuse myself when family members are involved," Trimble told the *Tulsa World* in 2008. "[B]ut

AMERICAN OVERSIGHT

as a buyout participant I also expect to be treated just like the next person."

Nonetheless, both Trimble and her brother received more than 35 percent above the average price per square foot. On the other end of the spectrum, an elderly woman named Betty Betts received an offer of $12,000 for her home; when she protested, the appraised value was raised to $20,000. Many people got so little for their homes that they had to turn around and take out loans in order to resettle elsewhere in Oklahoma. In the end, the trust finished up with millions in unspent funds.

Residents concentrated their anger on the company that the trust hired to conduct the appraisals, Cinnabar, which had previously made headlines for its management of a noise-insulation program at the Tulsa Airport, which involved multiple lawsuits . In response, the trust engaged an "appraisal reviewer" to go back over Cinnabar's work. But the reviewer, a company named Van Tuyl Associates, quickly came under criticism as well. "They [often] didn't get out of their car. They never entered these homes," said Keheley, who was a member of the trust at the time. (Van Tuyl Associates is now defunct; its former president could not be reached for comment.)

When the unrest over the buyout made the local newspapers, the trust's leadership pointed to a 95 percent acceptance rate for buyout offers. But some residents accused trustees of pressuring them with "take it or leave it" offers, according to a class-action lawsuit brought against the trustees, Cinnabar and Van Tuyl by more than 250 residents affected by the buyout. Plaintiffs also complained that they were denied the right to view the appraisal paperwork. There was even a fake camera—and posters notifying residents they were being videotaped—in the room where buyout offers were made, an apparent attempt to compel residents to take the offers, according to documents in the suit.

The suit, filed in Oklahoma district court, accused the defendants of cheating average property owners and rewarding friends and associates of the trustees. Depositions revealed an explanation for some of the inconsistencies in appraisals: For certain properties, Cinnabar expanded the boundaries of where it could find "comparables"—properties in adjacent counties whose sale prices were used to calculate the appraisals—with the approval of a state employee named J.D. Strong, who, according to the lawsuit, played a significant role in overseeing the trust.

One of the properties appraised in this fashion was that of Trimble, whose $185,000 payout, according to appraisal documents, had infuriated other residents.

When, in 2008, residents outlined their frustrations in a scathing six-page letter to Inhofe, Henry and other elected officials, Strong dictated the governor's reply, which was co-signed by Inhofe, lawyers for the plaintiffs asserted in his deposition. "I may have drafted this," Strong responded, when presented with a copy of the letter saved on Strong's computer.

In an interview, Strong defended the trust and its system of appraisals: "We knew going in that we weren't going to be the most popular. We went in with the idea that we were going to be fair. I can honestly say that, looking back, we were fair and unbiased and frugal."

AMERICAN OVERSIGHT

During the six years the lawsuit was making its way through the state court system, both Cinnabar and Van Tuyl Associates declared bankruptcy. Eventually, the plaintiffs and the trust settled the case in 2015 for $1.3 million, which, after deducting attorney fees, meant that each resident ended up receiving an additional $2,600.

But that didn't satisfy many property owners.

"The people of Tar Creek were treated like second-class citizens, based on where they were born and lived," concluded Wally Kennedy, a columnist at the *Joplin Globe* who reported on northeast Oklahoma, including Tar Creek, for more than 30 years. "For someone to portray the buyout of the people of Tar Creek as a successful program is lying through their teeth."

***

Once the trust obtained the properties on the toxic land, the next problem was how to destroy the empty structures that were on them.

Inhofe made sure there was enough money for the job. Even as he joined fellow Republicans in condemning President Barack Obama's 2009 stimulus bill as an unwarranted giveaway, the senior senator helped secure an additional $15.7 million in the bill to help the trust finish its work.

The trust hired a local businessman named Jack Dalrymple to oversee bids for the demolition contract. He was best known for organizing an annual deer hunt for paralyzed veterans, an endeavor that earned him a lifetime achievement award from a local Chamber of Commerce. His payment was to be 10 percent of the value of the winning bid. He formulated a scoring system to evaluate bids and, in March 2010, the trust awarded the contract to Stone's Backhoe, the most expensive of all four bids. At $2.1 million, it was nearly four times the cost of the lowest bidder.

Just 14 days after Stone's was declared the winner, it asked that the contract be reassigned to two subcontractors, CWF Enterprises, a carpet-cleaning business, and Vision Construction and Management. Former residents contend that there were longstanding ties between Dalrymple and the subcontractors. Whether or not they were friends before, they soon became hunting buddies. In October 2012, local coverage of Dalrymple's annual event for paralyzed veterans pictured the heads of the two firms setting up the flag for the hunt.

One of the losing contractors filed suit against the trust and individual trustees in Oklahoma district court, accusing them of violating the state's open-meeting act and competitive bidding act. The district county judge sided with the plaintiff, reopening the bidding process.

But rather than blame Dalrymple, the trust gave him a new contract. It included a flat rate for his services, $305,472—about $100,000 more than he would have received had the

AMERICAN OVERSIGHT

contract remained with Stone's.

In January 2011, a $1.7 million demolition contract was awarded to none other than CWF Enterprises, the carpet-cleaning business, which was also the least expensive of the three bids received. A month later, however, the estimated cost of the contract ballooned to $3,050,786—almost exactly 10 times what Dalrymple received in his new contract.

While many residents cried foul, Andy Lester, the trust's attorney, attributed the increase to the fact that the EPA-controlled repository for dumping debris had just closed down. Trekking the remains of the houses and businesses to a dumping ground further away caused the massive change order, and a near doubling of the contract.

Lester also defends the choice of Dalrymple to handle the bids, contending that he was an engineer with some prior experience with public contracts and that the trust members couldn't handle the process on their own.

"It is important to remember that the trust board consisted of nine members—including, for example, a physician, a school teacher, and a mushroom farmer. They were volunteers, not professionals at this kind of work," Lester said. "Jack Dalrymple is a professional engineer with significant experience. And candidly, there are very few professional engineers in northeast Oklahoma."

Nonetheless, lawyers out of the Tulsa region filed a lawsuit in 2012 under the False Claims Act that accused the trust members, Dalrymple and the heads of the companies hired to do demolition work of being part of a "good old boy network" and defrauding federal taxpayers.

Attorneys for the plaintiffs, Zach and Brad Barron, say the lawsuit fizzled when the Department of Justice took the stance that "the government didn't sustain damages" from the charges laid out in the complaint. In a false claims lawsuit, where the plaintiffs are effectively trying to recoup money that's owed to the government, a lack of willingness from the government is effectively a death knell, the Barrons said. The lawsuit was eventually dismissed.

In an interview, Dalrymple insisted the allegations of cronyism were entirely unfounded.

"There were a lot of emotions and feelings during that period," he said. "When you ask someone to leave their home, it's a tough thing. But ... there was nothing there."

***

Still, the drumbeat of complaints continued, eventually reaching the ear of Jerry Morris, the state director for Oklahoma's then-junior senator, Republican Tom Coburn.

It was no secret that Coburn, a physician who cast himself as a political outsider, didn't look upon Inhofe with any sort of fond feelings of mentorship.

AMERICAN OVERSIGHT

"I think they were often seen as having very different approaches to politics," said David Blatt of the Oklahoma Policy Institute. "Inhofe is seen as a classic, pork-barrel politician who'd bring federal dollars to Oklahoma, the more the merrier." Whereas Coburn, Blatt says, "hated that kind of politics and did as little of it as he possibly could. In fact, he spoke disdainfully and caustically about it the whole time he was in the Senate."

Coburn was not shy about stepping on his fellow Republican's toes. Morris forwarded a memo with a lengthy list of allegations related to the awarding of contracts in the Tar Creek buyout, especially regarding the demolition work, to then-Attorney General Pruitt. In April 2011, Pruitt asked the state auditor and inspector, Gary Jones, to look into the memoranda sent from Coburn's office.

"I have determined that these concerns are serious in nature such that an investigation of the matter is warranted," Pruitt wrote to Jones. A 17-point list of allegations for Jones to investigate followed, including whether there was collusion between Dalrymple and the contractors hired to do the demolition work.

After spending almost two years on the investigation, Jones turned over the results of the audit to the attorney general's office in January 2014, apparently believing it had uncovered important information.

For a year and a half, the attorney general sat on the findings. Then, in May 2015, Pruitt announced that he wouldn't press charges. In addition, he vowed to keep the audit secret by refusing to release it.

Jones fired back at the attorney general's office days later, penning a letter to Pruitt that described his rationale for withholding the audit as "baffling."

"To our knowledge, the individuals named in the report are members of a public trust or contractor whose services were retained as part of this substantive project," Jones wrote. Further, he contended, "our office has received no inquiries from you or your staff regarding the content of the audit report."

Pruitt justified the secrecy by comparing the investigation results to the findings of a grand jury. "Specifically, our office is concerned about publication of unsubstantiated criminal allegations against private citizens," Pruitt wrote in a 2015 statement.

In an interview with POLITICO, Pruitt appeared to go one step further, suggesting the audit had in fact been vetted by a grand jury.

"You're addressing issues that it's been some months since I've looked into," Pruitt said. "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and, as such, it was important to protect the individuals' reputation that were in that investigation."

AMERICAN OVERSIGHT

But when asked to clarify, a Pruitt staff member indicated that he was using the term "grand jury" as shorthand for the Multi-County Grand Jury Unit, a division of the AG's office, headed at the time by a Pruitt appointee, which decides whether to take cases to a grand jury for indictment.

It's not the same as a grand jury finding. Nonetheless, the attorney general's office, now overseen by Mike Hunter, Pruitt's former top deputy, has denied all open records requests for the audit, declaring it to be "under the supervision of the Multi-County Grand Jury Unit." A spokeswoman for the Oklahoma attorney general's office said that if there was in fact a grand jury, the office couldn't confirm or deny that.

These rationales befuddle open records experts.

"I don't think there's anything in the law that would prohibit it [the investigation] from being released," said Joey Senat of Oklahoma State University, the president of FOIA Oklahoma. "The law doesn't require that the audit be kept secret. What would its release be harming? They've closed the investigation and decided not to prosecute."

Jones, who is now running for governor, reiterated his call for the attorney general's office to release the audit, saying in a statement that "regarding any investigation of this kind, we always err on the side of transparency and the people of Oklahoma have a right to know."

Concluded Senat: "When you have the state auditor [Gary Jones] saying these are not unsubstantiated claims and this is a serious problem, good government would call for letting the public know what happened and showing the public the audit. Transparency helps alleviate a lot of concerns about favoritism, corruption, and incompetency—if those are indeed unfounded."

***

Tar Creek today looks like an abandoned landfill. Illegal dumping has added a fresh layer of grime to the already ruined patch of earth. Giant craters from collapsed mine shafts, some as large as 200 feet in diameter, are filled with Bud Light cans, shotgun shells and the tangled remains of kids' playground equipment. "We call this urban renewal, Picher style," quipped former resident Gloria Workman.

Abandoned houses that were not part of the buyout are now coated with graffiti. The charred remains of the former mining museum in Picher, which burned down at the hands of arsonists, stands as a teetering monument to Tar Creek's former way of life. And the sense of danger and destruction extends beyond the former buyout area: On rainy days, local fields used for football practice bleed a toxic shade of orange.

The EPA is continuing its now 33-year-old cleanup effort, and it's thrust the Quapaws back into stewardship of the land. Although the tribe leased away or sold off significant chunks of Tar Creek to mining companies throughout the 20th century, the Quapaws have at least temporarily regained control of all of it. Since 2012, the tribe—a sovereign nation with

AMERICAN OVERSIGHT

roughly 5,500 members—has been the primary EPA contractor for environmental remediation at Tar Creek. It's the first time any tribe has been a prime contractor on a Superfund site, assigning all the contracts and overseeing all the work.

"It's a great story," said Craig Kreman, assistant environmental director of the Quapaw tribe. "We're employing tribal members a lot of the time and members of the community. So that income [from the EPA contract] stays here in this community and is being spent in this community. We're not hiring a contractor out of Georgia."

Every day, a steady stream of trucks haul away more than 2,000 tons of soil saturated with cadmium, lead and other metals at the site. Each patch of earth requires years of passive soil treatments before it tests clean enough to plant row crops like winter wheat. Half-acre by half-acre, the hope is that Tar Creek can be put into productive agricultural use decades from now.

In August, after touring the abandoned area and surrounding towns, Pruitt's senior adviser Albert "Kell" Kelly, praised the EPA's efforts surrounding Tar Creek in sweeping terms: "People from all across the country count on the Superfund program to address pollution and revitalize their communities. Tar Creek cleanup is an excellent example of how the program should work. State and local partners, tribal partners, and EPA—all working together year after year to address historical pollution at this mega-site. It's cooperative federalism working at its best."

But many local observers, including Ed Keheley, aren't nearly as positive.

"Usually, the EPA comes in, they do their dirty work, sprinkle some wheat seed, take a picture to show Congress, and next year it looks like this," he said, pointing to a barren pasture. "Clearly, the EPA hasn't had the best interests of the people at heart. So I get personally offended when people like Scott Pruitt suggest otherwise."

For his part, Pruitt announced a fresh grant of $5 million to the Quapaw-led project last May, and he is quick to distance this experiment in local control from the one that preceded it.

"We [the EPA] can't impact the buyout. We didn't authorize the buyout. I didn't manage the buyout and its unique situation," Pruitt said. "I think what's most tangible is what we can do together with the tribe to advance and continue remediation."

When asked to respond to the undying complaints of residents in rural Ottawa County, where Tar Creek is located—a county in which Trump received 71 percent of the vote in November 2016—Pruitt changed the subject. "I had no experience with Tar Creek, to be honest with you," he said.

That's true, except it was his office's decision, when he was attorney general, not to prosecute the people accused of mishandling the trust money, Keheley and other local residents point out.

AMERICAN OVERSIGHT

But what galls them more than the failure to prosecute is the failure to release the results of a government investigation—an audit that they believe will raise questions about Pruitt's unwillingness to press charges and cast a negative light on a project near and dear to Inhofe's heart.

Pruitt's connections to Inhofe are extensive. One of Pruitt's first hires as EPA chief was Ryan Jackson, a longtime Inhofe staffer and the senator's point person on Tar Creek, who is now Pruitt's chief of staff. He also brought on four other former aides to Inhofe, the Senate's leading proponent of the idea that man-made pollution contributing to climate change is a conspiracy and a hoax. Three of them are Pruitt's senior advisers on air, climate and legal issues.

"It gives me a level of comfort to know that we have a bureaucracy that's actually going to be serving instead of ruling," Inhofe told the *Washington Post*, applauding Pruitt for hiring his staff.

Numerous veteran Oklahoma political watchers, some of whom spoke to POLITICO on condition of anonymity, suggest that there may be an ulterior motive in Pruitt's embrace of Inhofe: It's widely believed that Pruitt, who is 49, wants to run for Inhofe's seat when the senator retires. Many observers think Inhofe is unlikely to seek reelection in 2020, when he'll be 85. And some have noted that Pruitt's decision not to advance the case against the buyout trust spared Inhofe the embarrassment of seeing the program he personally tailored and promoted go down in scandal.

"Pruitt is a rising Republican political star previously in Oklahoma and now nationally," said one journalist who closely follows the Oklahoma political scene. "There have been rumblings that Pruitt might have his eye on higher office. ... Pruitt would do everything to keep Inhofe close, assuming he wants to run for that seat."

Wally Kennedy, the *Joplin Globe* columnist who has covered the Tar Creek trust more closely than any other journalist, said, "My sense of the way that unfolded was that Pruitt decided he was not going to do any kind of prosecution, and then Inhofe writes a letter saying what an outstanding job the trust did. My reaction was 'Huh?'"

"The fact that the audit was not publicly disclosed tells me that somebody is hiding something," he added. "This is Oklahoma taxpayers' money being committed to ratting out what appears to be some apparent corruption. But everybody looks the other way. That's why I'm talking to you. Because if you can shed a light on this, maybe somebody will say 'We need to take a second look at this.'"

Pruitt, however, insists his decisions were strictly based on the law, and an Inhofe staffer flatly dismissed the possibility of Inhofe influencing Pruitt's decision.

"Senator Inhofe would have had no involvement in the case or in any of then-Attorney General Pruitt's decisions," the staffer said.

AMERICAN OVERSIGHT

Pruitt was similarly bemused by the idea that there would have been any sort of political calculation behind his decision to shield the audit. The only politics in this case, he suggested, was on the part of those who want to embarrass him and Inhofe.

"You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys," Pruitt said in frustration.

Others argue that transparency in this case is not a political issue as much as a legal right.

"The open records act seems pretty clear this audit should be released," said Stevens, executive director of Campaign for Accountability. "You have to ask why he's not releasing it? Pruitt should have to be held accountable for this."

Pruitt named chair of Gulf Coast Ecosystem Restoration Council Back

By Anthony Adragna | 12/06/2017 07:28 PM EDT

President Donald Trump announced today that EPA Administrator Scott Pruitt would chair the Gulf Coast Ecosystem Restoration Council.

The group, formed in 2012 after the Deepwater Horizon oil spill, helps restore the ecosystems and economies of the Gulf Coast. Pruitt was unanimously selected by Alabama, Florida, Louisiana, Mississippi and Texas, the five states on the council.

"I am honored to be selected by the states and look forward to working with the governors to continue the excellent work of this Council to further the critical mission of restoring the Gulf of Mexico ecosystem," he said in a statement.

Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council. He takes over the chairmanship from the Secretary of Agriculture.

WHAT'S NEXT: Pruitt begins his chairmanship of the group.

Powelson says McIntyre to be sworn in Thursday Back

AMERICAN OVERSIGHT

By Eric Wolff | 12/06/2017 03:33 PM EDT

New FERC Chairman Kevin McIntyre will be sworn in on Thursday, FERC Commissioner Rob Powelson told an audience of electric power officials in Philadelphia today.

"At a general session this afternoon in Philadelphia, one of the key speakers was FERC Commissioner Rob Powelson, and during his speech this afternoon he confirmed that Kevin McIntyre will be sworn in tomorrow," PJM Interconnection spokeswoman Susan Buehler said.

President Donald Trump nominated McIntyre, a partner at the law firm of Jones Day, to be commissioner and designated him to be chair months ago. The Senate confirmed him in early November, and he received his signed commission just before Thanksgiving.

His swearing in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes. Chatterjee will miss that deadline by a day.

It also puts McIntyre in charge of the process initiated by Energy Secretary Rick Perry that is aimed at supporting coal-fired and nuclear power plants in an effort to protect the power grid's resilience. Action on that proposal is expected by Monday.

EPA to hold more hearings on Clean Power Plan withdrawal Back

By Emily Holden | 12/06/2017 03:28 PM EDT

EPA will hold three additional public hearings on a proposal to withdraw the Clean Power Plan, in San Francisco; Gillette, Wyo.; and Kansas City, Mo., the agency announced today.

EPA Administrator Scott Pruitt in a press release said the change was "due to the overwhelming response" to two days of hearings in West Virginia last week. Many environmental advocates criticized EPA for initially scheduling hearings only in coal country.

The agency will announce the dates and locations of the meetings in the coming weeks, and speakers must register.

The Obama administration, by comparison, held public hearings on the proposed climate standards in 2015 in Pittsburgh, Denver, Atlanta and Washington, D.C.

WHAT'S NEXT: Comments on the draft withdrawal are due Jan. 16.

Republicans divided over taking up tax extenders this year Back

By Brian Faler | 12/06/2017 05:40 PM EDT

Republican leaders are divided over whether to take up a second tax-cut bill this year.

Senate Republicans want to move legislation reviving a rump group of tax "extenders," separate from their more sweeping plan to rewrite the code.

But the House's top tax writer isn't so sure.

"I don't like the extenders," said House Ways and Means Chairman Kevin Brady (R-Texas). "It's horrible policy and process."

"No decision yet," he added, saying lawmakers need to talk it over.

His comments came after Sen. John Thune, the chamber's No. 3 Republican, said today lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs," including a tax credit to maintain short-line railroads.

Thirty-four temporary tax provisions expired at the end of last year, including 16 energy ones, and lawmakers are now facing demands to revive them. Some want to attach the provisions to funding legislation needed to keep the government open H.J. Res. 123 (115).

Many Republicans had sworn off the "extender" ritual after a 2015 tax agreement made many of the breaks permanent while giving others what lawmakers said was one final extension — which, for some, ended last year.

Putting together an extender bill, even as lawmakers negotiate a final compromise on their tax-overhaul plans, is likely to test tax writers' bandwidth.

Solar pitches target Trump at USTR hearing Back

By Eric Wolff | 12/06/2017 03:46 PM EDT

AMERICAN OVERSIGHT

Supporters of tough trade tariffs on solar energy equipment and their opponents squared off again at a hearing of the U.S. Trade Representative today. with both sides coloring their arguments in language aimed at swaying the White House.

The two companies seeking tariffs on foreign shipments of solar panels and cells, Suniva and SolarWorld Americas, pressed the case that barriers were vital for protecting U.S. manufacturing of the clean energy technology because of its importance for national security — issues at the heart of President Donald Trump's "America First" agenda.

"A strong remedy is required to persevere the U.S. industry, provide breathing space for this American-invented manufacturing technology," said Matt Card, vice president of operations for bankrupt Suniva. "Anything less would ... result in the loss of this industry. That would have a dramatic negative impact on national security."

Witnesses at the hearing opposed to instituting tariffs raised the same issues, but contended that trade barriers would threaten other businesses, and that the benefits of tariffs would help only a narrow segment of the solar industry.

"Factories in South Carolina and across the nation would suffer from solar tariffs," South Carolina Gov. Henry McMaster told the panel. "While there is only one operating factory in the U.S. petitioning for these tariffs, there are over 50 American-owned factories employing thousands of people that would be the ones harmed, including a steel mill in South Carolina that provides American-made steel for many of the U.S. factories that produce metal equipment for the utility scale solar farms."

The panel, which included representatives from the departments of Energy, Treasury, State, Labor and Commerce, and from the Council of Economic Advisers, appeared unmoved by the national security arguments, and instead peppered parties with detailed questions about the potential tariffs' impacts on U.S. solar power demand. Panel members also questioned whether a few years of trade protections would be enough time for Suniva and SolarWorld to hike their production enough to catch up to overseas competition.

They pressed witnesses from both side on how tariffs would effect the domestic solar market, whether a modest tariff would be effective, and their opinions on the recommendations the U.S. International Trade Commission sent the White House last month. ITC members recommended a range of options, from sliding scale of tariffs to a cap on total shipments.

The Trade Representative will send the White House a recommendation, and Trump has until Jan. 26 to make a decision.

Driving the Day

THE STATE DEPARTMENT has issued a "worldwide caution" for U.S. citizens traveling the world. **MATT LEE,** the AP's longtime diplomatic correspondent **(@APDiploWriter),** says: "The last time the @StateDept issued a 'Worldwide Caution' because of a US policy decision was March 2003 at the start of the Iraq war." ***The State Department memo*** http://bit.ly/2B0IFkY

AP/GAZA CITY, at 4:18 a.m.: "GAZA CITY, Gaza Strip (AP) - Hamas leader calls for new uprising against Israel in wake of US decision to recognize Jerusalem as Israel's capital."

-- ADELSON'S PAPER -- ISRAEL HAYOM FRONT PAGE: In English: "Thank you, Mr. President! Jerusalem" (the "usa" in Jerusalem is colored with the American flag). In Hebrew: "The capital of Israel" http://bit.ly/2jYPwAZ

WSJ EDITORIAL -- "The Reality of Jerusalem": "Arab leaders denounced the Embassy move, but we wonder how long the fury will last. The Sunni Arabs also confront the threats of Islamic terrorism and Iranian imperialism, and the Palestinians are a third order concern. If the movement of an American Embassy that was signaled more than 20 years ago is enough to scuttle peace talks, then maybe the basis for peace doesn't yet exist." http://on.wsj.com/2AZOrU3

Good Thursday morning. EXPECTED TODAY: House Republican leaders tell us they feel confident they will pass a bill to fund government for two weeks. Sen. Al Franken (D-Minn.) is widely expected to resign. And Congressional leaders head to the White House for fiscal talks.

AMERICAN OVERSIGHT

TRUTH BOMB: THE NEXT MONTH IS GOING TO BE A MESS -- It looks like Congress is going to avoid a government shutdown this week. But this is only the beginning of a very, very messy month for Republican leaders. Top GOP lawmakers, at the moment, are not completely certain how they'll fund the government when funding expires on Dec. 22. One idea bouncing around is for the House to send the Senate a bill it won't even be able to take up -- a yearlong bill that increases military spending but doesn't bump domestic spending. Conservatives are itching for House Republican leaders to stand firm when the Senate rejects its opening funding salvo later this month.

-- ALSO TOUGH: Republicans and Democrats are almost certain to cut a deal to boost spending, renew CHIP -- the massive children's health program and bolster Obamacare. Some of that could come at the end of the month, or next month, on the back of an omnibus spending package, which will lump together 12 spending bills. The mood isn't good at the moment, and it only seems to be getting worse. Optimists hope tax reform makes all Republicans happy. Color us a tad skeptical.

AROUND THE TAX REFORM HORN ...

-- HOUSE/SENATE DIFFERENCES: "Tax Bill Is Likely to Undo Health Insurance Mandate, Republicans Say," by NYT's Robert Pear and Tom Kaplan: "House and Senate negotiators thrashing out differences over a major tax bill are likely to eliminate the insurance coverage mandate at the heart of the Affordable Care Act, lawmakers say.

"But a deal struck by Senate Republican leaders and Senator Susan Collins of Maine to mitigate the effect of the repeal has been all but rejected by House Republicans, potentially jeopardizing Ms. Collins's final yes vote. 'I don't think the American people voted for bailing out big insurance,' said Representative Dave Brat, Republican of Virginia, who opposes a separate measure to lower insurance premiums that Ms. Collins thought she had secured." http://nyti.ms/2AZIhU0

-- THE FIGHT OVER 20 PERCENT: "Corporate rate cut in tax bill could change as GOP hunts for votes," by Seung Min Kim, Nancy Cook and Bernie Becker: "In a closed-door meeting Wednesday with CEOs from the Business Roundtable, Republican Sen. Pat Toomey and White House economic adviser Gary Cohn in separate sessions told the crowd their strong preference was to keep the corporate rate at 20 percent, where it is now in the legislation, even as lawmakers were under intense pressure to find new revenue, according to three people familiar with the meeting.

"Both men left the crowd with the impression that the corporate rate was a target in the hunt for that revenue and could rise as a result. ... Each percentage point the corporate rate increases is worth about $100 billion over a decade. The top corporate rate is now 35 percent. ...

"Boosting the corporate tax rate could open a floodgate of other demands from lawmakers seeking to get provisions in the tax bill. Sen. Marco Rubio (R-Fla.), for

AMERICAN OVERSIGHT

instance, told POLITICO on Wednesday that if the rate goes up to 22 percent 'and they don't use some portion of it to help' boost the child tax credit, 'I'm going to have a big problem.'" http://politi.co/2nARInh

-- K STREET INC.: "Lawmakers face pressure to save deductions for mortgage interest and state and local taxes," by Theo Meyer, Aaron Lorenzo and Colin Wilhelm: "Lobbyists have launched an all-out effort to save tax breaks and protect powerful industries as the Republicans' tax overhaul lurches toward President Donald Trump's desk. Builders and real estate interests are pushing to save the mortgage interest deduction. Businesses are fighting to strip out a last-minute provision inserted into the Senate bill that would preserve the corporate alternative minimum tax. And a coalition of trade groups and local government leaders is urging Republicans not to cut the state and local tax deduction.

"With Trump pressing Congress to send him a bill before Christmas, lobbyists must decide where they want to focus their efforts over the next week. Some are working the senators and representatives who will make up the conference committee charged with ironing out the differences between the House and Senate bill. Others are working to persuade Republican leaders or leaning on the members of Congress whose constituents may see their taxes go up if changes aren't made to the bill." http://politi.co/2nCatqu

FIRST IN PLAYBOOK -- TAX AIR WARS IN NEW YORK - 45Committee, a group backed by the Adelson and Ricketts families, is launching ads against House GOP members who opposed both the tax bill and Obamacare repeal. The first ad -- on which the group says it's spending six figures -- criticizes Rep. Dan Donovan (R-N.Y.) for saying he is opposed to Obamacare and supports a tax overhaul, but voting against them. It's part of 45Committee's $10 million effort on tax reform, a representative of the group said. The ad's narrator ends the spot by saying "If he won't keep his word and support tax reform, how can we ever trust him again?" ***The ad*** http://bit.ly/2Ah695L

-- SCOOP: AMERICAN ACTION NETWORK is putting $2 million on TV, explaining what they believe the tax bill would do for 24 districts across the country. ***The ad*** http://bit.ly/2joVCeo

WSJ'S KRISTINA PETERSON and **KATE DAVIDSON: "House Republicans Weigh Linking Debt Ceiling Increase to Spending Bill":** "Rep. Doug Collins of Georgia, a member of House GOP leadership and the head of a working group of House Republicans on the debt limit, said lawmakers were considering increasing the debt ceiling as part of the bill funding the government for the rest of the fiscal year, known as an omnibus.

"GOP leaders are likely to seek to raise the debt limit enough to last at least through next November's midterm elections, lawmakers and aides said. They will have to act, likely by March, to avoid a default.

AMERICAN OVERSIGHT

"'There's just going to be an omnibus at some point, probably after the first of the year,' Mr. Collins said in an interview this week. 'Probably there'll be some debt ceiling discussions with the White House [going] into that bigger omnibus bill,' he said, but noted that the group of 23 House Republicans hadn't reached a final decision." http://on.wsj.com/2nBwOoh

IF YOU READ ONE THING - POLITICO MAGAZINE INVESTIGATION: "The Environmental Scandal in Scott Pruitt's Backyard: It's one of the dirtiest places in America. Former residents of Tar Creek, Oklahoma, want to know why Trump's EPA chief didn't prosecute allegations of wrongdoing during a federal buyout program," by Malcolm Burnley in Picher, Oklahoma: "Tar Creek, Oklahoma, is breathtaking in a terrible way: At one time the world's deepest source of lead and zinc, the three-town region is now a cratered landscape so poisonous that no one, aside from 10 holdouts, can live there. Mountains of ashlike 'chat,' a toxic residue from lead-zinc milling, rise majestically among the remains of homes torn from their foundations. Abandoned pets forage around the ruins. A child's teddy bear lies sprawled in a ghostly living room. A gorilla statue fronts an empty high school, atop a sign proclaiming '1A Football State Champs, 1984.'

"Tar Creek is also part of the environmental legacy of one of the state's-and nation's-leading politicians, Senator Jim Inhofe, and his longtime ally, Scott Pruitt, the former Oklahoma attorney general who is now head of President Donald Trump's [EPA]. After the EPA struggled to clean up the area, in 2006, Inhofe endorsed a plan in which a trust overseen by local citizens would use federal dollars to purchase homes and businesses in the toxic region so residents could move elsewhere. Then, when the plan proved so problematic that it spawned more than a half-dozen civil lawsuits and an audit into possible criminal wrongdoing, Pruitt, as the state's attorney general, invoked an exception to state freedom-of-information laws to keep the audit from being an open public record.

"Now, that decision is coming into new light as many Oklahomans clamor for the audit to be released, suggesting that its revelations will prove embarrassing to Inhofe, who played a key role in designing the buyout plan, and cast doubt on Pruitt's decision not to move forward with charges." http://politi.co/2kuwKFw

ATTN. DETROIT -- "John Conyers III was arrested for domestic abuse but not prosecuted," by NBC News' Andrew Blankstein in LA: "John Conyers III, a Detroit hedge fund manager named as a possible successor to his scandal-rocked father, Rep. John Conyers, was arrested in Los Angeles this year on suspicion of domestic violence, but prosecutors declined to charge him, according to documents obtained by NBC

AMERICAN OVERSIGHT

News. ... Conyers III, 27, was arrested on Feb. 15 at a Los Angeles residence on suspicion of violence against his girlfriend after the alleged victim called police. ... The girlfriend said that Conyers III suspected her of cheating after he went through her computer. She told police that he 'body slammed her on the bed and then on the floor where he pinned her down and spit on her,' the report says." http://nbcnews.to/2zUliWp

FOR YOUR RADAR -- "N. Korea says war is inevitable as allies continue war games," by AP's Kim Tong-Hyung in Seoul, South Korea: "North Korea says a nuclear war on the Korean Peninsula has become a matter of when, not if, as it continued to lash out at a massive joint military exercise between the United States and South Korea involving hundreds of advanced warplanes. In comments attributed to an unnamed Foreign Ministry spokesman, North Korea also claimed high-ranked U.S. officials, including CIA Director Mike Pompeo, have further confirmed American intent for war with a series of 'bellicose remarks.'" http://bit.ly/2iznFXY

JARED WATCH -- "Kushner bets he can have it both ways on Jerusalem move," by Annie Karni: "Jared Kushner is betting the house on a risky strategy that Middle East experts worry will derail any future Israeli-Palestinian peace deal - as well as what remains of the powerful son-in-law's shrinking West Wing portfolio. He privately encouraged President Donald Trump's announcement Wednesday that 'Jerusalem is Israel's capital,' which was seen by some experts in the region as a setback for peace efforts led by Kushner and his small team.

"The group has made dozens of trips to the region and spent hours on listening tours, working to gain the trust of the Palestinians and the broader Arab world. 'It is very, very hard to imagine how that peace effort can be continued,' said Ghaith al-Omari, who served as an adviser to the Palestinian Authority's negotiating team from 1999 to 2002. 'All the Arab leaders who have been cultivating relations with the new administration will be forced to come out very strongly against this.' But a person close to Kushner said he was forceful in his backing of the move. 'Encouraging would be an understatement,' the person said. 'It was him.'" http://politi.co/2k3bEdr

THE BACK STORY -- "Inside the demise of Al Franken," by Elana Schor and Seung Min Kim: "Al Franken weathered six women's sexual misconduct allegations without hearing a single resignation call from his fellow Democratic senators. No. 7 broke the dam. The Democratic women of the Senate had been talking among themselves about the Franken allegations for weeks, one Democratic aide said. None, however, went further than to call for a Senate Ethics Committee probe of the Minnesota senator, who many of them had considered a close friend.

"That stance became increasingly untenable as the accusations against Franken piled up. In calls and texts, the female senators eventually came to an unstated agreement, according to another aide familiar with their discussions: The next credible story of misconduct in a credible news outlet would would prompt them to call for Franken's resignation. When POLITICO reported Wednesday that a former Democratic congressional aide said Franken tried to forcibly kiss her in 2006, the aide said, it 'was

AMERICAN OVERSIGHT

the tipping point.'

"The first public resignation nudge came from Sen. Kirsten Gillibrand (D-N.Y.), a champion for reform of Capitol Hill's sexual harassment policy who one day earlier publicly declined to push Franken. Six more Senate Democratic women followed, with head-snapping speed. 'I think many people have been talking about this for some time. And we all responded with what we had been feeling today,' Sen. Patty Murray (D-Wash.) said after she said Franken should step aside. 'It wasn't coordinated, it just happened.'" http://politi.co/2iXZ2bb

THE REPLACEMENT -- "Female lieutenant governor expected to replace Franken if he resigns," by Maggie Severns: "Minnesota Gov. Mark Dayton is expected to appoint his lieutenant governor and close ally, Tina Smith, to Al Franken's seat if the Democratic senator resigns on Thursday, three people familiar with the Democratic governor's thinking said. But that appointment would be just the start of a huge upheaval in Minnesota.

"Part of the reason Smith could be heading to the Senate, the sources said, is because she has indicated no interest in running for Congress in the past and would not run for the remainder of Franken's term, which expires in 2020, in a 2018 special election. That would clear the way for a wide-open Democratic primary next year if Franken steps down." http://politi.co/2BQf7UM

FIRST PERSON - TINA DUPUY in The Atlantic, "I Believe Franken's Accusers Because He Groped Me, Too: The Democratic Party needs to stand with women who have been harassed-and not defend the politicians who abused them." http://theatln.tc/2iZhZu9

RUSSIA WATCH -- "Trump Jr. cites attorney-client privilege in not answering panel's questions about discussions with his father," by Kyle Cheney: "Donald Trump Jr. on Wednesday cited attorney-client privilege to avoid telling lawmakers about a conversation he had with his father, President Donald Trump, after news broke this summer that the younger Trump - and top campaign brass - had met with Russia-connected individuals in Trump Tower during the 2016 campaign.

"Though neither Trump Jr. nor the president is an attorney, Trump Jr. told the House Intelligence Committee that there was a lawyer in the room during the discussion, according to the committee's top Democrat, Rep. Adam Schiff of California. Schiff said he didn't think it was a legitimate invocation of attorney-client privilege. 'I don't believe you can shield communications between individuals merely by having an attorney present,' he said, after the committee's lengthy interview with Trump Jr. 'That's not the purpose of attorney-client privilege.'" http://politi.co/2kusF43

TRUMP'S THURSDAY -- The president is meeting with Republican senators and RNC Chair Ronna Romney McDaniel. He is also signing a proclamation for National Pearl Harbor Remembrance Day. In the afternoon he will meet with congressional leaders

AMERICAN OVERSIGHT

and former Ambassador to the United Nations John Bolton. He and the First Lady will also host a Hanukkah reception.

THE JUICE...

-- **FIRST IN PLAYBOOK - TOM LOBIANCO,** an AP White House reporter, has signed a deal to write a book on Vice President Mike Pence. LoBianco has covered the former governor of Indiana for multiple news organizations, including the AP and the Indianapolis Star, since 2011. The book was sold by Bridget Matzie of Aevitas Creative Management to Julia Cheiffetz of Dey Street Books, an imprint of HarperCollins.

-- **JUSTIN MYERS** has been hired as the CEO of For Our Future and For Our Future Action Fund. For Our Future was founded in 2016, when it ran a $60 million ground operation to help progressive candidates. He most recently has been SVP at the Pivot Group and is an alum of DCCC, Kay Hagan and the New Jersey Democratic State Committee, where he was ED.

-- **THE WING,** a New York-based women's co-working and social club, held a "welcome" dinner at 1789 last night. It is opening its D.C. outpost in Georgetown early next year. **SPOTTED:** Sens. Amy Klobuchar (D-Minn.), Heidi Heitkamp (D-N.D.) and Kirsten Gillibrand (D-N.Y.), Audrey Gelman, Giovanna Lockhart, Dayna Grayson, Alyssa Mastromonaco, Edith Gregson, Juleanna Glover, Kasie Hunt, Kristen Welker, Annie Karni, Pia Carusone, Susan Tynan, Tammy Haddad and Katie Glueck.

HMM - "VA cuts program for homeless vets after touting Trump's commitment," by Arthur Allen and Lorraine Woellert: "Four days after Veterans Affairs Secretary David Shulkin held a big Washington event to tout the Trump administration's promise to house all homeless vets, the agency did an about-face, telling advocates it was pulling resources from a major housing program. The VA said it was essentially ending a special $460 million program that has dramatically reduced homelessness among chronically sick and vulnerable veterans.

"Instead, the money would go to local VA hospitals that can use it as they like, as long as they show evidence of dealing with homelessness. Anger exploded on a Dec. 1 call that was arranged by Shulkin's Advisory Committee on Homeless Veterans to explain the move. Advocates for veterans, state officials and even officials from HUD, which co-sponsors the program, attacked the decision, according to five people who were on the call." http://politi.co/2nCuQ6L

VALLEY TALK -- "Silicon Valley Investor Shervin Pishevar Accused Of Spreading False Information To Cover Up Alleged Sexual Misconduct," by BuzzFeed's Ryan Mac: "Venture capitalist Shervin Pishevar, who has been accused by multiple unnamed women of sexual misconduct in a recent news report, is now being accused by a Republican-affiliated opposition research firm of spreading false information about it in an attempt to cover up his alleged wrongdoings. In a bizarre twist on Wednesday, Definers Public Affairs - which Pishevar is suing for allegedly helping to spread a false police report that accuses him of rape - filed a motion to dismiss the investor's suit in full.

"That motion, made in San Francisco Superior Court, argues that Pishevar's lawsuit should be thrown out under California's anti-Strategic Lawsuit Against Public Participation (anti-SLAPP) law, which was designed to prevent litigation that is simply meant to silence or intimidate critics by burying them under legal costs." http://bzfd.it/2BH5RI2

DESSERT -- "A history of the final dying days of the power suit," by WaPo's Robin Givhan: "Douglas Heye wears suits. Like a lot of men, he gives a fair amount of consideration to the way those suits are styled. Unlike a lot of men, he is willing and able to break down those considerations into specifics. 'I like a pocket square, but I generally don't wear one with a tie,' says Heye, a former Republican strategist, now a CNN contributor. 'If I'm wearing a tie, three out of four times it's blue. I like blue and I've been told it works for me. ... If I'm wearing a jacket and no tie, I always like a pocket square. I think it's a little bit more dressy. It shows a little bit of effort.'

"Effort is important. The whole reason for wearing the suit, he says, is to set a tone. He recently attended a meeting where he knew everyone else would be casual. But he couldn't bring himself to show up in khakis and a golf shirt. A suit, he reasoned, signaled a certain seriousness. 'But I don't know,' he says. 'Maybe it means something to me and not the viewer.'" http://wapo.st/2Akck9h

MEDIAWATCH -- "ABC reprimands producer for giving data to Trump campaign," by Michael Calderone: "In their new book 'Let Trump Be Trump,' campaign insiders Corey Lewandowski and David Bossie wrote that Chris Vlasto -- then-executive producer of 'Good Morning America' and now senior executive producer for investigative reporting -- called Bossie, Trump's deputy campaign manager, at 5:01 p.m. on election night with information being shared within a consortium of the Associated Press and the major TV networks. ...

"Bossie had known Vlasto for decades, going back to when Bossie was a Republican House investigator in the 1990s and Vlasto was covering the Clinton Whitewater investigations, according to the book. Vlasto was considered for a senior communications position in the Trump White House in the weeks after the election before pulling himself out of consideration." http://politi.co/2BayJWQ

--PER MICHAEL CALDERONE IN MORNING MEDIA: "Doyle McManus is taking a buyout from the Los Angeles Times after 39 years with the paper. He said in a note to friends that he'll write occasional op-ed columns for the paper as a contributing writer, and that he plans to do more long-form pieces -- and possibly a book."

Subject: Morning Energy: Pruitt heads to House grilling today — Major flop in Alaska lease sale bodes ill for ANWR estimates — McIntyre gets sworn in at FERC today

By Anthony Adragna | 12/07/2017 05:43 AM EDT

With help from Emily Holden, Eric Wolff and Alex Guillén

WELCOME TO CONGRESS, MR. PRUITT: EPA Administrator Scott Pruitt makes his long-awaited first appearance before a House Energy and Commerce subpanel this morning where he's expected to get grilled on a host of issues. The session will be broken into two segments — 10-11 a.m. and then 2 p.m. onwards — to allow Pruitt to attend a White House meeting on biofuels (more on that below). Look for E&C Environment Chairman John Shimkus to recognize the arrangement is "not ideal, but gives members maximum ability to personally question the administrator about the agency's mission" during his opening remarks.

What Republicans will say: Expect Chairman Greg Walden to press Pruitt on budget transparency and his plans to address staffing issues: "I expect that 'Back to Basics' is not an abdication of environmental protection, but rather a rededication to mastering the most fundamental aspects of EPA's mission," he'll say, according to prepared remarks glimpsed by ME. Shimkus said his questions could touch on a range of topics, including TSCA, brownfields, safe drinking water and the agency's staffing.

And Democrats? "We're all noticing the orientation toward the environment is completely different with respect to budgeting, with respect to climate change, potentially with respect to methane, particulates," Rep. Scott Peters, a subcommittee member, told ME. "So, I just think we want to get a sense of where he's going and how he'll measure success." The committee's top Democrat, Frank Pallone, wouldn't reveal what he intends to grill Pruitt about when ME caught up to him in the hall.

Pro's Alex Guillén's expectations for Pruitt's first Capitol Hill appearance in six months: "Lawmakers have probably built up some serious questions in that time, so we could see questioning on practically any issue before EPA: the Clean Power Plan repeal effort; the Waters of the U.S. rewrite; Superfund work; proposed budget cuts; Pruitt's decision earlier this year not to ban chlorpyrifos; and his increased security and travel. Pruitt's prepared testimony offers a standard overview of his EPA philosophy."

Rally time: Environmental and public health advocates, including the Union of Concerned Scientists, Sierra Club, Business Forward and the Alliance of Nurses for Healthy Environments, will rally outside Rayburn at 9:20 a.m. to draw attention to Pruitt's lagging enforcement efforts, spending habits and overhauls of science advisory panels. Ahead of the session, the Environmental Defense Fund updated their "Pruitt Playbook" and the Union of Concerned Scientists offers some suggested questions to ask.

If you go: The hearing kicks off at 10 a.m. in Rayburn 2123.

AMERICAN OVERSIGHT

WHY PRUITT'S LEAVING: Sen. Ted Cruz has secured a meeting today at 11:30 a.m. with President Donald Trump and several Cabinet members, including Pruitt, for what he told ME is likely to be a "free-ranging discussion" about biofuels and the recent fights over the Renewable Fuel Standard. His message? "We need to find a solution that is a win-win. That is a win for corn farmers across the Midwest but at the same time is a win for blue-collar union members who work in refineries and right now are being bankrupted by a regulatory system that isn't working," the Texas Republican said. Other Senate Republicans are expected to attend as well (perhaps the ones who signed this letter). Remember Cruz still has a hold on Bill Northey's USDA's farm and conservation mission nomination, so watch to see if that's lifted as the most immediate outcome of the session.

Oilies only: Sen. Chuck Grassley wasn't invited to the meeting, his spokesman said, but not to worry: Grassley has said that a White House RFS meeting would be "a waste of time." And if there's one thing energy world knows now, it's that if you don't have Gang Grain, you got nothing.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and no one was able to name the Father Millet Cross national monument (which has since been transferred by Congress to a state park) as our nation's smallest at just 0.0074 acres when designated. For today: Which state currently has the most national monuments at 18? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ARCTIC LEASE SALE FLOP: Despite touting the "largest ever" lease sale in the National Petroleum Reserve-Alaska, BLM received just bids on seven of the 900 tracts offered, Pro's Ben Lefebvre reports . Those bids, generating just $1.2 million in high bids, came jointly by ConocoPhillips and Anadarko for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per acre. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue. Leasing of state land did quite a bit better, according to the Anchorage Daily News.

For perspective: At the price of $14.99/acre, "leasing the entirety of the Arctic Refuge Coastal Plain's 1.5 million acres would raise slightly more than $11 million in revenue for the federal government, a far cry from the billion dollar lie that Trump and Republicans are feeding the American public," the Alaska Wilderness League's Kristen Miller said in a statement. Remember the Republican budget calls for Senate ENR to kick in $1 billion in revenue (which CBO said would come through ANWR drilling), though the lease results seem to bolster skepticism from environmental advocates and Democrats about those estimates.

Situational awareness: Energy Chairman Lisa Murkowski was named a tax conferee late Wednesday, along with Sens. Orrin Hatch, Mike Enzi, John Cornyn, John Thune, Rob Portman, Tim Scott and Pat Toomey . "With Congressman [Don Young] representing the House of Representatives on our energy provisions, Alaskans will have a very strong voice at the table to ensure this bill crosses the finish line," she said in a statement.

AMERICAN OVERSIGHT

No (strategic petroleum) reservations: Count Shimkus, a tax conferee, among the backers of the Senate's approach of selling off 7 million barrels from the Strategic Petroleum Reserve as part of the final tax package H.R. 1 (115). "There was a reason to have the SPR," he told ME. "There is a credible reason to debate whether, for now and in the immediate future, there is a need." He also said he's a "big ANWR supporter" and that he doesn't see the Arctic drilling provision getting pulled from the final version.

INHOFE, PRUITT'S TOXIC LEGACY: POLITICO Magazine's Malcolm Burnley takes a deep dive into the contaminated Oklahoma region of Tar Creek, an area so poisonous that only 10 holdouts live there, and he finds a buyout program for residents that left Sen. Jim Inhofe awash in scandal and litigation. Then-Attorney General Scott Pruitt ultimately concluded an audit into possible criminal wrongdoing didn't warrant charges and he shielded his review from public release, only to have some in the state believe his efforts were designed to spare Inhofe embarrassment. Many residents in the polluted zone of Tar Creek continue to express shock that no one was prosecuted over what happened in their federal buyout program

Pruitt and Inhofe flatly denied there was any political motivation in shielding the audit. "It was important to protect the individuals' reputation that were in that investigation," Pruitt said in an interview. "You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys." One interesting fact though: Ryan Jackson, now Pruitt's chief of staff, was once Inhofe's point person on the Tar Creek issue. Photo gallery here.

Pruitt's new gig: Trump named the EPA administrator to chair the Gulf Coast Ecosystem Restoration Council, a group formed after the Deepwater Horizon oil spill restore the ecosystems and economies of the Gulf Coast, your ME host reports. Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council.

MAY FERC NOW BE WHOLE: New FERC Chairman Kevin McIntyre will be sworn in today, bringing the five-member agency to full power, Pro's Eric Wolff reports. His swearing-in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes

MORE HEARINGS COMING ON CLEAN POWER PLAN: EPA announced Wednesday it would hold additional public hearings on its plan to repeal the Clean Power Plan in San Francisco; Gillette, Wyo.; and Kansas City, Mo., Pro's Emily Holden reports. Pruitt said the change was "due to the overwhelming response" and the agency will announce the dates and locations of the meetings in the coming weeks.

SPLIT OVER EXTENDERS? Ways and Means Chairman Kevin Brady told reporters Wednesday he doesn't like the idea of moving a package of extenders this year but hasn't made a final decision yet, Pro Tax's Brian Faler reports . "It's horrible policy and process," he said. But those comments come as Thune, the Senate's number three Republican, said lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs." Doing an extenders package as the chambers work to iron out differences between their broader tax bills is likely to test tax writers' bandwidth.

AMERICAN OVERSIGHT

Shutdown watch: Congressional leaders head to the White House for a meeting with Trump on government funding today, but GOP lawmakers expect to pass a two-week spending package despite internal division within their party, POLITICO's Rachael Bade and Sarah Ferris report. House Freedom Caucus leaders have been asking for a commitment GOP leadership does not believe it can give them: a promise to "hold the line" and refuse Senate Democrats' demands for increased spending on non-defense programs.

House Democrats, including Minority Whip Steny Hoyer, hold a press conference at 10 a.m. in Cannon 234 to call on Republicans to take up additional federal assistance for Puerto Rico and the U.S. Virgin Islands. Watch here.

ICYMI: Both sides framed their arguments at a hearing of the U.S. Trade Representative over whether to impose tariffs on solar equipment imports in language aimed at swaying Trump, Pro's Eric Wolff reports.

PATAGONIA SUES OVER BEARS EARS: A coalition of groups, including Patagonia, became the latest to file a lawsuit challenging the Trump administration's downsizing of Bears Ears National Monument on Monday. Link to the lawsuit filed in Washington federal court here.

ENDANGERMENT FINDING PUSHBACK STALLS: Conservative state lawmakers and businesses that are members of the American Legislative Exchange Council on Wednesday shot down an effort to urge Pruitt to challenge a science-based endangerment finding that requires EPA action on greenhouse gas emissions. "In subcommittee, a substantive conversation occurred where arguments were made for and against the draft model policy," said Bill Meierling, executive vice president of external relations for the group. "After debate, it was clear that neither the public nor the private sector supported the draft as written."

Meierling added that "ALEC members prefer to advance policy only after a consensus opinion has been reached." Reports suggested later the resolution had been pulled in the aftermath of strong opposition, including from Exxon Mobil. Pruitt was expected to speak at the ALEC meeting on Friday but canceled due to a "scheduling conflict," Meierling said.

NO COMMENT: Murkowski forcefully urged Sen. Al Franken to step down amid sexual harassment allegations on Wednesday, but a spokeswoman declined to state whether Roy Moore would be welcome on her committee if he wins the Alabama special election next week. "We aren't commenting until after the special election and decisions about committee seats are made by conference," she said. Outgoing Alabama Sen. Luther Strange currently has a slot on the energy panel.

THERE'S ALWAYS A TIE: Congressional Democrats said Tuesday they have evidence then-national security adviser Michael Flynn sent assurances to former business partners that a U.S.-Russia energy partnership in the Middle East, which reportedly would have included more than two dozen nuclear plants in the region, was "good to go," POLITICO's Kyle Cheney reports. The revelations from a whistleblower came in a letter released Tuesday.

AMERICAN OVERSIGHT

MAIL CALL! LET'S BOOST EFFICIENCY CAPS! A collection of energy efficiency organizations, led by the Alliance to Save Energy, sent a letter to congressional appropriators on Wednesday urging them to boost "budget cap allocations for federal energy efficiency programs." Failure to do so could result in steep cuts to EPA and DOE programs across the board, the groups warn. Link here.

TAKE A GLANCE! LESSONS FROM THE RFS: The American Enterprise Institute is out with a report looking at policymaking lessons from the RFS. It argues the biofuels mandate would be better as a rate standard than a volume standard, EPA should issue multiyear rather than annual rules and that uncertainty should be explicitly incorporated into future rulemakings, among other things.

BAD SOLAR ACTORS: Campaign for Accountability released the results of a years-long investigation concluding two companies — Vivint and SolarCity — received more complaints about their sales tactics than others in the solar industry. "Unfortunately, the deceptive sales tactics of solar companies, like Vivint and SolarCity, are making rooftop solar a risky bet," Daniel Stevens, the group's executive director, said in a statement. Read it here.

DREAMS TURNED REALITY? The Center for Western Priorities is out with a report finding the Trump administration has already granted 13 of the energy industry's 24 top priorities. Read it here.

SUGGESTIONS GIVEN: American Council for Capital Formation released a paper this morning with ten ideas for improving the regulatory process. It's the product of a November 2016 roundtable with Sens. Mike Rounds, Angus King, James Lankford and others. Link here.

MOVER, SHAKER: Michael Boucher has joined Crowell & Moring LLP environment and natural resources practice as a partner in Washington. He joins from Dentons US LLP, where he led that firm's chemical, pesticide, and consumer product regulation team.

Stories from POLITICO Pro

Biofuel backers claim victory in EPA battle Back

By Eric Wolff | 10/20/2017 05:37 PM EDT

Biofuels backers were breathing a sigh of relief on Friday after EPA Administrator Scott Pruitt backed away from changes to the Renewable Fuels Standard, a reversal that left oil refiners frustrated.

Pruitt acceded to demands from Sen. Joni Ernst that he publicly promise not to pursue plans to change the biofuel program rules — changes that had been sought by oil refiners who have long complained about the costs of implementing the program that many see as a giveaway to the corn states.

AMERICAN OVERSIGHT

Pruitt's letter to Ernst, Sen. Chuck Grassley and five other Midwestern Republican senators delivered what they'd asked for: A promise not to expand the group of companies required to comply with the program, to keep the biodiesel volume requirements at levels proposed in July, to not alter the policy that strips RFS credits from exported ethanol, and to explore allowing year-round sale of gasoline with 15 percent ethanol nationwide.

The quick reversal by Pruitt — at the direction of President Donald Trump — showed the influence of the biofuel lobby, corn growers and farm-state lawmakers to scuttle changes in the decade-old policy sought by the energy industry.

"This was a basket of bad ideas for biofuels," said Brooke Coleman, head of the industry lobby group Advanced Biofuels Business Council. "And there's no way that we could have any other response than to take this approach. [Pruitt] didn't kick tires on changing the RFS, he tried to take a baseball bat to the program, and the response was matching and in response to, from a magnitude perspective, to the initial foul."

The push by the senators, as well as Midwestern governors, "made a huge difference in this matter," said Michael McAdams, head of the Advanced Biofuels Association. "In addition, the collective unity of the entire biofuels industry, including those who distribute and market these fuels, made a significant impression on the importance and support for the RFS program."

But oil refiners who have said the high cost of biofuel credits, called Renewable Identification Numbers, was costing them hundreds of millions of dollars, lamented the power of the biofuels lobby and the corn-belt lawmakers.

"The [Pruitt] letter is a result of political pressure applied by Midwestern politicians," said one refining source. "Some Midwesterners cannot accept any premise that the RFS could be improved. As a result, their overreaction included everything from holds on confirmations to even more personal threats launched at the White House and EPA."

The unified and vociferous campaign by the biofuels industry in attacking the proposal that would have lowered biodiesel volume mandates surprised some in the refining industry, as well as the political staff in the EPA, sources tell POLITICO.

The Trump administration's embrace of the oil industry had raised refiners' hopes that it could have the best opportunity in years for significant RFS changes, and refining giant Valero Energy, along with a group of Pennsylvania companies, believed they would get relief from what they considered an onerous program.

But Grassley took to the Senate floor to blast Pruitt's biofuel plans as a "betrayal" of Trump's promises to protect ethanol, and he arranged a call with Trump and Pruitt that led to the meeting in his office with Pruitt and Ernst as well as Deb Fischer (Neb.), John Thune (S.D.), Ben Sasse (Neb.), Pat Roberts (Kan.) and Mike Rounds (S.D.). Following that meeting, Ernst demanded the public statement from Pruitt, and said she would withhold her support for Bill Wehrum, who was nominated to run the agency's air office, forcing a delay in the Environment and Public Works Committee's vote until next week.

AMERICAN OVERSIGHT

Ernst spokeswoman Brook Hougeson told POLITICO, "Now that Sen. Ernst has received the assurances that the EPA will support the spirit and the letter of the RFS, she will support Mr. Wehrum."

Valero was disappointed its efforts to change the program had been shot down by the fierce political opposition.

"These senators have intervened in a regulatory process, and the proposals and concepts in the letter address RFS implementation problems to which these senators have offered no constructive solutions," Valero said in a statement. "The only unifying principle of their bullying opposition seems to be a desire to maintain the status quo at all costs and to protect windfall profits associated with unregulated trading of renewable identification numbers, or RINs. Their position advances neither the goals nor the efficient implementation of the RFS, and places U.S. manufacturing jobs at risk."

But in a statement, the White House made clear that Trump remained fully behind the biofuels program.

"President Donald J. Trump promised rural America that he would protect the Renewable Fuel Standard, and has never wavered from that promise," spokeswoman Kelly Love said in a statement. "The president has had constructive conversations with several key officials about the RFS over the past week, and he understands their concerns. The Trump administration will protect the RFS and ensure that our Nation's hardworking farmers continue to fuel America."

One energy executive said the biofuel backers were victorious because they were unified in their support for the RFS, while Republicans, the oil industry, and even the refiners were not on the same page.

"The ethanol boys won this round, no doubt, but at a pretty high cost," said Stephen Brown, vice president for federal government affairs for Andeavor. "The refining industry is anything but united on the RFS beyond a sunset as individual companies have each made investments and honed mitigation strategies to comply with the statute. As those investment decisions become increasingly operationally embedded, the industry will continue to splinter on the suite of RFS issues."

But some producers are still wary of Pruitt's pledge in his Thursday letter, and they note that he promised to release a final rule in which none of the mandatory volumes will be less than he proposed in July. For some producers, those volumes were already too low.

"There's some work to do here," Coleman said. "We won't know until the rule is done. And we recognize it's an ongoing rulemaking, it's not like they're going or republish the rule, they've said what they can say. The final rule really matters."

Back

'Largest ever' Interior Alaska oil lease sale draws little interest Back

By Ben Lefebvre | 12/06/2017 08:26 PM EDT

The Interior Department received only seven bids from two companies today in what it had billed as the "largest ever" oil and gas lease sale in the National Petroleum Reserve in Alaska.

The bids on the 10.3 million unleased acres in the NPR-A generated just $1.2 million in high bids, according to a Bureau of Land Management summary. The relatively low amount could undercut GOP arguments that opening up the nearby Arctic National Wildlife Refuge would generate $1 billion in revenue.

A BLM Alaska lease sale last year generated $18 million for 1.4 million acres offered.

Subsidiaries of ConocoPhillips and Anadarko were the only two companies that participated in the lease sale. The companies only bid for 80,000 acres, or less than 1 percent of the acreage offered. The highest bid amount was $14.99 per acre.

Low oil prices and the relatively cheap and plentiful land available for hydraulic fracturing in the lower 48 has hurt oil company interest in the out-of-the-way fields of Alaska and the Gulf of Mexico. Interior Secretary Ryan Zinke and Sen. Lisa Murkowski (R-Alaska) have pushed to open more public land to drilling, however, saying that doing so is important to increase domestic energy production.

Zinke had previously said that today's "large and unprecedented sale in Alaska will help achieve our goal of American Energy Dominance."

An Interior spokesperson did not immediately respond to questions.

WHAT'S NEXT: Republicans hope to keep ANWR drilling provisions in their budget proposal.

Democrats worry Arctic National Wildlife Refuge being lost amid tax debate Back

By Ben Lefebvre | 11/29/2017 05:17 AM EDT

Democrats' fight to keep oil and gas rigs out of the Arctic National Wildlife Refuge is losing ground as the Republican tax plan advances — and it's almost as if no one has noticed.

AMERICAN OVERSIGHT

The prospect of drilling in the untouched Alaskan tundra is as close to reality as it's been in more than a decade, with none of the political drama that in past decades turned the refuge's fate into a top-tier rallying cry for liberals. Legislation to allow drilling in ANWR is quietly hitching a ride on the tax code overhaul that Senate Republicans hope to complete by the end of the week, overshadowed by larger debates on whether the bill is a giveaway to rich people and corporations at the expense of the poor and working class.

"It's really not gotten the attention that it should," Sen. Tammy Duckworth (D-Ill.), a member of the Energy and Natural Resources Committee, told POLITICO about the ANWR provision. "It's not just the budget discussion. It's about everything else that's going on, the flurry of all sorts of other news."

Angus King (I-Maine) said Republicans were trying to shield ANWR from opposition by adding it to the larger bill rather than bringing it to the floor separately under rules, which would require it to win support from 60 senators to overcome a filibuster.

"Well, clearly the strategy is to try to get it through as part of this tax reform effort and thereby avoid a direct up-or-down vote," King said in an interview earlier this month.

The nonstop news cycle and preponderance of other concerns with the tax bill are making it difficult to focus on an issue that normally fires up Democratic voters.

"I do think that putting ANWR in the budget reconciliation package hasn't drawn as much extremist opposition because it is completely overshadowed by tax reform, which is the center of the package," said Chris Guith, senior vice president of the U.S. Chamber of Commerce's Global Energy Institute. "But there are some who aren't exactly supportive of tax reform that support ANWR, and it's possible to see ANWR bring a vote or two to help pass tax reform."

Senate Energy Chair Lisa Murkowski (R-Alaska) easily advanced legislation through her committee directing the Interior Department to hold two lease sales for drilling in ANWR over the next decade. It would raise $1 billion over that period, according to the Congressional Budget Office, making it eligible for inclusion in a budget reconciliation package that Democrats cannot filibuster.

The reconciliation package also will include Republicans' tax plan and a repeal of the Obamacare individual mandate. While Murkowski helped scuttle the Obamacare repeal push earlier this year, she says she supports ending the mandate. Murkowski's office did not respond to a request for comment.

ANWR, a swath of tundra on the northern Alaska coast, is home to polar bears, porcupine caribou and a landscape that hasn't been touched in thousands of years. Congress designated the 19 million-acre area a wildlife refuge in 1980, but it set aside a 1.5-million-acre parcel known as "10-02" for possible drilling if future lawmakers approved such a plan. The U.S. Geological Survey estimated in 1998 that part of ANWR could hold up to 12 billion barrels of oil, and President Donald Trump and Alaska Republicans have called it essential for their plans for American "energy dominance."

AMERICAN OVERSIGHT

Sen. Susan Collins (R-Maine), who is undecided on the tax bill for a several reasons, said she will support an amendment on the Senate floor to eliminate the ANWR language, but she said success there is not a prerequisite for her to vote for the underlying bill. "No it is not, but I would certainly try to get it out of the package," Collins told reporters Tuesday. Collins was the only Republican to cross the aisle on an unsuccessful amendment to keep pro-drilling language out of the underlying budget resolution, meaning it is unlikely that she would be able to strip the ANWR provision from a reconciliation bill.

But Democrats say that passing a deficit-increasing tax bill in order to open ANWR would actually harm energy-producing states. That's because the $1.5 trillion shortfall from the GOP tax cuts would trigger required "pay-as-you-go" cuts to mandatory spending programs, according to a CBO analysis sent to House Minority Whip Steny Hoyer (D-Md.).

One of the programs on the pay-go chopping block would be the energy royalty revenue sharing program carried out through the Mineral Leasing Act. Cutting those payments would lose Alaska an estimated $15 million in energy royalty payments next year alone, an amount important to a state already facing budget shortfalls.

"Communities throughout the West would be impacted by the loss of revenue, which is used to support a variety of needs including infrastructure, school funding, conservation, and recreation," Hoyer said in a statement to POLITICO. "This is yet another example of the consequences associated with forcing through legislation to add $1.5 trillion to the deficit in order to give tax cuts to the wealthy."

Pay-go cuts also would hit popular programs like Medicare and student loans, but Congress can waive the law with 60 votes in the Senate. Democrats are not yet on board with that approach.

The current push to open ANWR, coming amid a swarm of competing headlines and buried in larger legislation, has come nearer to succeeding than the GOP's two previous attempts. President Bill Clinton vetoed a budget package in 1995 that included language opening ANWR, while a Democratic filibuster thwarted a second attempt in 2005.

Environmental groups have targeted public engagement at only a handful of congressional districts. The League of Conservation Voters spent $550,000 on television ads in three Republican congressional districts. The LCV also paid for a bipartisan polling firm to probe public opinion on opening ANWR, but even that focused only on registered voters in eight congressional districts.

"The reason they're trying to sneak it into the tax package is they know they don't have the votes otherwise," said Tiernan Sittenfeld, the league's senior vice president of government affairs. "They know they can't pass it under regular order, that's why they're doing a sneak attack."

Even ANWR supporters are staying out of the spotlight.

"I haven't seen any full-out, front-page ads, nothing like that," Alaska Oil and Gas Association

AMERICAN OVERSIGHT

President Kara Moriarty said. "We're a little battle-weary, to be honest. Alaskans support opening up ANWR. There's been a few statements reiterating that."

Nick Juliano contributed to this report.

The Environmental Scandal in Scott Pruitt's Backyard Back

By Malcolm Burnley | 12/06/2017 05:57 PM EDT

PICHER, Okla. — Tar Creek, Oklahoma, is breathtaking in a terrible way: At one time the world's deepest source of lead and zinc, the three-town region is now a cratered landscape so poisonous that no one, aside from 10 holdouts, can live there. Mountains of ashlike "chat," a toxic residue from lead-zinc milling, rise majestically among the remains of homes torn from their foundations. Abandoned pets forage around the ruins. A child's teddy bear lies sprawled in a ghostly living room. A gorilla statue fronts an empty high school, atop a sign proclaiming "1A Football State Champs, 1984."

Tar Creek is also part of the environmental legacy of one of the state's—and nation's—leading politicians, Senator Jim Inhofe, and his longtime ally, Scott Pruitt, the former Oklahoma attorney general who is now head of President Donald Trump's Environmental Protection Agency. After the EPA struggled to clean up the area, in 2006, Inhofe endorsed a plan in which a trust overseen by local citizens would use federal dollars to purchase homes and businesses in the toxic region so residents could move elsewhere. Then, when the plan proved so problematic that it spawned more than a half-dozen civil lawsuits and an audit into possible criminal wrongdoing, Pruitt, as the state's attorney general, invoked an exception to state freedom-of-information laws to keep the audit from being an open public record.

Now, that decision is coming into new light as many Oklahomans clamor for the audit to be released, suggesting that its revelations will prove embarrassing to Inhofe, who played a key role in designing the buyout plan, and cast doubt on Pruitt's decision not to move forward with charges. Last week, a Washington, D.C., nonprofit called the Campaign for Accountability raised the stakes even further, filing suit in Oklahoma courts to force the release of the audit.

"If you take a look at Scott Pruitt's record, you see a general disregard for transparency," said Daniel Stevens, the group's executive director. "I don't think it's outside our bounds to say that Pruitt is trying to hide evidence of criminal wrongdoing."

Pruitt, in an interview, dismissed the idea that he was covering anything up, saying his former office's grand jury unit reviewed the audit and determined that no charges were warranted. He said he declined to make it public because he didn't want innocent people to be besmirched, even though the auditor rejected that reasoning and maintained it should be a public document. "It was

AMERICAN OVERSIGHT

important to protect the individuals' reputation that were in that investigation," Pruitt said.

Nonetheless, the mess at Tar Creek continues to follow Pruitt in other ways. As EPA administrator, he has assumed full responsibility for the still-faltering cleanup. And eyebrows were raised in Oklahoma this past January when, as Pruitt was awaiting confirmation for his EPA post, a White House spokesperson told Bloomberg News that the handling of Tar Creek was emblematic of Pruitt's philosophy: "national standards, neighborhood solutions."

Pruitt, in an interview, said he knew nothing about the Bloomberg article, saying only that he endorses the EPA's current work at Tar Creek and the principle of combining federal resources and state and local leadership, rather than the buyout that occurred before his time as EPA administrator, while he was Oklahoma's attorney general.

"I think as far as a model going forward outside of the buyout, what we're trying to do is have a renewed focus on what I think are some of the most beneficial things we can do for citizens across the country, and that's to address some of these legacy sites that have substantial environmental challenges that allow them to once again enjoy the communities in their backyard," he said.

But many residents of the Tar Creek area, who gave up their homes in a buyout they considered both coercive and corrupt, continue to blame Pruitt for the fact that no one was prosecuted. They described a program so rife with good-old-boy corruption that certain individuals received outsize payoffs while some homeowners got so little they couldn't relocate anywhere nearby; meanwhile, they said, the people hired to demolish the homes received inflated contracts through a flawed process.

"We were lied to and deceived from Day One," said Gloria Workman, who said her son has learning disabilities from growing up in the polluted zone of Tar Creek, which had lead-poisoning levels in children that were three times higher than those registered in Flint, Michigan, during the peak of its recent water crisis. "Not only were we losing our homes, we were raped in the process."

"It was a nightmare," said Mary Thompson, who was still awaiting a resolution from the trust when an EF4 tornado ripped through Tar Creek in 2008, throwing bodies and trailers through the sky, killing six people and destroying more than 100 homes. Without homes, many people took lower-than-expected buyout offers—however insufficient they were perceived to be—because they had nothing left, she said.

"They preyed on us after the tornado," said Thompson, whose home was leveled.

Nonetheless, Inhofe, in a 2015 news release touting the completion of the buyout, cast it as a success because it did not lead to an expanded federal role.

"This is an example of a government program created for a specific purpose and then dissolves after the job is completed," Inhofe proclaimed.

AMERICAN OVERSIGHT

Now, he continues to defend it but sounds less celebratory. "The first thing to know about the Superfund site at Tar Creek is that it's what's called a 'mega-site' and that it is an exceptional circumstance in every way. You can't compare it to any other Superfund site in the country," Inhofe said in a statement to POLITICO. "The voluntary relocation assistance to get people out of harm's way was right for the situation at Tar Creek, but may not be for every other Superfund—that is why state and local partnership is critical."

To many former residents, who still want the investigative report by the state auditor to see the light of day, even these modest and conditional endorsements feel like slaps in the face.

"People hate the government out here, and it's because of things like this," said Aletha Redden, a lifelong resident of the area who has a Donald Trump bumper sticker on her pickup truck. "I want Scott Pruitt to know: This is not the model."

***

A flat expanse of dusty roads and scrubby vegetation situated in the heart of Tornado Alley, the Tar Creek area was once the mainstay of the Quapaw Tribe, which was forcibly relocated there by the U.S. government in 1834. At the time, the territory had little economic value, but a half-century later, prospectors discovered enormously rich ore. By the turn of the 20th century, companies broke ground with drill rigs on Quapaw land.

Many of those firms made fortunes, luring white settlers into an uneasy state of coexistence with the Quapaw. Tar Creek proved to be the deepest reservoir of lead-zinc ore in the world, producing a whopping $1 billion in minerals between 1908 and 1950, according to the Oklahoma Historical Society. Picher, the largest of the mining towns, swelled to a population of 14,000.

Almost every aspect of life in Tar Creek traced back to the mines. The high school took on the mascot of a gorilla, a reference to workers in the mines who broke up boulders with hammers. Children played in sandboxes filled with chat, the chalky mining debris. Teenagers earned the nickname "chat rats" for climbing up the pillowy piles of toxic rubble throughout town and rolling tires down their slopes.

By the end of World War II, however, the boom was over. Most of the mining companies decamped for richer pastures. For the families left behind—including that of Yankees slugger Mickey Mantle, who grew up in the Tar Creek area in the 1940s—it was a slowly unfolding disaster. The extent of Tar Creek's collapse was reflected in the words of John F. Kennedy, who barnstormed into Joplin, Missouri—25 miles away from Tar Creek—in the closing days of the 1960 presidential campaign.

"My own judgment is I know no tougher occupation in the world that [sic] to be a miner, lead, zinc, coal. I am always glad to meet them because I think they live with peril," Kennedy declared. "They have as tough a life as there is. Every other one whose hand you shake has a finger off, a foot crushed, the chances of in 20 years their having a bad accident are more than any of the rest of us. And yet in this community and in West Virginia and Idaho and in other sections of the United States, there has been no group that has been harder hit, no group that has

AMERICAN OVERSIGHT

been more forgotten."

Indeed, after the last prospector looking for ore packed up and left in the mid-1970s, people looked to casinos and farming to make a living. But the residue from decades of mining was poisoning them. In 1979, acid mine water leached into the ground, threatening the area's aquifers, killing fish and turning creeks a rusty orange color. When the federal Superfund program—designed to clean up the nation's most polluted and contaminated land—kicked off in the early 1980s, Tar Creek was named to the inaugural National Priorities List. It's still on the list.

The EPA has spent more than $176 million over the past 25 years on cleanup work inside the 42-square-mile-area, on projects from plugging mine shafts to removing contaminated surface soil in people's yards. Though the amount of money sounds large, it hasn't been nearly enough to remove the toxic dangers, and many residents insist the cleanup was mishandled from the get-go. In some cases, the removal of soil resulted in sloping yards, which, during bouts of rain, caused flooding and mold inside houses. In 2000, the FBI raided the offices of the EPA's prime contractor at Tar Creek, Morrison-Knudsen. The company later settled a lawsuit brought by the federal government alleging false representation of billing and progress reports for a sum of $1 million. In the settlement, the company made no admission of wrongdoing.

Meanwhile, the environmental hazards began to multiply: Shortly after the start of that Superfund spending spree, in 1993, researchers at the University of Oklahoma found that 34 percent of Quapaw children were living with lead concentrations above the federal limit. Further studies found alarming rates of lead and arsenic in both the tribal and non-tribal populations. In 1997, a university-lead study estimated that 21 percent of children near Tar Creek had elevated blood-lead levels (defined as 10 micrograms per liter at the time), which is three times higher than the highest measurements found in Flint, Michigan, in 2015. The learning disabilities and memory loss that had plagued the schools and curtailed lifespans for decades suddenly had a culprit.

As the dangers became ever-more visible and the cleanup lagged, residents rallied around the idea that the government should quickly buy them out of their homes, rather than wait for the hazardous materials to be removed. They thought they might have an ally in the state's senior senator, Inhofe, a Republican who was chair of the Senate Environment and Public Works Committee. But Inhofe, who has a skepticism about environmental science that exceeds that of any of his colleagues, refused to consider the idea. "There will never be a buyout. I promise you that," Inhofe told the *Tulsa World* in late 2003.

Inhofe's refusal to take action of any sort was often criticized in local press, due in part to the relentless attacks of a young Democratic congressman named Brad Carson. "If you'd asked people in Oklahoma politics at the time, they'd say we were mortal enemies," said Carson, referring to himself and Inhofe. "I was elected [to Congress] in 2000, and my goal was to untie the Gordian knot. The area is desperately poor. If it was in suburban Tulsa or Oklahoma City, there would've been outrage."

In 2004, Governor Brad Henry signed a bill authorizing the use of state dollars for the relocation

AMERICAN OVERSIGHT

of roughly 100 families with children under the age of 6. Under pressure to take further action, the senior senator began to come around. At first, he secured $2 million in federal funding to pay for a study that discovered that 286 homes within Tar Creek were at risk of being swallowed up from cave-ins of underground mine shafts. This provided an opportunity for Inhofe to reverse himself on the buyout, supporting it on the grounds of protecting residents from cave-ins.

"The stability with the underground mine workings was worse than anyone had previously been thought," recalls Ed Keheley, a retired nuclear engineer and native of Picher who co-authored the study's final report. In the spring of 2006, Inhofe announced a joint federal and state buyout program that would begin with $20 million in funding, with the express purpose of relocating any and all people who'd voluntarily leave Tar Creek.

Having once opposed the buyout to his political detriment, Inhofe now used his clout to keep on funding it, but with the idea that decision-making would be concentrated among local leaders, not the federal government. With Inhofe's support, the Oklahoma legislature created a nine-member panel called the Lead Impacted Communities Relocation Assistance Trust to assume control over the project. The members were all volunteers, helping their community, but some had a vested interest in the buyout: They included, for example, a local banker whose institution would later give loans to people to help them relocate; local property owners whose own homes—and those of relatives—would be subject to the buyout; town officials; and a leader of the Quapaw Tribe.

Inhofe cast himself in the role of the community's protector, putting out a 2008 campaign ad that declared: "Tar Creek: poisoned earth, the threat of schools and churches sinking into abandoned mines. Everyone thought it would be too much to tackle, except for one stubborn man named Inhofe."

But over a five-year period, the buyout would become the subject of a host of civil lawsuits and the subject of a state investigation.

***

The local members of the trust—few, if any, of them schooled in environmental management—had two major tasks: figuring out how much each property owner should be paid for their home or business, and then choosing a company to demolish the properties. Both tasks would become the subject of complaints about cronyism, with residents saying the trust members rewarded their friends and politically connected individuals.

It didn't help that the trust often met behind closed doors, and that the vice chairman of the trust resigned within a year. The trust's sole employee, operations manager Sonya Harris, also quit, declaring in her resignation letter that she could no longer continue "with a clear conscience without recommending a change; I will not place myself in a position to be perceived as approving of the operations to this point."

The first case to raise eyebrows involved the mayor of Picher, Ernest "Sam" Freeman. In 2005, when the buyout was first being discussed as a probability, he acquired three large parcels of

AMERICAN OVERSIGHT

former mining land covered with chat from the Picher Development Authority, which he chaired. Freeman bought them at 3 cents per square foot, for a total price of $2,088.50, according to the findings of a state audit at the time. It was, the audit declared, a violation of state laws forbidding members of public boards from entering into contracts with those boards. Ottawa County District Attorney Eddie Wyant called on Freeman to return the properties to the development authority in lieu of charges.

"If Sam wanted to buy that land, he needed to get off the board and purchase it legally," Wyant told a local newspaper at the time. "I am not one to put anyone in jail over this, but he needs to clear it up." Wyant, when reached by phone, declined to comment further.

Freeman returned the land, but, in a move that enraged some neighbors, profited off it anyway. The trust had decided that, because so much former mining land had been taken over by state authorities and tribal members, those who owned mobile homes or other shelters on land they didn't own would be eligible for buyouts. Freeman made a claim based on the fact that he had been maintaining and renting out homes on the chat-infested property for years before he tried to buy it.

Trust documents show that Freeman received at least $274,000 from the buyout, more than half of which came from the same lots he had been ordered to return by law enforcement. (Freeman told POLITICO a payout of more than a quarter-million sounded accurate enough, though he declined to provide an exact figure.) Neighbors suspected cronyism. Freeman, who is no longer mayor, denied receiving any preferential treatment. "These people thought I bought the lots to make a killing in the buyout," he said. "I don't think I got more than anyone else would have."

The size of the mayor's profit diminished public confidence in the trust, just as it was engaged in the most delicate part of its task, figuring out how much to pay each individual property owner. Property owners were supposed to receive fair market prices as if pollution hadn't existed in Tar Creek, based on the sales of similar properties elsewhere in northeast Oklahoma. But those calculations appeared to lack uniformity.

The average payout for the 695 properties involved in the buyout was just over $65,000, but the disparity in prices between two properties could be dramatic. Residents complained about lowball offers on some decent properties and overly high payouts for others that were rundown or minuscule in size.

"I got $3,000 for my gun shop. It took me $16,000 to build it," said former Tar Creek resident John Frazier.

Wally Long said he and his wife got $35,000 for their Dairy Queen, while another Dairy Queen right up the road got substantially more.

"We were told [by the trust] that's all the money there is," Long said. "It bothered my wife a lot. She put 23 years of her life into this business."

Meanwhile, a trust member named Janell Trimble got $185,000 for her house, and her brother

AMERICAN OVERSIGHT

collected $115,000 for his fiberboard house.

"I may be a member of the [relocation trust's committee], but I honor my duties and I recuse myself when family members are involved," Trimble told the *Tulsa World* in 2008. "[B]ut as a buyout participant I also expect to be treated just like the next person."

Nonetheless, both Trimble and her brother received more than 35 percent above the average price per square foot. On the other end of the spectrum, an elderly woman named Betty Betts received an offer of $12,000 for her home; when she protested, the appraised value was raised to $20,000. Many people got so little for their homes that they had to turn around and take out loans in order to resettle elsewhere in Oklahoma. In the end, the trust finished up with millions in unspent funds.

Residents concentrated their anger on the company that the trust hired to conduct the appraisals, Cinnabar, which had previously made headlines for its management of a noise-insulation program at the Tulsa Airport, which involved multiple lawsuits . In response, the trust engaged an "appraisal reviewer" to go back over Cinnabar's work. But the reviewer, a company named Van Tuyl Associates, quickly came under criticism as well. "They [often] didn't get out of their car. They never entered these homes," said Keheley, who was a member of the trust at the time. (Van Tuyl Associates is now defunct; its former president could not be reached for comment.)

When the unrest over the buyout made the local newspapers, the trust's leadership pointed to a 95 percent acceptance rate for buyout offers. But some residents accused trustees of pressuring them with "take it or leave it" offers, according to a class-action lawsuit brought against the trustees, Cinnabar and Van Tuyl by more than 250 residents affected by the buyout. Plaintiffs also complained that they were denied the right to view the appraisal paperwork. There was even a fake camera—and posters notifying residents they were being videotaped—in the room where buyout offers were made, an apparent attempt to compel residents to take the offers, according to documents in the suit.

The suit, filed in Oklahoma district court, accused the defendants of cheating average property owners and rewarding friends and associates of the trustees. Depositions revealed an explanation for some of the inconsistencies in appraisals: For certain properties, Cinnabar expanded the boundaries of where it could find "comparables"—properties in adjacent counties whose sale prices were used to calculate the appraisals—with the approval of a state employee named J.D. Strong, who, according to the lawsuit, played a significant role in overseeing the trust.

One of the properties appraised in this fashion was that of Trimble, whose $185,000 payout, according to appraisal documents, had infuriated other residents.

When, in 2008, residents outlined their frustrations in a scathing six-page letter to Inhofe, Henry and other elected officials, Strong dictated the governor's reply, which was co-signed by Inhofe, lawyers for the plaintiffs asserted in his deposition. "I may have drafted this," Strong responded, when presented with a copy of the letter saved on Strong's computer.

In an interview, Strong defended the trust and its system of appraisals: "We knew going in that

AMERICAN OVERSIGHT

we weren't going to be the most popular. We went in with the idea that we were going to be fair. I can honestly say that, looking back, we were fair and unbiased and frugal."

During the six years the lawsuit was making its way through the state court system, both Cinnabar and Van Tuyl Associates declared bankruptcy. Eventually, the plaintiffs and the trust settled the case in 2015 for $1.3 million, which, after deducting attorney fees, meant that each resident ended up receiving an additional $2,600.

But that didn't satisfy many property owners.

"The people of Tar Creek were treated like second-class citizens, based on where they were born and lived," concluded Wally Kennedy, a columnist at the *Joplin Globe* who reported on northeast Oklahoma, including Tar Creek, for more than 30 years. "For someone to portray the buyout of the people of Tar Creek as a successful program is lying through their teeth."

***

Once the trust obtained the properties on the toxic land, the next problem was how to destroy the empty structures that were on them.

Inhofe made sure there was enough money for the job. Even as he joined fellow Republicans in condemning President Barack Obama's 2009 stimulus bill as an unwarranted giveaway, the senior senator helped secure an additional $15.7 million in the bill to help the trust finish its work.

The trust hired a local businessman named Jack Dalrymple to oversee bids for the demolition contract. He was best known for organizing an annual deer hunt for paralyzed veterans, an endeavor that earned him a lifetime achievement award from a local Chamber of Commerce. His payment was to be 10 percent of the value of the winning bid. He formulated a scoring system to evaluate bids and, in March 2010, the trust awarded the contract to Stone's Backhoe, the most expensive of all four bids. At $2.1 million, it was nearly four times the cost of the lowest bidder.

Just 14 days after Stone's was declared the winner, it asked that the contract be reassigned to two subcontractors, CWF Enterprises, a carpet-cleaning business, and Vision Construction and Management. Former residents contend that there were longstanding ties between Dalrymple and the subcontractors. Whether or not they were friends before, they soon became hunting buddies. In October 2012, local coverage of Dalrymple's annual event for paralyzed veterans pictured the heads of the two firms setting up the flag for the hunt.

One of the losing contractors filed suit against the trust and individual trustees in Oklahoma district court, accusing them of violating the state's open-meeting act and competitive bidding act. The district county judge sided with the plaintiff, reopening the bidding process.

But rather than blame Dalrymple, the trust gave him a new contract. It included a flat rate for his services, $305,472—about $100,000 more than he would have received had the contract remained with Stone's.

AMERICAN OVERSIGHT

In January 2011, a $1.7 million demolition contract was awarded to none other than CWF Enterprises, the carpet-cleaning business, which was also the least expensive of the three bids received. A month later, however, the estimated cost of the contract ballooned to $3,050,786—almost exactly 10 times what Dalrymple received in his new contract.

While many residents cried foul, Andy Lester, the trust's attorney, attributed the increase to the fact that the EPA-controlled repository for dumping debris had just closed down. Trekking the remains of the houses and businesses to a dumping ground further away caused the massive change order, and a near doubling of the contract.

Lester also defends the choice of Dalrymple to handle the bids, contending that he was an engineer with some prior experience with public contracts and that the trust members couldn't handle the process on their own.

"It is important to remember that the trust board consisted of nine members—including, for example, a physician, a school teacher, and a mushroom farmer. They were volunteers, not professionals at this kind of work," Lester said. "Jack Dalrymple is a professional engineer with significant experience. And candidly, there are very few professional engineers in northeast Oklahoma."

Nonetheless, lawyers out of the Tulsa region filed a lawsuit in 2012 under the False Claims Act that accused the trust members, Dalrymple and the heads of the companies hired to do demolition work of being part of a "good old boy network" and defrauding federal taxpayers.

Attorneys for the plaintiffs, Zach and Brad Barron, say the lawsuit fizzled when the Department of Justice took the stance that "the government didn't sustain damages" from the charges laid out in the complaint. In a false claims lawsuit, where the plaintiffs are effectively trying to recoup money that's owed to the government, a lack of willingness from the government is effectively a death knell, the Barrons said. The lawsuit was eventually dismissed.

In an interview, Dalrymple insisted the allegations of cronyism were entirely unfounded.

"There were a lot of emotions and feelings during that period," he said. "When you ask someone to leave their home, it's a tough thing. But ... there was nothing there."

***

Still, the drumbeat of complaints continued, eventually reaching the ear of Jerry Morris, the state director for Oklahoma's then-junior senator, Republican Tom Coburn.

It was no secret that Coburn, a physician who cast himself as a political outsider, didn't look upon Inhofe with any sort of fond feelings of mentorship.

"I think they were often seen as having very different approaches to politics," said David Blatt of the Oklahoma Policy Institute. "Inhofe is seen as a classic, pork-barrel politician who'd bring

AMERICAN OVERSIGHT

federal dollars to Oklahoma, the more the merrier." Whereas Coburn, Blatt says, "hated that kind of politics and did as little of it as he possibly could. In fact, he spoke disdainfully and caustically about it the whole time he was in the Senate."

Coburn was not shy about stepping on his fellow Republican's toes. Morris forwarded a memo with a lengthy list of allegations related to the awarding of contracts in the Tar Creek buyout, especially regarding the demolition work, to then-Attorney General Pruitt. In April 2011, Pruitt asked the state auditor and inspector, Gary Jones, to look into the memoranda sent from Coburn's office.

"I have determined that these concerns are serious in nature such that an investigation of the matter is warranted," Pruitt wrote to Jones. A 17-point list of allegations for Jones to investigate followed, including whether there was collusion between Dalrymple and the contractors hired to do the demolition work.

After spending almost two years on the investigation, Jones turned over the results of the audit to the attorney general's office in January 2014, apparently believing it had uncovered important information.

For a year and a half, the attorney general sat on the findings. Then, in May 2015, Pruitt announced that he wouldn't press charges. In addition, he vowed to keep the audit secret by refusing to release it.

Jones fired back at the attorney general's office days later, penning a letter to Pruitt that described his rationale for withholding the audit as "baffling."

"To our knowledge, the individuals named in the report are members of a public trust or contractor whose services were retained as part of this substantive project," Jones wrote. Further, he contended, "our office has received no inquiries from you or your staff regarding the content of the audit report."

Pruitt justified the secrecy by comparing the investigation results to the findings of a grand jury. "Specifically, our office is concerned about publication of unsubstantiated criminal allegations against private citizens," Pruitt wrote in a 2015 statement.

In an interview with POLITICO, Pruitt appeared to go one step further, suggesting the audit had in fact been vetted by a grand jury.

"You're addressing issues that it's been some months since I've looked into," Pruitt said. "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and, as such, it was important to protect the individuals' reputation that were in that investigation."

But when asked to clarify, a Pruitt staff member indicated that he was using the term "grand jury" as shorthand for the Multi-County Grand Jury Unit, a division of the AG's office, headed at the time by a Pruitt appointee, which decides whether to take cases to a grand jury for

AMERICAN OVERSIGHT

indictment.

It's not the same as a grand jury finding. Nonetheless, the attorney general's office, now overseen by Mike Hunter, Pruitt's former top deputy, has denied all open records requests for the audit, declaring it to be "under the supervision of the Multi-County Grand Jury Unit." A spokeswoman for the Oklahoma attorney general's office said that if there was in fact a grand jury, the office couldn't confirm or deny that.

These rationales befuddle open records experts.

"I don't think there's anything in the law that would prohibit it [the investigation] from being released," said Joey Senat of Oklahoma State University, the president of FOIA Oklahoma. "The law doesn't require that the audit be kept secret. What would its release be harming? They've closed the investigation and decided not to prosecute."

Jones, who is now running for governor, reiterated his call for the attorney general's office to release the audit, saying in a statement that "regarding any investigation of this kind, we always err on the side of transparency and the people of Oklahoma have a right to know."

Concluded Senat: "When you have the state auditor [Gary Jones] saying these are not unsubstantiated claims and this is a serious problem, good government would call for letting the public know what happened and showing the public the audit. Transparency helps alleviate a lot of concerns about favoritism, corruption, and incompetency—if those are indeed unfounded."

***

Tar Creek today looks like an abandoned landfill. Illegal dumping has added a fresh layer of grime to the already ruined patch of earth. Giant craters from collapsed mine shafts, some as large as 200 feet in diameter, are filled with Bud Light cans, shotgun shells and the tangled remains of kids' playground equipment. "We call this urban renewal, Picher style," quipped former resident Gloria Workman.

Abandoned houses that were not part of the buyout are now coated with graffiti. The charred remains of the former mining museum in Picher, which burned down at the hands of arsonists, stands as a teetering monument to Tar Creek's former way of life. And the sense of danger and destruction extends beyond the former buyout area: On rainy days, local fields used for football practice bleed a toxic shade of orange.

The EPA is continuing its now 33-year-old cleanup effort, and it's thrust the Quapaws back into stewardship of the land. Although the tribe leased away or sold off significant chunks of Tar Creek to mining companies throughout the 20th century, the Quapaws have at least temporarily regained control of all of it. Since 2012, the tribe—a sovereign nation with roughly 5,500 members—has been the primary EPA contractor for environmental remediation at Tar Creek. It's the first time any tribe has been a prime contractor on a Superfund site, assigning all the contracts and overseeing all the work.

AMERICAN OVERSIGHT

"It's a great story," said Craig Kreman, assistant environmental director of the Quapaw tribe. "We're employing tribal members a lot of the time and members of the community. So that income [from the EPA contract] stays here in this community and is being spent in this community. We're not hiring a contractor out of Georgia."

Every day, a steady stream of trucks haul away more than 2,000 tons of soil saturated with cadmium, lead and other metals at the site. Each patch of earth requires years of passive soil treatments before it tests clean enough to plant row crops like winter wheat. Half-acre by half-acre, the hope is that Tar Creek can be put into productive agricultural use decades from now.

In August, after touring the abandoned area and surrounding towns, Pruitt's senior adviser Albert "Kell" Kelly, praised the EPA's efforts surrounding Tar Creek in sweeping terms: "People from all across the country count on the Superfund program to address pollution and revitalize their communities. Tar Creek cleanup is an excellent example of how the program should work. State and local partners, tribal partners, and EPA—all working together year after year to address historical pollution at this mega-site. It's cooperative federalism working at its best."

But many local observers, including Ed Keheley, aren't nearly as positive.

"Usually, the EPA comes in, they do their dirty work, sprinkle some wheat seed, take a picture to show Congress, and next year it looks like this," he said, pointing to a barren pasture. "Clearly, the EPA hasn't had the best interests of the people at heart. So I get personally offended when people like Scott Pruitt suggest otherwise."

For his part, Pruitt announced a fresh grant of $5 million to the Quapaw-led project last May, and he is quick to distance this experiment in local control from the one that preceded it.

"We [the EPA] can't impact the buyout. We didn't authorize the buyout. I didn't manage the buyout and its unique situation," Pruitt said. "I think what's most tangible is what we can do together with the tribe to advance and continue remediation."

When asked to respond to the undying complaints of residents in rural Ottawa County, where Tar Creek is located—a county in which Trump received 71 percent of the vote in November 2016—Pruitt changed the subject. "I had no experience with Tar Creek, to be honest with you," he said.

That's true, except it was his office's decision, when he was attorney general, not to prosecute the people accused of mishandling the trust money, Keheley and other local residents point out.

But what galls them more than the failure to prosecute is the failure to release the results of a government investigation—an audit that they believe will raise questions about Pruitt's unwillingness to press charges and cast a negative light on a project near and dear to Inhofe's heart.

Pruitt's connections to Inhofe are extensive. One of Pruitt's first hires as EPA chief was Ryan Jackson, a longtime Inhofe staffer and the senator's point person on Tar Creek, who is now

AMERICAN OVERSIGHT

Pruitt's chief of staff. He also brought on four other former aides to Inhofe, the Senate's leading proponent of the idea that man-made pollution contributing to climate change is a conspiracy and a hoax. Three of them are Pruitt's senior advisers on air, climate and legal issues.

"It gives me a level of comfort to know that we have a bureaucracy that's actually going to be serving instead of ruling," Inhofe told the *Washington Post*, applauding Pruitt for hiring his staff.

Numerous veteran Oklahoma political watchers, some of whom spoke to POLITICO on condition of anonymity, suggest that there may be an ulterior motive in Pruitt's embrace of Inhofe: It's widely believed that Pruitt, who is 49, wants to run for Inhofe's seat when the senator retires. Many observers think Inhofe is unlikely to seek reelection in 2020, when he'll be 85. And some have noted that Pruitt's decision not to advance the case against the buyout trust spared Inhofe the embarrassment of seeing the program he personally tailored and promoted go down in scandal.

"Pruitt is a rising Republican political star previously in Oklahoma and now nationally," said one journalist who closely follows the Oklahoma political scene. "There have been rumblings that Pruitt might have his eye on higher office. ... Pruitt would do everything to keep Inhofe close, assuming he wants to run for that seat."

Wally Kennedy, the *Joplin Globe* columnist who has covered the Tar Creek trust more closely than any other journalist, said, "My sense of the way that unfolded was that Pruitt decided he was not going to do any kind of prosecution, and then Inhofe writes a letter saying what an outstanding job the trust did. My reaction was 'Huh?'"

"The fact that the audit was not publicly disclosed tells me that somebody is hiding something," he added. "This is Oklahoma taxpayers' money being committed to ratting out what appears to be some apparent corruption. But everybody looks the other way. That's why I'm talking to you. Because if you can shed a light on this, maybe somebody will say 'We need to take a second look at this.'"

Pruitt, however, insists his decisions were strictly based on the law, and an Inhofe staffer flatly dismissed the possibility of Inhofe influencing Pruitt's decision.

"Senator Inhofe would have had no involvement in the case or in any of then-Attorney General Pruitt's decisions," the staffer said.

Pruitt was similarly bemused by the idea that there would have been any sort of political calculation behind his decision to shield the audit. The only politics in this case, he suggested, was on the part of those who want to embarrass him and Inhofe.

"You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys," Pruitt said in frustration.

Others argue that transparency in this case is not a political issue as much as a legal right.

AMERICAN OVERSIGHT

"The open records act seems pretty clear this audit should be released," said Stevens, executive director of Campaign for Accountability. "You have to ask why he's not releasing it? Pruitt should have to be held accountable for this."

Pruitt named chair of Gulf Coast Ecosystem Restoration Council Back

By Anthony Adragna | 12/06/2017 07:28 PM EDT

President Donald Trump announced today that EPA Administrator Scott Pruitt would chair the Gulf Coast Ecosystem Restoration Council.

The group, formed in 2012 after the Deepwater Horizon oil spill, helps restore the ecosystems and economies of the Gulf Coast. Pruitt was unanimously selected by Alabama, Florida, Louisiana, Mississippi and Texas, the five states on the council.

"I am honored to be selected by the states and look forward to working with the governors to continue the excellent work of this Council to further the critical mission of restoring the Gulf of Mexico ecosystem," he said in a statement.

Pruitt named Kenneth Wagner, a senior adviser, to be his designee on the council. He takes over the chairmanship from the Secretary of Agriculture.

WHAT'S NEXT: Pruitt begins his chairmanship of the group.

Powelson says McIntyre to be sworn in Thursday Back

By Eric Wolff | 12/06/2017 03:33 PM EDT

New FERC Chairman Kevin McIntyre will be sworn in on Thursday, FERC Commissioner Rob Powelson told an audience of electric power officials in Philadelphia today.

"At a general session this afternoon in Philadelphia, one of the key speakers was FERC Commissioner Rob Powelson, and during his speech this afternoon he confirmed that Kevin McIntyre will be sworn in tomorrow," PJM Interconnection spokeswoman Susan Buehler said.

President Donald Trump nominated McIntyre, a partner at the law firm of Jones Day, to be

AMERICAN OVERSIGHT

commissioner and designated him to be chair months ago. The Senate confirmed him in early November, and he received his signed commission just before Thanksgiving.

His swearing in will put to rest rumors that either the Trump administration or McIntyre himself were delaying his start date to give current Chairman Neil Chatterjee enough service time to make staffing changes. Chatterjee will miss that deadline by a day.

It also puts McIntyre in charge of the process initiated by Energy Secretary Rick Perry that is aimed at supporting coal-fired and nuclear power plants in an effort to protect the power grid's resilience. Action on that proposal is expected by Monday.

EPA to hold more hearings on Clean Power Plan withdrawal Back

By Emily Holden | 12/06/2017 03:28 PM EDT

EPA will hold three additional public hearings on a proposal to withdraw the Clean Power Plan, in San Francisco; Gillette, Wyo.; and Kansas City, Mo., the agency announced today.

EPA Administrator Scott Pruitt in a press release said the change was "due to the overwhelming response" to two days of hearings in West Virginia last week. Many environmental advocates criticized EPA for initially scheduling hearings only in coal country.

The agency will announce the dates and locations of the meetings in the coming weeks, and speakers must register.

The Obama administration, by comparison, held public hearings on the proposed climate standards in 2015 in Pittsburgh, Denver, Atlanta and Washington, D.C.

WHAT'S NEXT: Comments on the draft withdrawal are due Jan. 16.

Republicans divided over taking up tax extenders this year Back

By Brian Faler | 12/06/2017 05:40 PM EDT

Republican leaders are divided over whether to take up a second tax-cut bill this year.

AMERICAN OVERSIGHT

Senate Republicans want to move legislation reviving a rump group of tax "extenders," separate from their more sweeping plan to rewrite the code.

But the House's top tax writer isn't so sure.

"I don't like the extenders," said House Ways and Means Chairman Kevin Brady (R-Texas). "It's horrible policy and process."

"No decision yet," he added, saying lawmakers need to talk it over.

His comments came after Sen. John Thune, the chamber's No. 3 Republican, said today lawmakers will revive biodiesel, geothermal and other energy-related breaks along with other "cats and dogs," including a tax credit to maintain short-line railroads.

Thirty-four temporary tax provisions expired at the end of last year, including 16 energy ones, and lawmakers are now facing demands to revive them. Some want to attach the provisions to funding legislation needed to keep the government open H.J. Res. 123 (115).

Many Republicans had sworn off the "extender" ritual after a 2015 tax agreement made many of the breaks permanent while giving others what lawmakers said was one final extension — which, for some, ended last year.

Putting together an extender bill, even as lawmakers negotiate a final compromise on their tax-overhaul plans, is likely to test tax writers' bandwidth.

Solar pitches target Trump at USTR hearing Back

By Eric Wolff | 12/06/2017 03:46 PM EDT

Supporters of tough trade tariffs on solar energy equipment and their opponents squared off again at a hearing of the U.S. Trade Representative today. with both sides coloring their arguments in language aimed at swaying the White House.

The two companies seeking tariffs on foreign shipments of solar panels and cells, Suniva and SolarWorld Americas, pressed the case that barriers were vital for protecting U.S. manufacturing of the clean energy technology because of its importance for national security — issues at the heart of President Donald Trump's "America First" agenda.

"A strong remedy is required to persevere the U.S. industry, provide breathing space for this American-invented manufacturing technology," said Matt Card, vice president of operations for bankrupt Suniva. "Anything less would ... result in the loss of this industry. That would have a

AMERICAN OVERSIGHT

dramatic negative impact on national security."

Witnesses at the hearing opposed to instituting tariffs raised the same issues, but contended that trade barriers would threaten other businesses, and that the benefits of tariffs would help only a narrow segment of the solar industry.

"Factories in South Carolina and across the nation would suffer from solar tariffs," South Carolina Gov. Henry McMaster told the panel. "While there is only one operating factory in the U.S. petitioning for these tariffs, there are over 50 American-owned factories employing thousands of people that would be the ones harmed, including a steel mill in South Carolina that provides American-made steel for many of the U.S. factories that produce metal equipment for the utility scale solar farms."

The panel, which included representatives from the departments of Energy, Treasury, State, Labor and Commerce, and from the Council of Economic Advisers, appeared unmoved by the national security arguments, and instead peppered parties with detailed questions about the potential tariffs' impacts on U.S. solar power demand. Panel members also questioned whether a few years of trade protections would be enough time for Suniva and SolarWorld to hike their production enough to catch up to overseas competition.

They pressed witnesses from both side on how tariffs would effect the domestic solar market, whether a modest tariff would be effective, and their opinions on the recommendations the U.S. International Trade Commission sent the White House last month. ITC members recommended a range of options, from sliding scale of tariffs to a cap on total shipments.

The Trade Representative will send the White House a recommendation, and Trump has until Jan. 26 to make a decision.

Environmentalists lost big on LNG exports. Now what?

After years of fever-pitched opposition to liquefied natural gas exports, the Sierra Club quietly pulled its last LNG lawsuit from federal court last month. The withdrawal followed a series of losses in similar cases, a subdued end to environmentalists' chief legal campaign against shipping U.S. natural gas around the world.

Subject: POLITICO's Morning Agriculture: Perdue hits the road in search of farm bill 'roots' — The Almanza era draws to a close — Mexico names new chief NAFTA negotiator

By Catherine Boudreau | 08/01/2017 10:01 AM EDT

With help from Eric Wolff and Adam Behsudi

PERDUE HITS THE ROAD IN SEARCH OF FARM BILL 'ROOTS': We'll spare you the Clark W. Griswold joke and get right down to it: Agriculture Secretary Sonny Perdue is set to depart on a five-state farm bill tour via RV, a journey that begins Thursday at the Wisconsin State Fair and signals the secretary's intent to be "intimately" involved in development of the 2018 measure. Perdue's summer road trip - dubbed "Back to Our Roots" - will also bring him to Minnesota, Iowa, Illinois and Indiana, USDA will announce this morning. His schedule is packed with listening sessions, to allow him to hear from producers and consumers across the country who are "on the front lines of American agriculture and ... know best what the current issues are," Perdue said in a statement. He'll have some fun along the way, attending a Minnesota Twins game with USDA employees and popping in at Indianapolis Colts training camp for an event on the NFL's "Fuel Up to Play 60" initiative.

"USDA will be intimately involved as Congress deliberates and formulates the 2018 Farm Bill," Perdue said in a statement. "We are committed to making the resources and the research available so that Congress can make good, facts-based, data-driven decisions. It's important to look at past practices to see what has worked and what has not worked, so that we create a farm bill for the future that will be embraced by American agriculture in 2018."

That would mark a significant departure from the USDA that Congress came to know under former President Barack Obama. While Obama included changes to crop insurance and other farm bill programs in his annual budget, former Agriculture Secretary Tom Vilsack largely stayed out of negotiations over the legislation.

Does Sonny do encores? Yup. A second RV tour is planned for later this summer, though details have yet to be announced. The trips will be documented on Perdue's Twitter account under #BackToOurRoots.

HAPPY TUESDAY, AUGUST 1! Welcome to Morning Ag, where your host would categorize this as a crime of passion. You know the deal: Thoughts, news, tips? Send them to cboudreau@politico.com and @ceboudreau. Follow the whole team at @Morning_Ag.

TEXANS FRET ABOUT NEXT GENERATION OF FARMERS: Sticking with the 2018 farm bill for a moment ... House Agriculture Chairman Mike Conaway said at the panel's field hearing in San Angelo, Texas on Monday that he wants to get a farm bill on the House floor by the end of this year - echoing a goal that his Senate counterpart, Pat Roberts , outlined last week. Over the course of three hours, some 80 farmers and ranchers, food bank employees, agricultural bankers and conservation groups discussed their concerns and suggestions on farm policy to

AMERICAN OVERSIGHT

Conaway, ranking member Collin Peterson and six other committee members.

Calls for returning cotton to Title I so it can qualify for commodity supports, improving livestock disaster assistance and strengthening conservation programs like CSP and EQUIP were plentiful, but the more passionate statements came from producers who fear the next generation won't be on the farm for a variety of reasons: the lack of equity needed to secure financing; the constant rise in the cost of pesticides, seeds, and equipment while commodity prices slump, which makes it difficult to make a profit; and the deteriorating economic condition of rural America.

"I know five young growers who went out of business in the last three years," said Tony Dill of the Western Peanut Growers Association. "This is a very severe issue. I see no future in our country if we don't do something for younger farmers. A lot of us older farmers are living on equity, and younger farmers don't have that equity to get started."

THE ALMANZA ERA DRAWS TO A CLOSE: Al Almanza, administrator of the USDA Food Safety and Inspection Service, retired on Monday after 39 years at the agency. Secretary Perdue, in an email to staff, announced that two career employees will take on temporary leadership roles, beginning today: Paul Kiecker will be FSIS acting administrator, and Carmen Rottenberg will serve as acting deputy undersecretary for food safety - a post Almanza also held from September 2014 to December 2016.

In a farewell message to USDA employees last week, Almanza said highlights of his tenure include modernizing the poultry inspection system, reducing foodborne illnesses from listeriosis and E. coli and implementing stricter performance standards for campylobacter and salmonella in poultry.

The new line-up. Rottenberg has spent nearly six years in leadership roles at FSIS, including as deputy administrator and chief operating officer, overseeing the agency's $1-billion budget. Kiecker joined FSIS in 1988 as a food inspector and has held a number of positions since then, most recently as deputy assistant administrator for the Office of Field Operations.

MEXICO NAMES NEW CHIEF NAFTA NEGOTIATOR: Mexico is building out its negotiating team in preparation for the much-awaited renegotiation of NAFTA, naming Kenneth Smith Ramos on Monday to be its chief technical negotiator. Ramos, head of the trade and NAFTA office at the Mexican Embassy in Washington, will work just below Economy Secretary Ildefonso Guajardo and Undersecretary for Foreign Trade Juan Carlos Baker in leading the negotiations, a Guajardo spokesperson told our colleagues at Morning Trade.

Guajardo, speaking to reporters on Monday, highlighted Ramos' past work in Mexico's agriculture department as well as its economy ministry. "He is a man who has had a very, very long, intense and brilliant career in all foreign trade topics," Guajardo said in Spanish.

RFS HEARING BE POPPIN' LIKE CORN: EPA is throwing its annual Renewable Fuel Standard bash today, an all-day hearing for the agency to get feedback on its proposed rule, which will set the amount of biofuel that must be blended into the nation's fuel supply. The agency kept the ethanol mandate at the legal maximum of 15 billion gallons, but it dramatically

AMERICAN OVERSIGHT

cut the amount of advanced biofuels, and it will surely get an earful on that.

RFS A-listers: EPA will hear from: Iowa Gov. Kim Reynolds; Nebraska Gov. Pete Ricketts; Chris Bliley of Growth Energy; Bob Dinneen of the Renewable Fuels Association; Frank Macchiarola of the American Petroleum Institute; and Donnell Rehagen of the National Biodiesel Board. Reynolds, whose state leads the nation in ethanol production, will tell EPA she's glad it is on track for an on-time rule (they're actually a bit behind schedule), but wants the agency "to raise the advanced biofuel, biodiesel and cellulosic volumes. The RFS is a bold policy, and Iowans and the industry as a whole have always risen to the challenge."

NMPF: PLANT-BASED FOOD PETITION 'INAPPROPRIATE': The Good Food Institute's effort to revive a 20-year-old soy industry petition that requested FDA allow plant-based products to be labeled as "milk" is as "inappropriate today as it was ... in 1997," the National Milk Producers Federation said in response Monday. "Nothing has happened in the intervening time period to allow the combination of soy powder, water, emulsifiers, stabilizers, sugar, sodium and added vitamins to magically become milk," NMPF President Jim Mulhern said in a statement. "Regardless of what food technologists might try, milk still only comes from mammals."

GFI also filed its own petition on Monday, asking FDA to codify its existing practice of allowing manufacturers to use common dairy names to broadly label plant-based foods and beverages. The FDA told MA in response on Monday that it is "reviewing the matter and takes action in accordance with public health priorities and agency resources."

THIS TAX REFORM TIMELINE IS ... 'AGGRESSIVE': The White House expects tax reform legislation to move quickly through Congress this fall, clearing the House in October and the Senate in November, legislative director Marc Short said Monday. Markups will begin in September. "So that, I think, is an aggressive schedule, but that is our timetable," he said during an event hosted by a pair of conservative political groups backed by the billionaire Koch brothers - Freedom Partners and Americans for Prosperity.

Short's ambitious timeline is the most specific to be laid out by either the White House or Congress in recent months, reports Pro Tax's Aaron Lorenzo. It jives with a joint statement issued by administration and congressional negotiators last week, which said the expectation is that tax reform legislation will move through committees "this fall," followed by consideration on the House and Senate floor. Republicans are planning to use special instructions in a budget resolution - should it advance through Congress - to pass tax reform with a simple majority in the Senate in order to short-circuit a Democratic filibuster. But Short also suggested a Republican-only pathway isn't completely necessary. Some Democrats might get on board, particularly those up for reelection next year in states Trump carried, he said.

THE 2018 WATCH: CASEY, TESTER GET NEW CHALLENGERS: Senate Agriculture Committee member Bob Casey (D-Pa.) has a new challenger in 2018: GOP Rep. Lou Barletta, two Republican sources told POLITICO's Kevin Robillard. Barletta, an early supporter of President Donald Trump, is an immigration hard-liner serving his fourth term in the House. Trump has publicly suggested Barletta challenge either Casey or Democratic Gov. Tom Wolf.

AMERICAN OVERSIGHT

Barletta, a former mayor of Hazleton, Pa., is the biggest name in a large Republican field challenging Casey, a moderate who has emerged as a fierce Trump critic.

Tester territory: Montana State Auditor Matt Rosendale on Monday formally launched his campaign to challenge Democratic Sen. Jon Tester next year, and gave a heads-up to POLITICO's Elena Schneider. A handful of Republicans are already in the race, but Rosendale is the first statewide officeholder to jump in. Tester, an organic farmer and two-term incumbent, is one of the GOP's top Senate targets. Rosendale ran for Congress in 2014 and loaned his own campaign more than $1.1 million before losing to Interior Secretary Ryan Zinke in the Republican primary.

"I've always said that I will serve wherever Montanans feel I can be the most effective, and I've gotten calls from across the entire state from people who are not satisfied with the job that Tester is doing. He acts like a farmer when he's here, but he goes back to Washington and votes just like Chuck Schumer," Rosendale said. "We recognize that even if you go into federal government well-intentioned, there comes a time when you have been there too long."

U.S., BRAZIL TO COMPETE FOR CORN CUSTOMERS: Brazil's corn production in the 2016-17 season is forecast to be a record 97 million tons, while U.S. farmers are predicted to harvest their second-biggest crop this fall - setting up intense competition for buyers in the second half of 2017, Bloomberg reports . Two decades ago, Brazil wasn't even on the United States' radar as a competitor in corn exports, but has since ramped up shipments. In 2016, the country ranked third in corn exports, while the U.S. was No. 1 and Argentina No. 2, according to USDA data. Japan and Mexico are the top buyers of the commodity.

U.S. corn shippers are seeing slow bookings for the coming marketing year, which starts in September, Bloomberg reported, citing USDA data. Corn shipments from Brazil are climbing, but they are projected to continue to pace behind those of the U.S. Whether Brazil can steal more market share from U.S. farmers depends partly on the value of the Brazilian real and how many growers are willing to sell crops at low local prices, one analyst told Bloomberg.

Another factor? Trump. Mexico is looking to diversify its corn supply amid the political uncertainty surrounding NAFTA 2.0 and President Trump's harsh rhetoric. But Secretary Perdue, after two days of bilateral meetings in Mexico last week with Mexican Secretary of Agriculture José Calzada, said the U.S. still has an edge.

"I did not get any indication that they're seriously considering that," Perdue told reporters during a conference call on Friday. "I think while they may talk ... as if they're having conversations, we have a corner store location for their supply," he added, highlighting the U.S. agricultural sector's competitive and logistical advantages in relation to its southern neighbor.

ERS: FARM PRODUCTIVITY KEY TO FOOD SECURITY: Growth in agricultural productivity is strongly connected to improvements in developing countries' food security status, according to a report published by the USDA Economic Research Service on Monday. Investments in agricultural research and technology are central to efforts to meet the challenge of feeding a world population north of 9 billion by 2050. "On average, the faster the growth in

AMERICAN OVERSIGHT

agricultural productivity, the larger the reductions in food insecurity," the report said.

ERS analyzed the role of trade, agricultural productivity, international aid, and better data and measurement in achieving food security gains in 76 low- and middle-income countries over the past 15 years. Since the U.S. provides about half of global food aid and support for agricultural development - between $6 billion and 7 billion annually over the last few years - the researchers said it's necessary to study factors that drive improvement if the U.S. is to reach its commitment of ending global food insecurity by 2030.

Cash is king? The report also found that for countries receiving aid, cash-transfer programs can be more cost effective than traditional methods like in-kind commodity donations, which represent the United States' largest form of food aid under the Food for Peace program. However, not all countries have sufficient food markets or the administrative capability to broadly implement cash programs. Advances in IT, personal identification, banking and mobile phones support the expansion of targeted cash-transfer programs. "These innovations can ... reduce the market distortions associated with acquiring, distributing, and storing commodities found in traditional in-kind programs," the report said. Read it here.

FARM CREDIT ADMIN NAMES NEW IG: The Farm Credit Administration announced Monday that Wendy Laguarda will become its inspector general, effective today. Laguarda, who joined the FCA Office of General Counsel in 1990 and rose to become assistant general counsel and the designated agency ethics official, succeeds Elizabeth Dean, who retired Monday.

MA'S INSTANT OATS:

- New Food Economy has this deep dive on who owns America's farmland (hint: it's increasingly not farmers).

- The country's largest fresh-garlic producer solved its labor shortage by raising wages to $13. The Mercury News explores whether it's an isolated success story or a fix for U.S. agriculture more broadly.

- A group of leading crop scientists is calling for a coordinated approach to research to tackle global food security threats, Feedstuffs reports.

- Researchers found that providing a 50 percent discount on the price of fruits and vegetables doubled consumers' intake of the produce. Read the study here.

EPA Morning News Highlights 03.21.18

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

AMERICAN OVERSIGHT

Detroit News: EPA chief wants to eradicate lead from drinking water

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

AMERICAN OVERSIGHT

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

AMERICAN OVERSIGHT

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under

AMERICAN OVERSIGHT

major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

Hot Air

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

AMERICAN OVERSIGHT

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

The Detroit News

https://www.detroitnews.com/story/news/politics/2018/03/20/epa-pruitt-lead-water-flint/33125283/

AMERICAN OVERSIGHT

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

"It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

AMERICAN OVERSIGHT

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

AMERICAN OVERSIGHT

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis.

Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

AMERICAN OVERSIGHT

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with the costs.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

AMERICAN OVERSIGHT

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding.

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate

AMERICAN OVERSIGHT

it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find

AMERICAN OVERSIGHT

themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: "I'm not real confident at this point."

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

"Everything that remains is going to be pulling teeth to resolve," said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House

AMERICAN OVERSIGHT

legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

AMERICAN OVERSIGHT

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

“Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

AMERICAN OVERSIGHT

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that sell grain to cooperatives at the expense of other companies. Though Senate Democrats and some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix

the so-called “grain glitch,” it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

“We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI’s background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply

AMERICAN OVERSIGHT

bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there's [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

The Wall Street Journal

https://www.wsj.com/articles/trump-to-ramp-up-trade-restraints-on-china-1521593091

Trump to Ramp Up Trade Restraints on China

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

AMERICAN OVERSIGHT

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its market and eliminate practices that disadvantage foreign firms.

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At

AMERICAN OVERSIGHT

a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading

AMERICAN OVERSIGHT

center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

AMERICAN OVERSIGHT

China Investment Corp, Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

The administration's actions on China come on the heels of plans to levy tariffs on steel and aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Tulsa World: EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'
Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. "It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there. "You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Hot Air: EPA Ends The Use Of "Secret Science" In Crafting Regulations
Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

Detroit News: EPA chief wants to eradicate lead from drinking water
The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat. "I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters. "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this." Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

New York Post: EPA head calls for 'coordinated' response to NYC lead crisis
EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis. Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts. "I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest." Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

The Philadelphia Inquirer: Philly has a smog problem. Will Scott Pruitt's EPA say so?
Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding. The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April. On Monday, Pruitt's office said it would meet the deadline.

EPA Administrator Scott Pruitt says lack of clean up of Tar Creek Superfund site is 'unacceptable'

By: Jim Myers, 3/21/18

Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation.

"It is really unacceptable," Pruitt said as he recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there.

"You don't list a site in the mid-1980s and you don't take the kind of steps we have taken historically and still have issues today in 2018."

The area in Ottawa County is contaminated by lead and other heavy metals from long-closed mining operations and is undermined with caverns that are prone to cave-ins. The Picher and Cardin communities were bought out by a federal program and are now ghost towns, but the mine wastes remain.

Pruitt blamed inconsistency, even within the EPA's 10 regions, as well as a lack of attention and focus, for slowing remediation outcomes.

"It is one of the things that seemed to be languishing as we arrived," Pruitt said, making it clear that the lack of urgency was something he found "palpable" at Superfund sites across the country.

"When it takes you 27, 28 years to make a decision — make a decision, not clean it up, not remediate, but make a decision on how you are going to remediate — that is unacceptable."

His comments came during one of several reporter roundtables he has been holding at the EPA's headquarters to mark his first year as administrator, during which he also became a leading voice in the Trump administration's major push on regulation reform.

AMERICAN OVERSIGHT

Those efforts have prompted applause from his supporters and alarm from his critics.

Recently Pruitt is rarely out of the headlines, with stories ranging from travel expenses to speculation over whether his political future might include bids for a U.S. Senate seat or even the White House.

When given the chance to comment on yet another story this week about his political options, he took a pass.

Pruitt also declined to comment when asked about a recent decision by an Oklahoma judge to allow a lawsuit filed by Campaign for Accountability to continue. The lawsuit seeks to force the release of a 2014 audit of the Lead-Impacted Communities Relocation Trust, which was created in an effort to help move residents out of communities affected by the Tar Creek contamination.

"That is during my time as attorney general," he said. "I think it is better that I just keep it focused on the EPA matters."

Pruitt, who was Oklahoma's attorney general before being tapped by President Donald Trump to lead the EPA, had declined to file charges based on the audit by state Auditor Gary Jones and also had taken steps to bar its release to the public.

According to reporting by The Oklahoman, legal action in the case continues and eventually could include an appeal to the Oklahoma Supreme Court.

Pruitt's emphasis on Tar Creek and the other Superfund sites across the country grew out of a task force he created in 2017, just months after being sworn in as administrator.

Members of the Superfund Task Force came back with a list of specific recommendations under major goals ranging from expediting cleanup and remediation to promoting redevelopment and community revitalization.

As part of that process, Tar Creek landed on a list Pruitt says he will use to keep the emphasis on the program.

EPA Ends The Use Of "Secret Science" In Crafting Regulations

By: Jazz Shaw 3/20/18

Just in case liberals didn't already have enough reasons to pin EPA Administrator Scott Pruitt's picture to their dart boards, he's just rolled out another policy change which will force the "party of science" to rely on actual science when pushing for regulatory changes. Promising to eliminate "secret science" in EPA deliberations, Pruitt is ordering all scientific studies used when considering new regulations to include publicly available data and methodologies. This was announced in an exclusive interview with The Daily Caller News Foundation.

> "We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."
>
> Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.
>
> EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

AMERICAN OVERSIGHT

> "When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

In other words, science is not being excluded from any EPA studies. The agency is simply ensuring that groups conducting studies publish the data used to reach the conclusions they forward to the EPA so it can be examined and potentially challenged if it's found to be faulty. Surely nobody who's really interested in following the science could object to that, right?

Wrong. Democrats were immediately arguing against such a move, saying that forcing research organizations to publish their figures "would reveal confidential patient data." That's a rather odd argument in a couple of different ways. First of all, there's a lot of data collected for various studies used by the EPA which have nothing to do with medical records. Examples include all of the groundwater studies done when the Obama administration was considering banning fracking.

But even in cases where medical information is required, the groups conducting the study were able to obtain the patient data. As Steve Milloy, the publisher of JunkScience.com was quoted as saying, California regularly makes such data available under the name, 'Public Use Death Files.' Other medical information can be compiled and have the patients' names and other identifying personal information scrubbed. This is already done on a regular basis.

In fact, barring some subject which might compromise national security – such as the handling of tactical weapons materials – it's difficult to imagine many true, scientific studies which couldn't publish their underlying data, making it available for peer review. So if you're still opposed to federal agencies wanting to see such data, the next logical question to ask is precisely what it is that you're hiding.

The Detroit News

https://www.detroitnews.com/story/news/politics/2018/03/20/epa-pruitt-lead-water-flint/33125283/

EPA chief wants to eradicate lead from drinking water

By: Melissa Nann Burke, 3/20/18

The head of the Environmental Protection Agency says eradicating lead from drinking water is one of his top priorities three years after the Flint water crisis, and he's worried Americans aren't "sufficiently aware" of the threat.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," EPA Administrator Scott Pruitt told reporters this week at the agency's headquarters.

"It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

Pruitt is concerned that parents and citizens don't understand the threat of lead in drinking water or toys, and "we're looking at ways we can contribute to that dialogue," he said, according to an audio recording provided by the New York Post.

"I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively," Pruitt said.

Pruitt said President Donald Trump's $1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure.

AMERICAN OVERSIGHT

EXT-18-783-F-002674

ED_001863D_00000161-00004

Pruitt didn't describe a plan for replacing the thousands of lead service lines throughout the country – a cost estimated around $40 billion to $45 billion – but stressed the need for state and local governments to invest in such upgrades, perhaps with federal grant aid.

Pruitt added he would "love" to see local governments investing more in water infrastructure.

"These water treatment facilities – they have authority to bond out, to raise fees, to invest in corrosion control, the replacement of service lines and the rest," Pruitt said. "And some of them just aren't doing it."

Gov. Rick Snyder has proposed having water customers across Michigan pay a $5 annual fee to help upgrade aging infrastructure and replace lead pipes in their local communities, but the plan hasn't gained steam in the Republican-controlled Legislature.

U.S. Rep. Dan Kildee, D-Flint Township, said what Pruitt has described isn't really a plan.

"When it comes to Mr. Pruitt, nice words don't replace pipes. It takes money. What they have proposed is really nothing when it comes to infrastructure," Kildee said of the Trump administration.

Kildee said what would help is Pruitt putting his support behind Kildee's legislation that would reduce the acceptable amount of lead in drinking water to 5 parts per billion. The current federal action limit is 15 parts per billion.

"Force federal and state governments to stare this in the face by adopting a level that is science-based that says there is no acceptable level of lead," he said.

EPA has spent a decade trying to update the rule.

Snyder called the rule "dumb and dangerous" after the Flint disaster. The state has proposed draft rules to drop the acceptable amount of lead in drinking water to 10 parts per billion by 2024.

The New York Post

https://nypost.com/2018/03/21/epa-head-calls-for-coordinated-response-to-nyc-lead-crisis/

EPA head calls for 'coordinated' response to NYC lead crisis

By: Marisa Schultz, 3/21/18

EPA Administrator Scott Pruitt called for a "coordinated" response between New York State and City officials to address the ongoing lead crisis.

Asked whether federal intervention is needed to protect New York children and tenants from lead poisoning, the Environmental Protection Agency chief urged action on all fronts.

"I think a local, state and federal response that is very coordinated and collaborative is terribly important," Pruitt said in an interview. "We each play a role. I'd love to see steps taken at the local level to invest."

Gov. Cuomo already announced an emergency declaration for New York Housing Authority buildings and pledged an additional $250 million for upgrades. But heated public squabbles over resources and responsibility with rival Mayor de Blasio have complicated progress.

Pruitt declined to weigh in on the Cuomo/de Blasio feud but encouraged broad infrastructure investment from all levels to prevent children from getting sick.

AMERICAN OVERSIGHT

"I think the governor's call for that is important and it's something we think is important as well and we need to contribute to it along with the states, local cities and towns," Pruitt said.

While the problems in NYCHA are centered on lead paint, Pruitt has primarily tackled the issue of eliminating lead poisoning from water. He raised concerns over high lead levels found at certain New York City school water fountains.

"I do think that what happened in Flint is something that could happen elsewhere," Pruitt said. "We just simply need to take steps to do all that we can to address it prospectively and proactively."

Pruitt estimated it would take $40 billion – $45 billion to replace lead service lines nationwide and suggested President Trump's $1.5 trillion infrastructure plan can assist states and cities with the costs.

"I really believe that we ought to set a goal as a country that, over the next 10 years, that we ought to work with respect to investments in our infrastructure to eradicate lead in our drinking water," Pruitt said.

He added: "It can be achieved. Some of the mental-acuity levels of our children are being impacted adversely as a result of this."

The Philadelphia Inquirer

http://www.philly.com/philly/health/pruitt-epa-smog-philadelphia-ozone-20180320.html

Philly has a smog problem. Will Scott Pruitt's EPA say so?

By: Frank Kummer, 3/20/18

Mollie Michel of South Philadelphia keeps her children inside some days because of air pollution, so she's particularly irked by a long delay by the U.S. Environmental Protection Agency to say officially whether Philadelphia has a smog problem. That designation could mean more regulation to help clean up the dirty air, she said.

"You have a city with a childhood asthma rate twice as high as the national average," Michel said to bolster her argument. A member of Moms Clean Air Force, she gathered Tuesday with a few dozen other activists and local officials at City Hall to mark the first day of spring by protesting Trump administration policies.

Whether Philadelphia is violating the federal Clean Air Act remains in bureaucratic limbo. Despite deadlines, the EPA has refused to say whether Philadelphia and some other cities, including Pittsburgh, have met a 2015 benchmark of 70 parts per billion or less of ground-level ozone in the ambient atmosphere. Being out of compliance, or in "nonattainment," has a real-world impact on the state, city, businesses and industry, and even motorists through increased regulation and funding.

The EPA was supposed to state whether Philadelphia was in compliance by last Oct. 1. Last week, a federal court ruled that the EPA, under its administrator, Scott Pruitt, broke the law by missing the deadline, and gave the EPA until April.

On Monday, Pruitt's office said it would meet the deadline.

Pruitt said during a meeting with reporters at EPA headquarters in Washington that the scope of monitoring required to answer the smog question had caused the delay.

"The agency has been running behind for a number of years," said Pruitt, who took office a year ago.

Pruitt, who said he didn't have data specific to Philadelphia in front of him, also took issue with how the monitoring program has been carried out in the past, saving money by "modeling" — using data from one area and applying it to another.

AMERICAN OVERSIGHT

"Real data is terribly important," Pruitt said. "When we go forward, we need to focus more on monitoring as opposed to modeling … You shouldn't get data from one monitor and extrapolate it over a whole area because you're not dealing with real data at that point."

He said his office is "exploring ways" to pay for monitoring.

If Philadelphia is declared to have a smog problem, the Pennsylvania Department of Environmental Protection would be responsible for crafting a plan to reduce ground-level ozone. Ozone is formed when volatile organic compounds and nitrogen oxides — created by burning fossil fuels, and power plants and other industries — combine in sunlight. Long, hot, humid days act as smog factories, so smog is expected to increase as the climate warms up.

James Garrow, a spokesman for the city's Department of Public Health, said, "Philadelphia is indeed out of compliance" as of March 1. He said the trend for ground-level ozone has been going down for years and Philadelphia expects to meet requirements within a few years.

At the protest, Flora Cardoni, an organizer with PennEnvironment, joined Democratic State Reps. James R. Roebuck Jr. and Brian K. Sims, as well as members of Deep Green Philly and the Clean Air Council, in speaking out. Cardoni said it's already been too long a wait for action.

"Philadelphians want to walk along the Schuylkill, play in Fairmount Park, and wander the historic city without worrying about choking on smog and soot," she said.

Politico

Congress struggles to clinch spending deal

By: Burgess Everett, Rachel Bade, Sarah Ferris and Heather Caygle, 3/20/18

Congressional leaders are racing to finalize a spending bill by the end of Tuesday but find themselves still at odds over a host of controversial issues — delaying plans to unveil the proposal and raising the prospect of weekend votes to avoid a shutdown.

Democrats, Republicans and the White House battled late into the night Monday and into Tuesday afternoon over whether to include provisions on President Donald Trump's border wall, a massive New York infrastructure project and the special counsel's Russia investigation, according to lawmakers and aides in both parties.

There were still a number of unresolved issues as of Tuesday evening, and multiple sources were pessimistic that negotiators would reach a deal in time to release the bill before Wednesday.

Asked how confident he was that the Senate would avoid weekend work, Sen. John Thune (R-S.D.) replied: "I'm not real confident at this point."

Dragging the talks into Wednesday would increase the chance that lawmakers pass a short-term spending bill to prevent a temporary shutdown when funding lapses Friday evening.

Several issues remain open after administration officials participated in a lengthy meeting Tuesday afternoon with top leadership and appropriations staffers that did little to break the logjam.

"Everything that remains is going to be pulling teeth to resolve," said a senior congressional aide with knowledge of the meeting, which included representatives from the White House and the Office of Management and Budget.

AMERICAN OVERSIGHT

The New York-area Gateway project is a primary issue for the White House, according to the aide, but several other provisions are also still up in the air.

Trump is likely to support the bill if the Gateway project is excluded, the military receives a major budget boost and there is a significant infusion of border security funding, White House legislative affairs director Marc Short said at the Capitol Tuesday.

House Speaker Paul Ryan (R-Wis.) told his conference that he is planning to pass the massive, $1.3 trillion omnibus on Thursday, according to House Republicans.

"I'm hoping today," Ryan told reporters when asked Tuesday morning when leaders would wrap up negotiations. He said lawmakers were not yet considering a short-term funding patch to buy more negotiating time. "There are some unresolved issues. We're working through them as we speak."

Senate Majority Leader Mitch McConnell (R-Ky.) said he would keep the Senate in until the bill is passed.

"We anticipate the House filing later today, which will give the Senate plenty of time to take a look at it and see what's in it," McConnell said on Tuesday afternoon.

Still, on the House's current schedule, the Senate would have just a day to pass the bill before government funding runs out on Friday evening — allowing for any one senator to shut the government down briefly. Sen. Rand Paul (R-Ky.) caused such a shutdown last month in protest over a budget deal.

Paul would not rule out doing everything he can to stop the spending bill if he views it as poorly as he did a budget bill in February.

"I will oppose the bill. I have to make a decision about whether or I will accept a time agreement," Paul told reporters on Tuesday.

Senate leaders are already entertaining a short-term spending bill in preparation for any antics by Paul.

"We're going to be here into the weekend, perhaps. But I think there could be some measures taken to keep the lights on. But we'll get it done," said Senate Majority Whip John Cornyn (R-Texas). "Anything can happen around here."

Congressional leaders had hoped to file the bill, which would fund the government through the end of September, on Monday night with a House vote on Wednesday. But Congress is bogged down over policy provisions that various congressional factions are trying to attach to the must-pass bill. Many lawmakers view the legislation as their last chance to get their priorities signed into law before the midterm elections.

"Negotiations continue between the four leaders. A few sticking points remain, but we are very close," said Senate Minority Leader Chuck Schumer (D-N.Y.). "I think it will be a fair compromise."

Lawmakers and aides estimated there were as many as 20 provisions still being debated. One of the most controversial is $900 million in funding for the Gateway tunnel project in New York, a key priority of Schumer and New York-area Republicans and Democrats.

Gateway supporters are trying to include language that would allow the project to apply for competitive grant money and prevent the Trump administration from squashing the project. Trump has told Republicans he will veto a bill that funds the project specifically. Schumer and GOP leaders were still battling over the provision as of Tuesday afternoon, and the New Yorker said the tunnel is of national significance despite Trump's complaints.

AMERICAN OVERSIGHT

The White House remains unmoved, however.

“The secretary of transportation has explained if you put that much money in one project it’s going to crimp projects across the country she needs to fund. It‘s also a project that a majority of House Republicans… voted against," Short said. “The president has made his wishes well known so I think we’re going to be fine."

Another sticking point: immigration. Talks to protect young immigrants facing deportation fell apart over the weekend, but congressional Democrats spent Monday and Tuesday pushing to freeze hiring of immigration enforcement officials in return for providing Trump more than $1 billion in funding on his border wall.

Democrats and Republicans are likely to agree on about $1.6 billion in border funding that would help finance some fencing and security and avoid directly funding the large concrete wall that Trump wants, according to a Democratic aide.

Republicans are seeking to fix an error in the new tax law that lowers tax bills for farmers that sell grain to cooperatives at the expense of other companies. Though Senate Democrats and some Senate Republicans are willing to rewrite the provision in exchange for a boost in Low-Income Housing Tax Credits in the spending bill, Ryan has resisted, according to people in both parties. Ryan allies say that just because he rejected an offer from Schumer to fix the so-called “grain glitch,” it doesn't mean the issue is dead altogether.

Congressional Democrats also pushed provisions to protect special counsel Robert Mueller but have been rebuffed by GOP leaders. An attempt to shore up Obamacare's insurance markets is also stalled in a battle over abortion.

Lawmakers believe neither of those provisions will be in the omnibus.

A Tuesday morning school shooting in Maryland, however, may have thrown another wild card into the mix: GOP leaders are pressing to include popular legislation that would improve the National Instant Criminal Background Check System for firearms purchases.

“We remain hopeful that Fix NICS is in the omni," Short said of the proposal to improve the FBI’s background check system.

But Democrats want a broader gun debate and note that the provision is a modest way to simply bolster existing gun laws. Meanwhile, conservatives believe it would make it more difficult for some veterans to buy a gun, which could keep that provision out as well.

"There are still some key questions. There's a NICS question, there's an Internet sales tax question, there‘s [an Obamacare] question. There's a Gateway project financing question," said Rep. Jim Jordan (R-Ohio), a conservative leader. "It looks like a lot of those things aren't gonna be in it, which is a good step, but it still spends way too much money."

The Wall Street Journal

https://www.wsj.com/articles/trump-to-ramp-up-trade-restraints-on-china-1521593091

Trump to Ramp Up Trade Restraints on China

By: Bob Davis, 3/20/18

The White House is preparing to crack down on what it says are improper Chinese trade practices by making it significantly more difficult for Chinese firms to acquire advanced U.S. technology or invest in American companies, individuals involved in the planning said.

AMERICAN OVERSIGHT

EXT-18-783-F-002679

ED_001863D_00000161-00009

The administration plans to release on Thursday a package of proposed punitive measures aimed at China that include tariffs on imports worth at least $30 billion.

But the tariffs won't be imposed immediately. Rather, U.S. industry will be given an opportunity to comment on which products should be subject to the duties. As part of the package, the White House will announce possible investment restrictions by Chinese firms in the U.S. and will direct the Treasury Department to outline rules governing investment from China.

Final details of the plan, including the amount of imports to be hit by tariffs, remain in flux, those involved with the discussions said. While the rough amount and rationale for the tariffs are expected to be disclosed on Thursday, the final decisions will come once U.S. industry has had its say, they said.

A White House spokeswoman declined to comment.

The effort stems from a monthslong investigation by the administration into Chinese intellectual property practices that found the damage to U.S. companies from forced technology transfer is $30 billion annually.

The administration has warned Beijing that it risked tariffs if it didn't significantly liberalize its market and eliminate practices that disadvantage foreign firms.

While the administration's plans to put tariffs on China have received most of the attention, it is considering other significant penalties, especially those aimed at state-owned Chinese firms. It plans to argue that Chinese state-owned firms buy U.S. technology not for commercial purposes, but to apply for military use and otherwise gain an edge in the race for global technological dominance.

The administration believes that Beijing, in requiring U.S. companies to form joint ventures to do business in China, then pressures them to transfer important technology to their Chinese partners. The U.S. also contends Beijing improperly subsidizes Chinese companies looking to overtake U.S. rivals in such advanced technologies as semiconductors, artificial intelligence and robotics.

Chinese officials have said that they are improving their protection of intellectual property and liberalizing their economy. They also complain that the U.S. hasn't given them a specific list of demands that they need to meet to head off tariffs.

The country's responses to challenges from President Donald Trump loomed large as China's leaders closed out an annual political gathering on Tuesday.

Premier Li Keqiang, the titular No. 2 leader, struck a conciliatory tone on trade with the U.S. At a news briefing in Beijing's Great Hall of the People, Mr. Li said "there are no winners" in a trade war between the world's two largest economies, and appealed for calm.

People involved in the planning say the Trump administration is looking at making reciprocity the core of U.S. investment relations with China, meaning that the U.S. would impose restrictions on Chinese investment similar to those that U.S. firms face in China. That could mean that the U.S. would insist that Chinese firms form joint ventures before doing business in the U.S., unless China dropped those restrictions.

The U.S. has already made it more difficult for Chinese companies to invest in the U.S. by blocking Chinese bids to purchase U.S. semiconductor firms. That is done by an interagency review of foreign acquisitions by the Committee on Foreign Investment in the U.S. Congress is looking to broaden CFIUS reviews of acquisitions so they include joint ventures too.

AMERICAN OVERSIGHT

EXT-18-783-F-002680

ED_001863D_00000161-00010

The expansion would include reviews of technology transfers to foreigners and could apply to joint ventures both outside and within the U.S. But CFIUS looks solely at national security concerns. The administration wants to address economic harm as well, according to these people.

Any imposition of tariffs, without going first to the World Trade Organization, is sure to prompt a chorus of criticism not just from Beijing but from U.S. industry, which has opposed tariffs as counterproductive. The WTO adjudicates trade cases and has the power to authorize tariffs in cases where a losing party doesn't change its practices. The administration is also considering bringing a case against Chinese trade practices that are covered by the WTO.

Oregon Sen. Ron Wyden, the senior Democrat on the Senate Finance Committee, said he opposes the broad imposition of tariffs. "American producers who haven't gotten a fair shake in the past aren't going to get that back by just have tariffs slapped on imports indiscriminately," he said.

Tariffs are bound to cause China to retaliate, said Clement Leung, Hong Kong's representative in the U.S. Chinese officials "cannot show any weakness" at a time when the country's leader, Xi Jinping, has just been confirmed for his second term, Mr. Leung said. Hong Kong, a trading center that operates somewhat independently from the rest of China, would be hurt by limits on trade.

Whatever the political blowback, Harvard law professor Mark Wu, a trade expert, says that the White House has authority to impose tariffs under section 301 of the Trade Act of 1974.

"In situations where the U.S. Trade Representative deems unfair trade practices to fall outside the scope of a WTO-covered agreement, then the statute permits the executive branch to take action directly without first seeking recourse through WTO dispute settlement" procedures, he said.

Frustration with Chinese trade practices has been building among both the governments and private sectors of the U.S., Japan and Europe. One reason the U.S. is considering a separate WTO case is to try to recruit allies to pressure China. But any move to impose tariffs could allow Beijing to portray itself as a victim. Coalition-building has become more complicated in the wake of a separate U.S. action to levy tariffs on steel and aluminum imports from allied nations.

For instance, finance ministers and central bankers from the Group of 20 countries, meeting in Buenos Aires on Tuesday, failed to reach any new agreement on shared principles when it comes to trade policies, as the split between the U.S. and other major economies deepened over the U.S.'s tariff policies.

The administration is considering recommendations from two other reports that would impose draconian investment restrictions on China. The U.S.-China Economic and Security Review Commission, a Congressional panel that takes a hard line on China, last year urged the administration to prohibit "the acquisition of U.S. assets by Chinese state-owned or state-controlled entities, including sovereign wealth funds."

A report for the Pentagon by its Defense Innovation Unit Experimental, which examines technology issues, has recommended that the Pentagon pursue a policy of "deterring Chinese technology transfer" by broadening CFIUS's mandate and strengthening export controls on technology to China.

China Investment Corp¸ Chinese sovereign-wealth fund which could get hit by sanctions, is putting together a fund targeting as much as $5 billion with Goldman Sachs Group Inc., aimed at investing in U.S. manufacturing and other sectors. CIC hopes the fund would pass muster with U.S. regulators, say those people familiar with the plans.

It is unclear how far the administration will go in pursuing these ideas. Blocking the acquisition of all purchases by Chinese state firms, for instance, would mean that Chinese state-owned airlines couldn't buy Boeing jets. Toughening

AMERICAN OVERSIGHT

export controls on, say, semiconductor production machinery could cede the market to Japanese vendors.

The administration's actions on China come on the heels of plans to levy tariffs on steel and aluminum imports. Japan, Korea and the European Union are scrambling to get exemptions from those levies, which are set to go into effect on Friday.

Subject: Morning Energy, presented by America's Pledge: Battle in the Bakken state? — Groups sue over EPA waiver exemptions — Deja vu on formaldehyde

By Kelsey Tamborrino | 05/30/2018 05:41 AM EDT

With help from Annie Snider and Ben Lefebvre

BATTLE IN THE BAKKEN STATE? As the election year kicks into high gear, President Donald Trump's friendly relationship with Democratic Sen. Heidi Heitkamp is worrying some within the Republican party, POLITICO's Alex Isenstadt and Burgess Everett report. Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator from the No. 2 oil-producing state, especially at a time when many in the GOP fear that the president's unpredictable style will undercut their midterm plans. Heitkamp, who is seeking reelection in a state where Trump won nearly two-thirds of the vote, has a friendly relationship with the president, even after Trump aggressively recruited Rep. Kevin Cramer — who advised his campaign on energy issues — to give up his House seat and enter that race, leaving some of Cramer's closest allies feeling snubbed.

In an interview, Cramer said there would soon be "clarity" on who Trump supports in the race. But the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator, Alex and Burgess report. Trump has asked Cramer if he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said. "Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

For her part, Heitkamp said she's proud of her ability to work with the president. "I have a friendly relationship, I have a very important working relationship," she said in an interview, "not just with him but other members of the administration." Read the story here.

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and Peter Robertson of the Pebble Partnership was the first to correctly identify California and Ohio as the two states that don't have an avenue named after them in D.C. Instead, there's a California Street and Ohio Drive. For today: Which president was the first to see a major league baseball game in his hometown, and which town was it? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

Register for the Pro Summit: Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. Learn more.

GROUPS SUE ON WAIVER EXEMPTIONS: Ethanol and farm groups say they've filed a

AMERICAN OVERSIGHT

lawsuit against EPA over some of the waivers granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels, Pro's Eric Wolff reports. The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods Cross, Utah. Those refineries have collectively saved $170 million in compliance costs, the coalition said.

Those waivers, which ethanol backers say violate the volume mandates under the RFS, are also the subject of some horse-trading in the discussions between EPA Administrator Scott Pruitt and USDA Secretary Sonny Perdue. The two are trying to put the final touches on a compromise deal over EPA's rules for biofuels. Read more.

CHEVRON SHAREHOLDERS VOTE: Shareholders at Chevron's annual meeting today will vote on a pair of climate change-related provisions. First up is a proposal that the oil giant report to investors how it will change its business model to account for any decreased demand for oil and gas resulting from greater development of renewable energy sources. Another proposal is that Chevron start providing reports on steps it is taking to minimize methane emissions from its fracking operations. Chevron's board of directors have advised against both proposals, saying the company is already making sufficient efforts on both matters.

Exxon, which also holds its annual meeting today, is getting a break this year from the sort of environmental proposals its shareholders considered in 2017.

** **A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: https://politi.co/2koAHZb **

DEJA VU? Already under fire for their handling of a controversial assessment of nonstick chemicals in drinking water, a newly uncovered EPA email suggests that public relations strategy was also front-of-mind for EPA staffers as the agency contemplated reevaluating the risks of formaldehyde. Reuters reported last week that EPA delayed release of a new assessment of the chemical that is expected to for the first time link formaldehyde with leukemia after meeting with the American Chemistry Council in January.

"They reiterated the concern you have raised about information leaking before it's been vetted and asked that the Agency have appropriate communication materials ready to use if needed," Jennifer Orme-Zavaleta, who heads EPA's Office of Research and Development, wrote in a Jan. 24 email to EPA chief of staff Ryan Jackson and Richard Yamada, deputy assistant administrator for research and development. The email was released to the Union of Concerned Scientists under the Freedom of Information Act.

Yogin Kothari, a lobbyist of UCS, said the email "sounds eerily similar" to concerns that EPA and White House officials expressed about a HHS assessment of the chemicals PFOA and PFOS. "It's not surprising that the ACC is attempting to wield its influence over EPA when its former

AMERICAN OVERSIGHT

staff are basically running the place," Kothari said by email.

WE'RE CLOSED: The Environmental Council of the States' upcoming fall meeting will close to the public certain sessions attended by EPA officials, according to the group's draft agenda for the August meeting. The draft shows ECOS will hold closed sessions on several issues, including a state-EPA roundtable on "cooperative federalism" and joint PFAS activities. (h/t E&E News' Sean Reilly)

NAFTA TALKS STILL STALLED: Recent NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks told Pro's Sabrina Rodriguez. Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources said. "Conversations have stalled entirely." Read more.

WE'LL ALWAYS HAVE PARIS: This week marks the one-year anniversary of Trump's decision to pull the U.S. out of the Paris climate agreement. The United States still technically remains in the 2015 pact for the next two-and-a-half years, but the action to implement it is playing out in the rest of the world. To mark the occasion, the World Resources Institute will host a discussion today on whether other nations have moved on since Trump's decision to exit the agreement. Among those participating is Todd Stern, the former State Department special envoy for climate change who helped seal the deal. In the lead-up to the event, WRI's Eliza Northrop laid out the seven signs of progress since Trump's announcement here, including a timeline of events over the last year. If you go: The discussion kicks off at 2:30 p.m at 10 G Street NW. Watch the livestream here.

— **And the National League of Cities**, as well as mayors from across the country, will release today their latest "State of the Cities" report that will look into the trend of cities taking on clean energy goals, despite the federal government.

OFFSHORE DRILLER FINED $4M: Oil and gas company Energy Resource Technology was fined $4 million Tuesday by the U.S. Attorney's Office for the Eastern District of Louisiana for fabricating data about the readiness of a key piece equipment used to prevent oil spills, Interior said. The fine comes as a result of an investigation by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result, Pro's Ben Lefebvre reports. Read more.

EPA, KILDEE SPAR OVER SUMMIT: EPA defended its move to only allow federal agency and state representatives on the second day of last week's summit on toxic chemicals in drinking water, dismissing Democratic Rep. Dan Kildee's complaint that members of his staff had been barred from attending as a mischaracterization. EPA Associate Administrator Troy Lyons wrote in a letter Tuesday to Kildee and obtained by POLITICO that the agency worked with Kildee's office ahead of time to allow a staffer to attend the first day of the summit.

"I trust you understand our disappointment when we discovered that no one from your office

AMERICAN OVERSIGHT

attended the summit on May 22, particularly in light of the subsequent events on May 23," Lyons wrote. In a statement, Mitchell Rivard, Kildee's chief of staff, said that "it is hard to mischaracterize the EPA's actions — it had been widely reported that the EPA blocked both journalists and a congressional office from the taxpayer-funded PFAS summit." Read the letter here.

MAIL CALL! 45Q AND YOU: Rep. Cramer shared a letter Tuesday from the Treasury Department in response to his request for direction on the expanded 45Q tax credit for capturing and storing carbon dioxide. In the letter, Assistant Secretary for Legislative Affairs Drew Maloney said Treasury is developing published guidance to provide clarity to taxpayers for the purpose of using the credit.

— **A coalition of 12 state and city attorneys general** and attorneys sent a letter to National Academy of Sciences President Marcia McNutt saying EPA's so-called secret science proposal to ban the use of studies that don't publicly disclose all data is "too vague and rushed to allow for meaningful public review." And they pressed for the group to weigh in, saying "the National Academy's input on this extremely consequential proposal." Read it here.

API WRITES TO TRUMP ON SECTION 232: The American Petroleum Institute sent a letter to Trump last week requesting that the list of countries currently exempt from Section 232 tariffs on steel and aluminum be expanded "without imposing alternative measures such as quotas," and that the president remove any associated import quotas that have already been imposed. In his letter, API President and CEO Jack Gerard writes that additional import restrictions "will have a negative effect on our industry just as we have achieved the highest level of domestic hydrocarbon (oil and natural gas and natural gas liquids, or NGLs) production since 1949," according to EIA.

TRUDEAU COMMENTS ON PIPELINE: Canadian Prime Minister Justin Trudeau defended the Canadian government's plan to buy and complete the expansion of Kinder Morgan's Trans Mountain pipeline. "The project became too risky for a commercial entity to go forward with it; that's what Kinder Morgan told us," Trudeau said during a Bloomberg Businessweek event. "We are going to ensure that it gets built so that we can get our resources to new markets." More here.

WHITE HOUSE TALKS PUERTO RICO: Aboard an Air Force One flight, press secretary Sarah Huckabee Sanders was asked whether the president — despite his previous comments — now thinks Puerto Rico constitutes a "real catastrophe" following the release of a Harvard University study that found at least 4,645 people died from the September 2017 storm rather than the 64 deaths federal authorities counted. The White House continues to be supportive of the governor of Puerto Rico, Sanders said according to pool reports, and of "transparency and accountability." The people of Puerto Rico "deserve nothing less than that, and were going to continue to be focused on helping in every way we can," she said. "FEMA has already done the largest response ever in history to any natural disaster. They're in Puerto Rico, and we're going to continue to give as much assistance as possible."

RBS COMMITS TO NEW ENERGY FINANCING: Ahead of its shareholder meeting today, the Royal Bank of Scotland announced Tuesday new energy financing policies to support a

AMERICAN OVERSIGHT

transition to low carbon. The bank said it would no longer provide "project-specific finance" to new coal-fired power plants, thermal coal mines or oil sands projects, among other projects. Additionally, RBS said it is tightening restrictions on general lending to mining and power companies generating more than 40 percent of their revenues from thermal coal and of electricity from coal, respectively. In response, Rainforest Action Network Executive Director Lindsey Allen said the announcement "comes as a result of groups like us pressuring banks to defund fossil fuels and deforestation," but said the "policy is only half a step forward because it leaves loopholes in place."

REPORT: COOK TAPPED FOR SUPERFUND JOB: EPA has named Steven Cook — a former senior counsel at chemical giant LyondellBasell — to the agency's Superfund Task Force in the position left vacant by Albert "Kell" Kelly, Bloomberg BNA reported. Cook has been serving as deputy assistant administrator for the agency's land and waste office, prior to his move to the Superfund spot.

ZINKE DEFENDS 'KONICHIWA' GREETING: In a wide-ranging radio interview with Breitbart Radio, Interior Secretary Ryan Zinke defended his use of the greeting "konichiwa" in response to a question from Rep. Colleen Hanabusa on preserving internment sites during a March Natural Resources hearing. "I grew up in a little logging, timber town, railroad town in Montana and a lot of my family lived through the years of the internment camps. I've long since had friends that were Japanese families that went through that," Zinke said, calling it an "appropriate salute." Listen to the full interview here.

AD WARS: Club for Growth Action said Tuesday that it would spend $250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana. Campaign Pro's James Arkin reports the new ad campaign attacks Fagg over his record during his two decades as a district judge, including the time he called a judge who "undercut" Trump's rollback of environmental rules a "thoughtful moderate." Watch the TV ad here.

MOVER, SHAKER: Stuart Siffring joined the Western Energy Alliance as a regulatory analyst, the trade group announced Tuesday. Siffring previously worked as a permit engineer at EPA and the Colorado Department of Public Health and Environment.

Stories from POLITICO Pro

The one Democrat Trump can't help but like Back

By Alex Isenstadt and Burgess Everett | 05/30/2018 05:08 AM EDT

When a small group of alarmed White House aides caught wind that Sen. Heidi Heitkamp — one of the most endangered Democrats up for reelection in 2018 — would be attending President Donald Trump's bill signing last week, they raced to stop it.

Word eventually reached Senate Majority Leader Mitch McConnell, who has made unseating

AMERICAN OVERSIGHT

Heitkamp a top priority. He opted not to intervene, and the invitation stood: As the president signed a banking deregulation bill into law before a national audience, Heitkamp was right next to him, the only Democrat in the room.

As the election year kicks into high gear, Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator. At a time when many in the GOP fear that the president's unpredictable style will undercut their best-laid midterm plans, the relationship has given Heitkamp — who is seeking reelection in a state where Trump won nearly two-thirds of the vote — fodder to portray herself as a presidential ally.

Her office keeps a running list of the dozen-plus meetings Heitkamp has had with Trump and his top advisers since the 2016 election. And the senator is fond of noting that she forged close ties with Trump's former top economist, Gary Cohn. The president met with Heitkamp in Trump Tower after the 2016 election to discuss a possible Cabinet position, asked her to join him on Air Force One, and invited her onstage to join him and her Republican opponent, Rep. Kevin Cramer, during an appearance in North Dakota.

"Everyone is saying, 'What's she doing up here?'" the president said at the September event to sell his tax reform plan, which Heitkamp eventually opposed. "But I'll tell you what. Good woman, and I think we'll have your support, I hope we'll have your support. And thank you very much, senator, thank you for coming up."

After last week's bill signing, Heitkamp's allies raced to capitalize. The North Dakota Democratic Party sent out a tweet with an image of Cramer looking on uncomfortably as the president stood next to Heitkamp.

"At a bill signing today, @HeidiHeitkamp got a shout out and all @kevincramer got was a photo op next to a chair," the state party boasted.

"We will see footage of this on every platform," said Doug Heye, a former top Republican National Committee official. "It's a huge gift for her campaign."

Trump aggressively recruited Cramer to give up his House seat to take on Heitkamp, and his actions since have left some of Cramer's closest allies feeling snubbed. They note that while Trump has savaged Democratic incumbents Joe Donnelly of Indiana and Jon Tester of Montana and visited a growing list of states to pump up Republican Senate hopefuls — most recently Tennessee, where he appeared Tuesday on behalf of Rep. Marsha Blackburn — he has yet to make a campaign appearance with Cramer. Nor has the attack dog-in-chief attacked Heitkamp.

After Cramer learned last year that Heitkamp would be accompanying the president on Air Force One to North Dakota, he complained bitterly to the White House, according to two people with direct knowledge of the discussions. Heitkamp, Cramer predicted at the time, would try to use it to her political advantage. (A Cramer adviser, Pat Finken, denied that the congressman had complained about the senator riding on Air Force One.)

The administration has taken steps to assure Cramer that he has the president's full support. The

AMERICAN OVERSIGHT

congressman has been regularly in touch with White House political director Bill Stepien, and the two met earlier this month. Trump has agreed to hold a rally for Cramer later this year.

In an interview, Cramer shrugged off Heitkamp's attendance at the bill signing and said there would soon be "clarity" on who Trump supports in the race.

Yet the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator. Trump has asked Cramer whether he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said.

"Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

Heitkamp said she's proud of her ability to work with the president.

"I have a friendly relationship. I have a very important working relationship," she said in an interview, "not just with him but other members of the administration."

Trump's reluctance to go after Heitkamp stems in part from the simple fact that he needs her vote. With Republicans clinging to a narrow Senate majority, the White House has pushed for her support on several contentious votes, including the recent confirmations of CIA Director Gina Haspel and Secretary of State Mike Pompeo. She also backed Trump's nominations of Supreme Court Justice Neil Gorsuch and Environmental Protection Agency Administrator Scott Pruitt.

Last week's signing ceremony was organized by White House Office of Legislative Affairs Director Marc Short. He said he extended an invitation to Heitkamp because she played a central role in passing the banking deregulation law.

"She was an original cosponsor of the bill," Short said. "But she's also someone who opposed tax relief, who opposed repeal of Obamacare, and someone who will always support Chuck Schumer. So you can be sure the president will be actively campaigning in North Dakota this cycle."

Cramer's February entry into the race followed an intense pursuit from Trump and top White House officials. After Cramer initially said in January that he wouldn't run for Senate, he received overtures from Trump, White House counselor Kellyanne Conway, and energy executive and Trump donor Harold Hamm within a three-day period. Trump also met with Cramer's wife, Kris.

Cramer said Trump told him at the time that he'll "be out there campaigning more than you are." Trump's entreaties, Republicans contend, helped to push Cramer into the contest. Cramer won his statewide, at-large House seat in 2012, the same year Heitkamp entered the Senate.

AMERICAN OVERSIGHT

"The president leaned on him very hard. The president wanted the best candidate, and everyone in the state thought Kevin was the best candidate to beat Heidi," said Gary Emineth, a former North Dakota GOP chairman who is close with the congressman. "You know how the president is. He just doesn't quit."

Heitkamp predicted that Trump would attack her eventually. While she has maintained a positive working relationship with the president, she said it pales in comparison to Cramer's staunch loyalty.

"I don't think anyone can match his Trump credentials," Heitkamp said. "He is somebody who will always do what the president asks him to do, regardless of whether it's good for North Dakota."

As of late, the senator has been airing commercials that highlight her balancing act. "When I agree with the president I vote with him — and that's over half my votes," she says in a spot that began airing this month. "And if his policies hurt North Dakota, he knows I'll speak up."

Cramer accused Heitkamp of acting like a "Republican wannabe" with her occasional support for key Trump nominees.

"Her trying to cozy up to Donald Trump has resulted in good votes," Cramer said. "But every time she tries to become more like me, it's more flattering to me than it is to her."

Democrats, however, couldn't be happier to portray Cramer as a jilted lover.

Last week, the North Dakota Democratic Party released a video featuring a montage of clips of the president praising Heitkamp and shaking her hand as Cramer looks on — set to the sad sounds of R.E.M.'s "Everybody Hurts."

Ethanol, farm groups sue EPA over exemptions Back

By Eric Wolff | 05/29/2018 07:13 PM EDT

A coalition of ethanol and farmers groups said they filed a lawsuit in federal court today against EPA seeking to overturn some of the waivers the agency has granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels.

The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods

AMERICAN OVERSIGHT

Cross, Utah. Those refineries have collectively saved $170 million in compliance costs, the coalition said.

The groups, along with their allies in Congress, have criticized EPA's frequent use of the waivers, which they say undermines the RFS mandates on the amount of biofuel that must be sold into the U.S. fuel market.

"EPA is trying to undermine the RFS program under the cover of night," RFA CEO Bob Dinneen said in a statement. "And there's a reason it has been done in secret — it's because EPA is acting in contravention of the statute and its own regulations, methodically destroying the demand for renewable fuels."

The Advanced Biofuels Association challenged the waivers May 1.

WHAT'S NEXT: The complaint will be heard in the U.S. Court of Appeals for the 10th Circuit.

Exxon shareholders win vote to build Paris climate pact into plans Back

By Ben Lefebvre | 05/31/2017 02:37 PM EDT

The Trump administration may be preparing to withdraw the U.S. from the Paris climate change accords, but shareholders at Exxon Mobil and at least one other U.S. oil company are demanding the companies incorporate the international deal in their business models.

Nearly two-thirds of Exxon's shareholders backed a proposal on Wednesday calling for the company to assess how climate change and global efforts to limit temperature increases will affect its business. The vote is non-binding, but the results show that the once-fringe idea of linking climate change to big oil's operations has gained momentum.

The vote at the Exxon annual shareholder meeting in Dallas came after investors in its smaller rival Occidental Petroleum earlier this month cast more than two-thirds of their votes for a measure calling for the company to assess how its business would be affected by the Paris climate change accord's target of holding global warming to 2-degrees. Company credit rating agency Moody's said last year it would start to use the Paris pledge to assess financial risk for corporations.

"Shareholders have spoken clearly on climate," said Danielle Fugere, president and chief counsel for As You Sow, a group that helps shareholders introduce environmental proposals. "If there's less demand for oil and the world is awash in oil, there's going to be more competition among these companies. Shareholders are trying to figure out who is the best bet."

AMERICAN OVERSIGHT

Not all of these climate-related investor proposals succeeded, however. Chevron shareholders Wednesday morning rejected a motion that the company issue a report on how limiting global temperature increase to 2 degrees Celsius (3.6 degrees Fahrenheit) would affect its business. Only 27 percent of voting shareholders approved the proposal, down from more than 40 percent who voted for a similar proposal last year.

Exxon, Chevron and other energy companies facing such proposals argue that they are already taking the Paris agreement seriously and incorporating it into their business plans. Exxon in particular pointed out that it was developing technology that would capture the carbon emitted at natural gas power plans and then either store it or use it to produce more electricity.

"We believe the goal of carbon policy is to reduce emissions at the lowest cost to society," Exxon Chief Executive Darren Woods said at the shareholder meeting. "These goals led us to support the Paris Agreement." Woods sent President Donald Trump a letter earlier this month urging the U.S. to stay in the Paris deal.

For Exxon, the votes also illustrate how entangled the company has become in New York state climate change politics. The climate change proposal shareholders approved was partly sponsored by the New York State Common Retirement Fund, which is run by the State's comptroller. Meanwhile, the company is embroiled in a lawsuit with the New York and Massachusetts attorneys general over whether it withheld its own research on climate change from shareholders.

"The burden is now on Exxon Mobil to respond swiftly and demonstrate that it takes shareholder concerns about climate risk seriously," New York State Comptroller Thomas P. DiNapoli said in a prepared statement after the vote.

NAFTA talks stall amid apparent refusal of U.S. to make concessions Back

By Sabrina Rodriguez | 05/29/2018 07:41 PM EDT

Recent high-level NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks said on Tuesday.

Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources told POLITICO. "Conversations have stalled entirely."

As the U.S. and Canada resumed talks in Washington on Tuesday, the sources confirmed that Mexican Trade Undersecretary Juan Carlos Baker met with officials from USTR last week to

AMERICAN OVERSIGHT

present a counterproposal that would see Mexico make concessions on wages in the automotive sector in return for U.S. concessions on other flashpoint issues.

Under the offer, Mexico reportedly would accept language on automotive rules of origin that would require that 20 percent of cars produced within North America be made by workers earning at least $16 an hour.

In exchange, Mexico reportedly asked that the U.S. back off some of its thorniest proposals, like placing limits on government procurement as well as a so-called sunset clause, which would allow for the deal to be terminated if all three countries don't agree to renew it after five years. News of the counterproposal was first reported by Bloomberg.

Mexico's counterproposal was not well received by USTR, the sources said.

"USTR did not take a close look at their proposal before rejecting it," one of the sources said. "As soon as it included [the U.S.] giving in on something, it was a 'no' from USTR."

That leaves it up to U.S. Trade Representative Robert Lighthizer to decide if the U.S. will offer any concessions to Mexico and Canada, the sources added.

USTR did not immediately respond to a request for comment on Tuesday evening.

The latest deadlock comes as Mexico and Canada face a looming deadline in their effort to secure a permanent exemption from the U.S. steel and aluminum tariffs. Mexico and Canada were temporarily exempted from the duties, but to win a permanent reprieve each country must reach a separate agreement to satisfy U.S. national security concerns by June 1.

Mexican President Enrique Peña Nieto and Canadian Prime Minister Justin Trudeau have both emphasized in recent days that they will not be pressured into accepting a NAFTA deal that is bad for their respective countries.

"No NAFTA is better than a bad deal, and we've made that very clear to [President Donald Trump]," Trudeau said Tuesday in an interview with Bloomberg. "We are not going to move ahead just for the sake of moving ahead."

Trudeau discussed the NAFTA talks during a call with Vice President Mike Pence on Tuesday, the White House said in a readout that provided no details of the conversation.

Negotiators have made some gains, despite the continued difficulties over the hot-button topics. Canadian Foreign Minister Chrystia Freeland, Canada's top NAFTA official, said she had a "very substantive" conversation with her U.S. counterpart in Washington on Tuesday.

The NAFTA nations' top trade officials have been in consistent contact over the phone since they last met in Washington two weeks ago.

Lighthizer had acknowledged at that point that the three countries still faced "gaping

AMERICAN OVERSIGHT

differences" on a number of issues, such as market access for agricultural products and automotive rules of origin. "The NAFTA countries are nowhere near close to a deal," Lighthizer said then.

Talks have continued to move forward on the NAFTA modernization chapters, like e-commerce, "but as long as USTR keeps the thorny issues on the table, there won't be movement," one of the sources said.

Negotiators have so far closed nine chapters and six sectoral annexes, Mexico's chief negotiator, Kenneth Smith Ramos, said last week. Those chapters include: telecommunications, small- and medium-sized enterprises, competition, and technical barriers to trade.

Gulf of Mexico rig operator fined $4M after Interior Department investigation Back

By Ben Lefebvre | 05/29/2018 04:36 PM EDT

The U.S. Attorney's Office for the Eastern District of Louisiana fined offshore oil and gas company Energy Resource Technology $4 million for fabricating data about readiness of a key piece equipment used to prevent oil spills, the Interior Department said today.

The fine was a result of an investigation by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result. The failure by a blowout preventer was one of the main causes of Deepwater Horizon rig accident that killed 11 people in 2010.

An ERT supervisor on the same rig had employees perform welding near an active well in violation of Interior safety regulations.

Interior had fined ERT $4 million in 2012 for earlier violations on its rigs, and an accident killed a contract worker on an ERT rig in February.

ERT is a subsidiary of Houston-based Talos Energy.

WHAT'S NEXT: In addition to the fine, ERT was sentenced to 36 months' probation and ordered to pay $200,000 in restitution.

Study: 4,645 people died after Hurricane Maria, far more than official estimate Back

By Mel Leonor | 05/29/2018 11:40 AM EDT

At least 4,645 people died amid the devastation wrought by Hurricane Maria in Puerto Rico — more than 70 times the official government death toll of 64, according to a new study from Harvard University.

Locals, journalists and public health experts have for months questioned the government estimate of deaths from the storm, which caused more than $90 billion in damage.

President Donald Trump, however, said in October that Puerto Rico officials should be "very proud" of the low death toll.

The study, published Tuesday in the New England Journal of Medicine, is based on household surveys of more than 3,000 homes in the territory, where researchers found a boom in the mortality rate between late September and late December 2017.

The authors of the study, which was largely funded by the Harvard T.H. Chan School of Public Health, described the official death count as a "substantial underestimate" and called it evidence of the "inattention of the U.S. government to the frail infrastructure of Puerto Rico."

"The timely estimation of the death toll after a natural disaster is critical to defining the scale and severity of the crisis and to targeting interventions for recovery," they wrote.

Researchers found that "interruption of medical care was the primary cause" of the high mortality rate that came after the storm made landfall.

With the 2018 hurricane season in swing, the authors also urged chronically ill patients, communities and health care providers to develop contingency plans for future disasters.

Carlos R. Mercader, executive director of the Puerto Rico Federal Affairs Administration, said in a statement that officials would analyze the report, adding, "We have always expected the number to be higher than what was previously reported."

He said the Puerto Rico government has commissioned a report from George Washington University, which he said would be released "soon."

Trump said in October that the storm had been less devastating than Hurricane Katrina in 2005, but the new study indicates that may not be true. Hurricane Katrina resulted in the deaths of 1,833 people, according to FEMA.

"Every death is a horror," Trump said at the time, "but if you look at a real catastrophe like Katrina and you look at the tremendous — hundreds and hundreds of people that died — and you look at what happened here with, really, a storm that was just totally overpowering ... no one has ever seen anything like this."

AMERICAN OVERSIGHT

Rep. Nydia Velázquez (D-N.Y.) said after the report was released Tuesday that the apparent undercounting of deaths "concealed" the impact of Hurricane Maria on the territory.

"By obscuring this, many were left to believe the Trump Administration's mythology that Puerto Rico was not hit hard by Maria," Velázquez said in a statement. "We must get to the bottom of this discrepancy."

The White House did not respond to a request for comment.

Last year, Velázquez and Rep. Bennie Thompson (D-Miss.) asked a government watchdog to investigate how Puerto Rican officials "originally arrived at such a low number."

New Club for Growth ads attack Fagg in Montana Back

By James Arkin | 05/29/2018 03:48 PM EDT

Club for Growth Action, the super PAC arm of the Club for Growth, announced today that it would spend $250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana.

The Club is backing state auditor Matt Rosendale in the race in the race to face Democratic Sen. Jon Tester, and its PACs have spent more than $1 million on ads backing Rosendale and attacking Fagg, one of his top challengers in the June 5 primary.

The new ad campaign attacks Fagg over his record during his two decades as a district judge. The TV ad makes three claims against Fagg: that he defended another judge who suggested a rape victim was to blame for her own attack; that he called a judge who "undercut" President Donald Trump's rollback of environmental rules a "thoughtful moderate"; and that he "praised a liberal federal judge who ruled against speeding up deportations."

"Russ Fagg's values are not Montana values," the narrator says.

The radio version of the ad features a woman and a man having a conversation about Fagg's record and pointing listeners to a website, factsformontana.com, funded by Club for Growth Action.

You can watch the TV ad here and listen to the radio ad here.

Subject: POLITICO's Morning Energy: Pruitt watch: What comes next? — IG requests abound — GAO tells Congress to ban coal self-bonding

By Kelsey Tamborrino | 04/06/2018 10:00 AM EDT

With help from Alex Guillén and Daniel Lippman

WHAT COMES NEXT? EPA Administrator Scott Pruitt fared seemingly well Thursday, at least comparatively - appearing in no contentious interviews and receiving a fuller backing from the president. Of course, that could all change today. White House officials, conscious of how quickly Trump's mind can change about defending top advisers, have avoided publicly making any definitive statements about how long Pruitt will remain in his job, POLITICO's Eliana Johnson and Andrew Restuccia report.

RENT'S DUE: Eliana and Andrew also report the administrator was sometimes slow to pay the rent on his $50-per-night lease in Capitol Hill, according to two people with knowledge of the situation. Pruitt's lobbyist-turned-landlord had to pester him for payment, although it appears he eventually paid his back rent. More here.

STRONG FEELINGS: President Donald Trump praised Pruitt multiple times throughout Thursday, although he acknowledged that he would "have to look at" all of the reports on the EPA administrator. "He's been very courageous. It hasn't been easy, but I think he's done a fantastic job," Trump said of Pruitt. The president was returning from an event in West Virginia, where "they love Scott Pruitt," he said.

Meanwhile, Pruitt kept a low profile Thursday: The EPA chief headed to Kentucky, where he addressed members of the Association of Air Pollution Control Agencies on the agency's National Ambient Air Quality Standards attainment goal and the Trump administration's efforts to speed up the environmental permitting process. "EPA is making tremendous progress working with states and our co-regulators to improve air quality and provide regulatory certainty for local communities," Pruitt said in a statement released after the event.

And he may stay out of sight today too: Plans for a public event with Pruitt at the White House to announce changes to the air quality standards program today have apparently been shelved, but Trump still intends to sign an executive order on the subject, The Washington Post reports. Pruitt had said earlier this week that an announcement on the new policy was in the works, but EPA did not respond to ME's questions Thursday night.

DRIP, DRIP, DRIP: More Pruitt stories emerged Thursday, culminating in an explosive report from The New York Times that detailed how at least five EPA officials were reassigned or demoted, or requested new jobs, after raising concerns about Pruitt's spending habits and ability to manage. Pruitt at one point requested the use of emergency sirens to get him and his security detail through D.C. traffic, including at least one trip to French restaurant Le Diplomate, according to the Times. Read the full report here.

AMERICAN OVERSIGHT

Other Thursday headlines include:

- **Pruitt endorsed raises for two of his aides,** The Washington Post reports, though he left it to others to actually carry out the pay increases. Two EPA officials and one from the White House told the Post that Pruitt told subordinates to give the raises to senior counsel Sarah Greenwalt and Millan Hupp, his director of scheduling and advance, both of whom had worked for him in Oklahoma.

- **Even with the continued spray of scandals,** CNN reported Trump floated replacing Attorney General Jeff Sessions with Pruitt as recently as this week. "He was 100 percent still trying to protect Pruitt because Pruitt is his fill-in for Sessions," one source familiar with Trump's thinking told CNN.

- **The Department of Consumer and Regulatory Affairs** issued a citation to the owner of Pruitt's condo, due to lack of proper licensing to rent the unit. A NBC 4 Washington reporter tweeted the fine could hit $2,034.

THE $16,000 SEAT: That's about how much it cost for Pruitt to fly to Morocco last year, according to a new letter from the top Democrat on the House Oversight Committee, citing documents the panel received from EPA. Rep. Elijah Cummings said the documents showed "that Mr. Pruitt's seat cost $16,164," but were insufficient to determine the full costs for Pruitt and his aides on that and other trips. He asked Oversight Chairman Trey Gowdy to issue a subpoena for more. Read that letter here.

WHERE THE GOP STANDS: Republicans aren't going to give up a fight for Pruitt's permanence any time soon. A leadership aide tells POLITICO's Burgess Everett that the Senate won't be able to confirm a conservative EPA administrator if Pruitt is canned. That may contribute to the choir of GOP voices who are still standing firmly in the embattled EPA administrator's corner. Conservatives like Sens. Rand Paul and Ted Cruz vocalized their support on Twitter Thursday. "He's been an effective member of the President's team," Sen. Jim Inhofe said in a statement.

Still, a third Republican joined in calling on Pruitt to resign Thursday. "I fundamentally disagree with how Pruitt has handled the EPA," Rep. Elise Stefanik said at a town hall meeting.

HART WEIGHS IN: Energy lobbyist Steven Hart, whose wife Vicki co-owned the condo rented to Pruitt, expressed regret in a statement released to POLITICO. Hart said he was taking the matter "very seriously" and apologized to his wife, "whose fantastic career is being maligned unnecessarily." Hart also reiterated that the condo was not owned by his firm Williams & Jensen, its partners or any other employees of the firm. "[A]ny suggestion that Administrator Pruitt's short-term rental of one of its bedrooms in 2017 resulted in undue influence for the firm or its clients with business before the EPA is simply false," Hart said. "I am confident in these facts, and certain that all fair and impartial assessments of the matter will conclude accordingly."

WE MADE IT TO FRIDAY! I'm your host Kelsey Tamborrino. The Natural Resources

AMERICAN OVERSIGHT

Defense Council's Ed Chen was first to guess the first president to receive a Ph.D. was Woodrow Wilson, who got a one in political science from Johns Hopkins University. POLITICO Space is our new, free weekly briefing on the policies and personalities shaping the second space age in Washington and beyond. **Sign up today to start receiving the newsletter right at launch on April 6.** *Presented by Boeing.*

IG REQUESTS ABOUND: Democratic Sens. Tom Carper and Sheldon Whitehouse asked EPA's inspector general to expand an existing investigation into Pruitt's alleged use of a special hiring authority to give raises to two aides, Pro's Alex Guillén reports. Alex also confirmed earlier Wednesday that the IG is reviewing requests to investigate Pruitt's $50-a-night lease agreement - the first step before determining whether to launch a formal probe. Opposition research group American Bridge 21st Century added itself to the list Thursday, sending a letter to the IG requesting an investigation into Pruitt's rental.

- **Another new letter to the IG emerged Thursday** from Carper, who raised questions last week - before Pruitt's scandal saga hit fever-pitch - about Samantha Dravis' prior work experience. Specifically, Carper wrote he had been informed that Dravis "did not attend work or preform her duties for much if not all of the months of November 2017 - January 2018." Read it here.

AD-ING IT UP: American Bridge is also launching new digital ads focused on Pruitt's "corrupt spending." The ads will run on Twitter and will target those tweeting about Pruitt, directing them to their petition page.

202 AND YOU: The president promised a crowd in West Virginia Thursday he'd review the use of emergency authority to prop up coal and nuclear power plants, a provision referred to as Section 202c of the Federal Power Act. "We'll be looking at that 202. You know what a 202 is? We'll be looking at that," Trump said. "We're trying. Nine of your people just came up to me outside, 'Could you talk about 202?' We'll be looking at that as soon as we get back." The use of the provision has resurfaced after Ohio-based FirstEnergy Solutions submitted an unusual request to the Energy Department just before it filed for bankruptcy protection, asking that department to use its authority to provide four-year contracts to many coal and nuclear power plants in the PJM Interconnection. Read more here from Pro's Eric Wolff.

WIND POWERS ZINKE REMARKS: Interior Secretary Ryan Zinke will speak at noon today about U.S. offshore wind initiatives at the International Offshore Wind Partnering Forum in Princeton, N.J. Bureau of Ocean Energy Management's program manager of offshore renewable energy, James Bennett will speak at the forum earlier in the day about the agency's thoughts on offshore wind in the Atlantic. "We want the federal

AMERICAN OVERSIGHT

government to be our partners, and we are ready to work with Secretary Zinke, who recognizes offshore wind has become more valuable in terms of both environmental and economic benefits," said Liz Burdock, executive director of the Business Network for Offshore Wind, earlier this week.

GAO TELLS CONGRESS TO BAN COAL SELF-BONDING: Congress should pass a law barring coal companies from using "self-bonding" to ensure they will clean up old mine sites, according to a new report from the Government Accountability Office. Most coal-related financial assurances are done through surety bonds secured from other companies or by putting up collateral. But 12 percent of assurances in 2017, representing $1.2 billion, were done via self-bonding, in which a coal company essentially promises it has the money to cover clean-up costs, according to GAO's report.

Recent high-profile coal bankruptcies "have highlighted risks" that the Interior Department and the states face to be left holding the bag if coal companies go under without remediating their mines, GAO concluded. It's "a risk that may be greater today than when self-bonding was first authorized under" the Surface Mining Control and Reclamation Act of 1977, the agency added. Hardrock miners, the agency noted, were barred from self-bonding back in 2001.

MAIL CALL! Senate Energy and Natural Resources ranking member Maria Cantwell sent a letter Thursday to Zinke requesting he withdraw his park fee increase proposal. "I am unable to see how doubling or tripling a park entrance fee is anything other than an effort to exclude many Americans from enjoying their national parks," Cantwell wrote. The Associated Press reported earlier this week that the department was walking back the proposal after public outcry. Read Cantwell's letter here.

COME FOR THE CHERRY BLOSSOMS, STAY FOR THE OIL INFRASTRUCTURE? A 10-foot oil derrick and construction crew will be strategically placed on the National Mall today, to draw attention to potential drilling on public lands. The display comes via The Wilderness Society's "Too Wild to Drill" campaign. **If you go:** The display will be up on the Mall between 14th and 15th Streets from 10 a.m. to 4 p.m.

CfA SUES FOR TAR CREEK DOCS: The Campaign for Accountability filed a lawsuit against EPA on Thursday to force the agency to comply to a Freedom of Information Act request about a northeastern Oklahoma Superfund site. The lawsuit requests documents between officials at EPA and news organizations, including POLITICO, regarding the Tar Creek Superfund cleanup site. The site was the subject of a recent feature in POLITICO Magazine. Read the suit here.

- **The Renewable Fuels Association submitted FOIA requests** to EPA and DOE regarding waivers issued for small refineries from complying with the Renewable Fuel Standard. Read it here.

EPA News Highlights 2.13.18

The Washington Examiner: EPA Reaches $10 Million Settlement With Shell

Energy giant Shell agreed to install $10 million in emissions control equipment at a Louisiana chemical plant as part of a settlement Monday with the Environmental Protection Agency and Justice Department. EPA Administrator Scott Pruitt said the agreement demonstrates the agency's "dedication" to working with the states to pursue violations of federal clean air laws and bring violating companies into compliance. “This settlement will improve air quality for citizens of Louisiana by reducing emissions of harmful air pollution,” Pruitt said. The EPA, Justice Department and the Louisiana Department of Environmental Quality announced the settlement with Shell Chemical for emissions violations stemming from the company's chemical plant in Norco, La. The settlement will result in the elimination of more than 150 tons of excess emissions of harmful air pollutants. It resolves charges that Shell violated the Clean Air Act and state law by not properly operating flaring units to burn off excess gases. The settlement, in addition to making the $10 million in improvements, also fined the company civil penalties totaling $350,000, including $87,500 to state regulators.

E&E News: Trump Wants To End EPA Dredge□And□Fill Permitting, Vetoes

The Trump administration wants to eliminate U.S. EPA authority over dredging and filling the nation's wetlands and waterways. The proposal — which would require congressional approval — was included in the Trump administration's infrastructure plan released today. The plan would give the Army Corps of Engineers complete authority over the Clean Water Act Section 404 program, taking EPA out of the process. The administration also wants to eliminate EPA's 404(c) veto power over permits it disagrees with. The proposal would mean the Army Corps would be solely responsible for reviewing project proposals and permitting them.

AMERICAN OVERSIGHT

Milwaukee Journal Sentinel: No. 2 Wisconsin DNR official joins Cathy Stepp at regional office of the EPA in Chicago

A second top state official at the Wisconsin Department of Natural Resources is moving to the U.S. Environmental Protection Agency's regional office in Chicago — an agency that oversees federal regulatory issues in the Midwest, including Wisconsin. Kurt Thiede, deputy secretary of the DNR, is joining the EPA as chief of staff for Cathy Stepp, the recently appointed regional administrator of the environmental enforcement agency. Thiede was appointed deputy DNR secretary in March 2015 by Republican Gov. Scott Walker and has worked at the state agency since 1999 in a variety of positions. He told fellow employees in a memo Monday that one of his goals had been to change the perception that the DNR was a regulatory agency to be feared. The move of Stepp and now Thiede to the EPA comes at a time when Foxconn Technology Group has started to submit environmental permit applications to the DNR for a massive industrial complex in Racine County.

Oklahoma Energy Today: EPA Disagrees With Auditor Jones Over Tar Creek Trust

Oklahoma State Auditor and Inspector Gary Jones apparently has a different opinion about the way contracts were handled by the Trust created to handle the relocation of homes and businesses at the Tar Creek Superfund site. He thinks there might have been criminal wrongdoing. But the Tulsa World reported over the weekend that a federal investigator concluded otherwise. The paper said a 2013 report by the Environmental Protection Agency's Office of Inspector General claimed there were no irregularities or violations of law concerning the handling of the bids and contracts at Tar Creek in northeast Oklahoma. The paper quoted the investigator from the report. "Extensive record reviews and interviews were conducted and did not disclose evidence to support the allegations," Special Agent Susan Chandler wrote in the OIG report. The OIG report was initially obtained by a member of the Lead-Impacted Communities Relocation Assistance Trust in 2014.

Bloomberg BNA: Water Infrastructure Among Few EPA Winners In Trump Budget Plan

Water infrastructure funding would be essentially shielded from the deep cuts the Trump administration is seeking in Environmental Protection Agency funding in fiscal 2019, even as the president seeks to eliminate or greatly reduce regional water quality programs. The president's budget request released Feb. 12 would provide $6.15 billion to the EPA for the fiscal year that begins Oct. 1, a reduction of about 25 percent from the fiscal 2017 enacted levels. A proposed cut that deep is expected to encounter resistance from Senate Democrats and even some Republicans. At the same time, the proposed budget would maintain funding levels for EPA-funded water infrastructure projects. Overall, the EPA's two largest water funds, which provide money to states for infrastructure loans, would receive almost $2.3 billion in fiscal 2019.

AMERICAN OVERSIGHT

National News Highlights 2.13.18

The Wall Street Journal: Shale Output Hasn't Grown This Fast Since Oil Was At $100

U.S. shale companies are churning out crude oil at a record pace that could overwhelm global demand and reverse the oil market's fragile recovery, a top energy-market observer said Tuesday. U.S. shale production is growing faster in 2018 than it did even during the boom years of $100 a barrel oil prices from 2011 to 2014, said the International Energy Agency in its closely watched monthly report. The difference this time: Oil prices are about 40% lower. The situation is "reminiscent of the first wave of U.S. shale growth," when a flood of American oil built up a global glut that sent prices crashing over four years ago, said the Paris-based IEA, which advises governments and corporations on energy trends. Oil prices fell after the report's release in Europe before recovering somewhat. Brent, the international benchmark was down 0.06% at $62.55 while U.S. prices were down 0.27% at $59.13.

Bloomberg: Americans Expect Biggest Pay Jump In Years

Americans are more optimistic about wage growth than they have been in years. U.S. consumers anticipate earnings will rise 2.73 percent in the coming year, the most since data collection began in 2013, according to the results of a New York Fed survey released Monday and conducted last month. January was only the third month in the survey's 56-month history in which expected wage growth topped expected consumer price inflation, which fell slightly, to 2.71 percent.

The Wall Street Journal: Trump's Big Public Works Dig

The real earth-moving parts of Mr. Trump's plan are the regulatory reforms, some of which will need to be fleshed out. The President wants to establish "one agency, one decision" for environmental reviews that would avoid regulatory hop-scotch. Good idea. Mr. Trump also suggests reducing environmental reviews to two years that can now drag out for a decade. Even many Democrats would like to expedite their favorite projects that have been grounded due to the discovery of a tiger salamander or other endangered species. Another idea with merit is delegating environmental review and permitting decisions to states. California has been assigned these responsibilities under agreements with the Federal Highway Administration, as have Texas, Florida and Ohio. According to Gov. Brown, California has reduced the approval process from the "notice of intent to final environmental impact statement" on highway projects on average by 10 years. Tucked into the plan is modest flexibility on Buy America requirements and Davis-Bacon, which requires contractors on federal projects to pay workers prevailing wages set by unions. These raise construction costs. While this flexibility is commendable, Mr. Trump's plan will also require tens of thousands of more workers. The Associated General

AMERICAN OVERSIGHT

Contractors of America reported last month that 78% of contractors had a hard time hiring. Apprenticeships can make up some of the shortage, but the government will need to increase H-2B visas to avoid delays or exorbitant project costs. Democrats are ripping the President's plan, and no doubt many think they can get more money if they win control of Congress in November. But they shouldn't be so sure. President Trump deserves credit for opening a debate in Congress about why merely spending more on public works won't help the public.

TRUMP TWEETS

Trump Wants To End EPA Dredge□And□Fill Permitting, Vetoes

By Ariel Wittenberg, 2/12/18

The Trump administration wants to eliminate U.S. EPA authority over dredging and filling the nation's wetlands and waterways.

The proposal — which would require congressional approval — was included in the Trump administration's infrastructure plan released today.

The plan would give the Army Corps of Engineers complete authority over the Clean Water Act Section 404 program, taking EPA out of the process.

The administration also wants to eliminate EPA's 404(c) veto power over permits it disagrees with.

AMERICAN OVERSIGHT

The proposal would mean the Army Corps would be solely responsible for reviewing project proposals and permitting them.

While EPA and the Army Corps would continue working on current efforts to rewrite regulations defining which wetlands and small waterways are subject to the Clean Water Act, the administration apparently wants EPA's authority to end there.

Not only would the Army Corps be the only agency to issue jurisdictional determinations about whether specific projects need permits for dredging and filling, the administration also wants to "eliminate duplicative oversight" by removing EPA's veto authority over Army Corps 404 permits.

"The threat of the veto creates significant uncertainty and delays permit decisions," the proposal says. "Removing EPA's authority to veto a 404 permit would make the permitting process more efficient and predictable."

That could have major ramifications for projects nationwide, especially the Pebble mine project in southwestern Alaska.

Last month, U.S. EPA Administrator Scott Pruitt unexpectedly withdrew his attempt to quash proposed pre-emptive restrictions on the controversial mine project (Greenwire, Jan. 30).

Today's proposal would render that meaningless by eliminating 404(c) altogether, leaving Pebble's critics with only EPA's science showing "significant and irreversible harm."

EPA and Army Corps' joint administration of dredging and filling permits dates back to the Clean Water Act's 1972 passage. A deal between the House and Senate during CWA negotiations maintained the Army Corps' traditional authority over dredging and filling as EPA became responsible for water pollution from those projects (Greenwire, June 29, 2017).

AMERICAN OVERSIGHT

The agencies agreed in 1979 that while the Army Corps would be the primary permit administrator, EPA would have the final say. In 1992, the agencies signed another agreement that they would jointly participate in a dual review.

The administration's proposal follows requests from energy companies this fall that EPA be eliminated from 404 permitting.

"Unfortunately, the extreme difference in opinions and backgrounds between the agencies has created a significant disruption in their coordination and program administration," coal company Murray Energy Corp. wrote to the Army Corps in October. "Each agency is struggling to manage the program as they see fit creating an uncertainty and unclear path of progression for the applicants."

The comments were in response to the Army Corps' requests for comments on 30 regulations that "might be appropriate for repeal, replacement or modification" (Greenwire, Oct. 20, 2017).

The Waters Advocacy Coalition, which comprises more than 60 industry groups, also asked the Army Corps to withdraw from both the 1979 and 1992 agreements.

The 1979 agreement, the coalition wrote, "allows EPA to delay and/or second-guess the Corps expertise."

That position is also supported by several construction and farming groups.

"Recognizing the Corps' authority over its own 404 program would promote consistency and certainty, as permit holders could rely on a jurisdictional determination or 404 permit issued by the Corps without having to wonder if EPA will insert itself into the decision making process and undermine the Corps' positions," the National Association of Home Builders wrote.

Milwaukee Journal Sentinel

https://www.jsonline.com/story/news/politics/2018/02/12/no-2-wisconsin-dnr-official-joins-cathy-stepp-regional-office-epa-chicago/330657002/

No. 2 Wisconsin DNR official joins Cathy Stepp at regional office of the EPA in Chicago

By Lee Bergquist, 2/12/18

A second top state official at the Wisconsin Department of Natural Resources is moving to the U.S. Environmental Protection Agency's regional office in Chicago — an agency that oversees federal regulatory issues in the Midwest, including Wisconsin.

Kurt Thiede, deputy secretary of the DNR, is joining the EPA as chief of staff for Cathy Stepp, the recently appointed regional administrator of the environmental enforcement agency.

Thiede was appointed deputy DNR secretary in March 2015 by Republican Gov. Scott Walker and has worked at the state agency since 1999 in a variety of positions. He told fellow employees in a memo Monday that one of his goals had been to change the perception that the DNR was a regulatory agency to be feared.

The move of Stepp and now Thiede to the EPA comes at a time when Foxconn Technology Group has started to submit environmental permit applications to the DNR for a massive industrial complex in Racine County.

The Foxconn project is likely to require some federal environmental reviews or oversight.

Foxconn is planning to construct a $10 billion flat-screen plant in Mount Pleasant. The Taiwan company has already won exemptions from some state environmental rules as part of a state financial incentive package.

AMERICAN OVERSIGHT

The EPA said earlier this month that Stepp has stepped aside from involvement in two ongoing regulatory cases in Wisconsin because of previous ties when she was at the DNR.

Those two cases involve pollution problems at barrel refurbishing plants in St. Francis, Milwaukee and Oak Creek and a longstanding EPA review of the DNR's water regulation program.

Asked if Stepp would recuse herself in other cases, an EPA spokeswoman told the Milwaukee Journal Sentinel on Feb. 6 that Stepp is "consulting with EPA ethics officials to determine which, if any, additional matters she should recuse herself from." The spokeswoman said Monday she had no additional details.

As for Thiede, the spokeswoman said, "Mr. Thiede will consult with EPA ethics officials to determine which matters he should recuse himself from."

Under the Walker administration, Thiede has played an influential role as an experienced agency insider in a department whose top managers mostly came from the outside.

In a memo to DNR employees on Monday, Thiede said:

"When I started to take on leadership roles at the agency I wanted to make sure we began to change the narrative that the DNR was something to be feared, avoided, or maligned.

"I wanted the agency to be viewed as a partner, a resource, and I feel like we have made great strides in this area. I understand that by the nature of our work we can't make everyone happy all the time, but we can change perceptions and make sure that any experience with the agency is professional, respectful and enlightening."

Stepp, a Republican and former builder and state senator from Racine County, oversaw all

AMERICAN OVERSIGHT

environmental regulations in Wisconsin as secretary from 2011 until August.

She left the DNR in August for a post in the Trump administration in the Kansas City office of the EPA. On Dec. 19, she was appointed to head up the Midwest regional office in Chicago.

The regional office oversees Wisconsin, Indiana, Illinois, Michigan, Minnesota and Ohio.

In Madison, DNR Secretary Dan Meyer said Ed Eberle, the assistant deputy secretary, will become the No. 2 official in the agency.

In another move, Pat Stevens, administrator of the environmental management division of the DNR, will become assistant deputy secretary.

Oklahoma Energy Today

http://www.okenergytoday.com/2018/02/epa-disagrees-with-auditor-jones-over-tar-creek-trust/

EPA Disagrees With Auditor Jones Over Tar Creek Trust

By Jerry Bohnen, 2/12/18

Oklahoma State Auditor and Inspector Gary Jones apparently has a different opinion about the way contracts were handled by the Trust created to handle the relocation of homes and businesses at the Tar Creek Superfund site.

He thinks there might have been criminal wrongdoing. But the Tulsa World reported over the weekend that a federal investigator concluded otherwise. The paper said a 2013 report by the Environmental Protection Agency's Office of Inspector General claimed there were no irregularities or violations of law concerning the handling of the bids and contracts at Tar Creek in northeast Oklahoma.

AMERICAN OVERSIGHT

The paper quoted the investigator from the report.

"Extensive record reviews and interviews were conducted and did not disclose evidence to support the allegations," Special Agent Susan Chandler wrote in the OIG report.

The OIG report was initially obtained by a member of the Lead-Impacted Communities Relocation Assistance Trust in 2014.

The investigation and conclusions drawn by the State Auditor were submitted to then-Attorney General Scott Pruitt who chose not to release the report. Current Attorney General Mike Hunter agreed also not to release it.

Jones still contends his report should be released to the public.

"If the attorney general thinks the auditor and inspector's office did shoddy work, I'd think he'd want the public to see it," Jones told the paper last week.

The OIG report lists 15 allegations against LICRAT and project engineer Jack Dalrymple. The World reported they deal with claims that Dalrymple and perhaps trust members conspired to rig the bidding process on a $3 million contract to remove and dispose of abandoned buildings and otherwise rehabilitate the Tar Creek site.

Dalrymple told the newspaper he thinks the Auditor and Inspector's report should be made public and he's not afraid of its release, adding, "I can tell you every single person on that trust was honest and true."

AMERICAN OVERSIGHT

Water Infrastructure Among Few EPA Winners In Trump Budget Plan

By Dean Scott, 2/12/18

Water infrastructure funding would be essentially shielded from the deep cuts the Trump administration is seeking in Environmental Protection Agency funding in fiscal 2019, even as the president seeks to eliminate or greatly reduce regional water quality programs.

The president's budget request released Feb. 12 would provide $6.15 billion to the EPA for the fiscal year that begins Oct. 1, a reduction of about 25 percent from the fiscal 2017 enacted levels. A proposed cut that deep is expected to encounter resistance from Senate Democrats and even some Republicans.

At the same time, the proposed budget would maintain funding levels for EPA-funded water infrastructure projects. Overall, the EPA's two largest water funds, which provide money to states for infrastructure loans, would receive almost $2.3 billion in fiscal 2019.

This $2.3 billion allocation is separate from the $20 billion proposed to go to EPA in the president's infrastructure proposal, which was also released Feb. 12. The $20 billion in the infrastructure plan would be used as matching funds meant to spur states, cities, and private companies to move forward on projects.

Before Congress last week reached a two-year budget deal, which Trump signed Feb. 9, the administration planned to cut more than $380 million from the infrastructure fund that goes toward wastewater projects. That would have been a more than 27 percent reduction from fiscal 2017, the last year for which detailed full-year budget figures exist.

The administration instead kept funding for the wastewater program and for the EPA's drinking water infrastructure program after the budget deal was reached.

Great Lakes, Chesapeake Cleanups Cut

AMERICAN OVERSIGHT

But funding for most regional water quality programs, in which the EPA supports cooperative efforts by states, would take a big hit under the Trump administration's fiscal 2019 request. It is seeking to eliminate EPA support for all such regional programs, with the exception of the Chesapeake Bay and the Great Lakes. Those two programs would be cut to 90 percent below the fiscal 2017 enacted levels.

The Chesapeake Bay regional cleanup effort would receive $7.3 million in fiscal 2019, down from the fiscal 2017 level of $73 million level, and the Great Lakes regional effort would receive $30 million, down from $300 million in fiscal 2017. The Trump administration proposed to eliminate those programs as well in its 2018 budget request, but Congress kept the funding.

Sen. Debbie Stabenow (D-Mich.) vowed to fight to restore that funding for the Great Lakes Restoration Initiative.

"This is outrageous," Stabenow said in a Feb. 12 statement. "People across Michigan spoke out and took action last year to stop these cuts and I know they'll do so again."

State water pollution programs also would get less funding under the Trump administration's budget plan. The White House is proposing $153 million for those EPA-funded programs, 33 percent below the enacted fiscal 2017 levels.

State Grant Cuts Sought

Trump also took aim once again at funding for state grants to reduce nonpoint source pollution, which comes from diffuse sources such as land runoff. His EPA budget proposal would eliminate funding for them in fiscal 2019.

The agency "will continue to coordinate with the United States Department of Agriculture to target funding where appropriate to address nonpoint sources," the administration said in its EPA budget request.

AMERICAN OVERSIGHT

The White House also is proposing to eliminate funding for beach protection, contending that local governments have acquired expertise and procedures to carry out this program without federal funding and technical assistance.

Whether the EPA will actually see an overall cut in those programs or its overall fiscal 2019 budget will depend in part on how Congress allocates increased spending it approved as part of a two-year budget deal that boosted both domestic and defense spending. The White House included an addendum in its budget plan released Feb. 12 to reflect that infusion of funds.

The EPA addendum would provide a boost of $724 million to the EPA, which is included in the $6.15 billion the White House requested in total. The White House proposed to use the additional funding for Superfund sites and EPA-funded state and tribal grants for drinking water and wastewater infrastructure projects.

Fees Boost Chemical Program

The EPA's chemicals program would see an increase in funding under the budget request, thanks to expected fees from the chemical industry.

The EPA requested $58.6 million for the chemicals program, which would represent an 8.8 percent cut from fiscal 2017 enacted levels. However, the EPA anticipates it would more than make up that difference through fees from chemical manufacturers, importers, and processors.

Updates to the nation's chemicals law authorized those fees to help defray agency costs. The EPA recently proposed a fee rule that presumes the agency would collect about $20 million annually.

AMERICAN OVERSIGHT

Shale Output Hasn't Grown This Fast Since Oil Was At $100

By Christopher Alessi, 2/13/18

LONDON—U.S. shale companies are churning out crude oil at a record pace that could overwhelm global demand and reverse the oil market's fragile recovery, a top energy-market observer said Tuesday.

U.S. shale production is growing faster in 2018 than it did even during the boom years of $100 a barrel oil prices from 2011 to 2014, said the International Energy Agency in its closely watched monthly report. The difference this time: Oil prices are about 40% lower.

The situation is "reminiscent of the first wave of U.S. shale growth," when a flood of American oil built up a global glut that sent prices crashing over four years ago, said the Paris-based IEA, which advises governments and corporations on energy trends.

Oil prices fell after the report's release in Europe before recovering somewhat. Brent, the international benchmark was down 0.06% at $62.55 while U.S. prices were down 0.27% at $59.13.

Shale producers "cut costs dramatically" during the nearly three-year-long oil industry downturn, the IEA said. They then took advantage of the Organization of the Petroleum Exporting Countries cartel's decision to cut its own output, which helped prices rise from the low $40s to over $70 a barrel as recently as late last month.

"All the indicators that suggest continued fast growth in the U.S. are in perfect alignment," the IEA said.

The result has been a series of milestones for U.S. oil production, which surpassed 10 million barrels a day for the first time since 1970 and is now higher than Saudi Arabian output. The IEA said the U.S. could catch up with Russia this year, the world's biggest producer at 11 million barrels a day.

AMERICAN OVERSIGHT

Led by U.S. shale companies, crude output from non-OPEC nations is expected to outpace the growth in oil demand in 2018, the IEA said. That is an important data point for oil traders who have been watching to see if shale production could catch up to robust demand that has been fueled by a strong global economy.

"U.S. shale is growing as sharply as it was in 2013-2014," said Bjarne Schieldrop, chief commodities analyst at SEB Markets. But the situation is different now because of the OPEC-led agreement to curb production, Mr. Schieldrop added.

OPEC and 10 other countries including Russia—whose combined output accounts for over 55% of global supply—have been steadfast in their resolve to cut output. These countries have cut far more than the 1.8 million barrels a day they promised, according to the IEA.

The shale-oil growth will apply downward pressure on prices in the coming weeks. But as long as OPEC sticks to the deal, there won't be a dramatic correction like there was in 2014, when prices fell from $114 a barrel to less than $70, Mr. Schieldrop said. Demand for OPEC oil "is not going to decline this year," he said.

Until two weeks ago, oil prices had risen almost nonstop for over six months.

The optimistic sentiment was driven not only by OPEC but also by strong economic news, geopolitical flare-ups in Iraq, Saudi Arabia and Iran, and supply outages in Venezuela and the U.K. Oil storage levels—a gauge of a still-existing oversupply—have come down.

The IEA said commercial oil inventories in the Organization for Economic Cooperation and Development—a group of industrialized, oil-consuming nations, including the U.S.—fell by 55.6 million barrels in December, in the largest drop since 2011.

"The huge drop in inventories is a bullish signal," said Giovanni Staunovo, commodities analyst

AMERICAN OVERSIGHT

at UBS Wealth Management.

But inventory levels in the U.S. have begun to rise again, after months of falling, as U.S. output rises.

U.S. crude output in January climbed by 1.3 million barrels a day compared with a year earlier, according to the IEA. Shale output accounted for much of those gains and is forecast to grow 1.25 million barrels a day on its own in 2018—its fastest rate ever, the IEA said.

The numbers represent a turnaround for a U.S. shale industry that was once dismissed as too high-cost to survive when oil prices fell from their peak several years ago.

https://www.bloomberg.com/news/articles/2018-02-12/americans-expect-biggest-pay-jump-in-years

Americans Expect Biggest Pay Jump In Years

By Matthew Boesler, 2/12/18

Americans are more optimistic about wage growth than they have been in years. U.S. consumers anticipate earnings will rise 2.73 percent in the coming year, the most since data collection began in 2013, according to the results of a New York Fed survey released Monday and conducted last month. January was only the third month in the survey's 56-month history in which expected wage growth topped expected consumer price inflation, which fell slightly, to 2.71 percent.

The Wall Street Journal

https://www.wsj.com/articles/trumps-big-public-works-dig-1518481073

Trump's Big Public Works Dig

By The Wall Street Journal Editorial Board, 2/12/18

AMERICAN OVERSIGHT

The White House on Monday unveiled its plan to raise $1.5 trillion in capital for public works. This will cause sticker shock among Republicans, but the President's innovative regulatory reforms deserve debate and may even garner some Democratic support.

President Trump is proposing to spend $200 billion in federal funds to leverage $1.3 trillion in state, local and private investment in public works. This bid is probably dead on arrival since Republicans have little appetite for more spending after blowing the budget sequestration caps last week.

Many bridges and airports need a face-lift, though claims of crumbling roads are overwrought and often politically motivated. One problem is that public works like other discretionary programs are being squeezed by entitlements, which constitute nearly two-thirds of federal spending. But even while politicians in Washington gripe that we—always the royal "we"—don't spend enough on public works, they consistently prioritize other discretionary programs.

Consider: Of the $787 billion stimulus in 2009, only about $60 billion financed public works. Most was spent on safety-net programs and other progressive causes. More Hurricane Sandy recovery money went to "community development" than repairing train tunnels.

Many projects that do receive federal funding aren't national priorities, such as California's bullet train. That's because the government typically awards "competitive" grants to politically favored projects rather than those that would produce the biggest economic benefits. The Obama Administration rigged cost-benefit analysis to reward projects that would promote public housing and reduce carbon emissions.

Mr. Trump's plan includes $100 billion in "incentives" to spur state and private investment; $50 billion for rural projects; $30 billion in revolving federal credit and capital funds; and $20 billion for "bold and innovative projects" that may not attract private investment "because of the project's unique characteristics." By any other name, this is a national infrastructure bank synonymous with cronyism.

AMERICAN OVERSIGHT

State and local governments have shown they're willing to finance worthwhile projects. According to the Pew Charitable Trusts, more than half of states have raised gas taxes over the past five years to pay for public works. Many innovative projects have no trouble attracting private investment. Consider the Cadiz pipeline, which aims to move 16.3 billion gallons of groundwater each year from the Mojave Desert to Southern California. Or the new desalination plant in Carlsbad, Calif.

Mr. Trump and Congress should instead focus new federal funding on national or regional priorities such as improving port security and repairing the Hudson River train tunnels, which would benefit most of the Northeast. Congress could also shift from categorical and competitive grants to block grants that give governors flexibility. This would also make state and local politicians more accountable for their spending. Let California Gov. Jerry Brown choose between spending billions more on his bullet train in the Central Valley or improving commuter rail in the Bay Area.

The real earth-moving parts of Mr. Trump's plan are the regulatory reforms, some of which will need to be fleshed out. The President wants to establish "one agency, one decision" for environmental reviews that would avoid regulatory hop-scotch. Good idea. Mr. Trump also suggests reducing environmental reviews to two years that can now drag out for a decade. Even many Democrats would like to expedite their favorite projects that have been grounded due to the discovery of a tiger salamander or other endangered species.

Another idea with merit is delegating environmental review and permitting decisions to states. California has been assigned these responsibilities under agreements with the Federal Highway Administration, as have Texas, Florida and Ohio. According to Gov. Brown, California has reduced the approval process from the "notice of intent to final environmental impact statement" on highway projects on average by 10 years.

Tucked into the plan is modest flexibility on Buy America requirements and Davis-Bacon, which requires contractors on federal projects to pay workers prevailing wages set by unions. These raise construction costs. While this flexibility is commendable, Mr. Trump's plan will also require tens of thousands of more workers. The Associated General Contractors of America reported last month that 78% of contractors had a hard time hiring. Apprenticeships can make up some of the shortage, but the government will need to increase H-2B visas to avoid delays or exorbitant project costs.

AMERICAN OVERSIGHT

Democrats are ripping the President's plan, and no doubt many think they can get more money if they win control of Congress in November. But they shouldn't be so sure. President Trump deserves credit for opening a debate in Congress about why merely spending more on public works won't help the public.

Trump Wants To End EPA Dredge And Fill Permitting, Vetoes

By Ariel Wittenberg, 2/12/18

The Trump administration wants to eliminate U.S. EPA authority over dredging and filling the nation's wetlands and waterways.

The proposal — which would require congressional approval — was included in the Trump administration's infrastructure plan released today.

The plan would give the Army Corps of Engineers complete authority over the Clean Water Act Section 404 program, taking EPA out of the process.

The administration also wants to eliminate EPA's 404(c) veto power over permits it disagrees with.

The proposal would mean the Army Corps would be solely responsible for reviewing project proposals and permitting them.

While EPA and the Army Corps would continue working on current efforts to rewrite regulations defining which wetlands and small waterways are subject to the Clean Water Act, the administration apparently wants EPA's authority to end there.

Not only would the Army Corps be the only agency to issue jurisdictional determinations about whether specific projects need permits for dredging and filling, the administration also wants to "eliminate duplicative oversight" by removing

AMERICAN OVERSIGHT

EPA's veto authority over Army Corps 404 permits.

"The threat of the veto creates significant uncertainty and delays permit decisions," the proposal says. "Removing EPA's authority to veto a 404 permit would make the permitting process more efficient and predictable."

That could have major ramifications for projects nationwide, especially the Pebble mine project in southwestern Alaska.

Last month, U.S. EPA Administrator Scott Pruitt unexpectedly withdrew his attempt to quash proposed pre-emptive restrictions on the controversial mine project (Greenwire, Jan. 30).

Today's proposal would render that meaningless by eliminating 404(c) altogether, leaving Pebble's critics with only EPA's science showing "significant and irreversible harm."

EPA and Army Corps' joint administration of dredging and filling permits dates back to the Clean Water Act's 1972 passage. A deal between the House and Senate during CWA negotiations maintained the Army Corps' traditional authority over dredging and filling as EPA became responsible for water pollution from those projects (Greenwire, June 29, 2017).

The agencies agreed in 1979 that while the Army Corps would be the primary permit administrator, EPA would have the final say. In 1992, the agencies signed another agreement that they would jointly participate in a dual review.

The administration's proposal follows requests from energy companies this fall that EPA be eliminated from 404 permitting.

"Unfortunately, the extreme difference in opinions and backgrounds between the agencies has created a significant disruption in their coordination and program administration," coal company Murray Energy Corp. wrote to the Army Corps in October. "Each agency is struggling to manage the program as they see fit creating an uncertainty and unclear path of progression for the applicants."

The comments were in response to the Army Corps' requests for comments on 30 regulations that "might be appropriate for repeal, replacement or modification" (Greenwire, Oct. 20, 2017).

The Waters Advocacy Coalition, which comprises more than 60 industry groups, also asked the Army Corps to withdraw from both the 1979 and 1992 agreements.

The 1979 agreement, the coalition wrote, "allows EPA to delay and/or second-guess the Corps expertise."

That position is also supported by several construction and farming groups.

"Recognizing the Corps' authority over its own 404 program would promote consistency and certainty, as permit holders could rely on a jurisdictional determination or 404 permit issued by the Corps without having to wonder if EPA will insert itself into the decision making process and undermine the Corps' positions," the National Association of Home Builders wrote.

https://www.jsonline.com/story/news/politics/2018/02/12/no-2-wisconsin-dnr-official-joins-cathy-stepp-regional-office-epa-chicago/330657002/

No. 2 Wisconsin DNR official joins Cathy Stepp at regional office of the EPA in Chicago

By Lee Bergquist, 2/12/18

A second top state official at the Wisconsin Department of Natural Resources is moving to the U.S. Environmental

AMERICAN OVERSIGHT

Protection Agency's regional office in Chicago — an agency that oversees federal regulatory issues in the Midwest, including Wisconsin.

Kurt Thiede, deputy secretary of the DNR, is joining the EPA as chief of staff for Cathy Stepp, the recently appointed regional administrator of the environmental enforcement agency.

Thiede was appointed deputy DNR secretary in March 2015 by Republican Gov. Scott Walker and has worked at the state agency since 1999 in a variety of positions. He told fellow employees in a memo Monday that one of his goals had been to change the perception that the DNR was a regulatory agency to be feared.

The move of Stepp and now Thiede to the EPA comes at a time when Foxconn Technology Group has started to submit environmental permit applications to the DNR for a massive industrial complex in Racine County.

The Foxconn project is likely to require some federal environmental reviews or oversight.

Foxconn is planning to construct a $10 billion flat-screen plant in Mount Pleasant. The Taiwan company has already won exemptions from some state environmental rules as part of a state financial incentive package.

The EPA said earlier this month that Stepp has stepped aside from involvement in two ongoing regulatory cases in Wisconsin because of previous ties when she was at the DNR.

Those two cases involve pollution problems at barrel refurbishing plants in St. Francis, Milwaukee and Oak Creek and a longstanding EPA review of the DNR's water regulation program.

Asked if Stepp would recuse herself in other cases, an EPA spokeswoman told the Milwaukee Journal Sentinel on Feb. 6 that Stepp is "consulting with EPA ethics officials to determine which, if any, additional matters she should recuse herself from." The spokeswoman said Monday she had no additional details.

As for Thiede, the spokeswoman said, "Mr. Thiede will consult with EPA ethics officials to determine which matters he should recuse himself from."

Under the Walker administration, Thiede has played an influential role as an experienced agency insider in a department whose top managers mostly came from the outside.

In a memo to DNR employees on Monday, Thiede said:

"When I started to take on leadership roles at the agency I wanted to make sure we began to change the narrative that the DNR was something to be feared, avoided, or maligned.

"I wanted the agency to be viewed as a partner, a resource, and I feel like we have made great strides in this area. I understand that by the nature of our work we can't make everyone happy all the time, but we can change perceptions and make sure that any experience with the agency is professional, respectful and enlightening."

Stepp, a Republican and former builder and state senator from Racine County, oversaw all environmental regulations in Wisconsin as secretary from 2011 until August.

She left the DNR in August for a post in the Trump administration in the Kansas City office of the EPA. On Dec. 19, she was appointed to head up the Midwest regional office in Chicago.

The regional office oversees Wisconsin, Indiana, Illinois, Michigan, Minnesota and Ohio.

AMERICAN OVERSIGHT

In Madison, DNR Secretary Dan Meyer said Ed Eberle, the assistant deputy secretary, will become the No. 2 official in the agency.

In another move, Pat Stevens, administrator of the environmental management division of the DNR, will become assistant deputy secretary.

Oklahoma Energy Today

EPA Disagrees With Auditor Jones Over Tar Creek Trust

By Jerry Bohnen, 2/12/18

Oklahoma State Auditor and Inspector Gary Jones apparently has a different opinion about the way contracts were handled by the Trust created to handle the relocation of homes and businesses at the Tar Creek Superfund site.

He thinks there might have been criminal wrongdoing. But the Tulsa World reported over the weekend that a federal investigator concluded otherwise. The paper said a 2013 report by the Environmental Protection Agency's Office of Inspector General claimed there were no irregularities or violations of law concerning the handling of the bids and contracts at Tar Creek in northeast Oklahoma.

The paper quoted the investigator from the report.

"Extensive record reviews and interviews were conducted and did not disclose evidence to support the allegations," Special Agent Susan Chandler wrote in the OIG report.

The OIG report was initially obtained by a member of the Lead-Impacted Communities Relocation Assistance Trust in 2014.

The investigation and conclusions drawn by the State Auditor were submitted to then-Attorney General Scott Pruitt who chose not to release the report. Current Attorney General Mike Hunter agreed also not to release it.

Jones still contends his report should be released to the public.

"If the attorney general thinks the auditor and inspector's office did shoddy work, I'd think he'd want the public to see it," Jones told the paper last week.

The OIG report lists 15 allegations against LICRAT and project engineer Jack Dalrymple. The World reported they deal with claims that Dalrymple and perhaps trust members conspired to rig the bidding process on a $3 million contract to remove and dispose of abandoned buildings and otherwise rehabilitate the Tar Creek site.

Dalrymple told the newspaper he thinks the Auditor and Inspector's report should be made public and he's not afraid of its release, adding, "I can tell you every single person on that trust was honest and true."

Bloomberg BNA

Water Infrastructure Among Few EPA Winners In Trump Budget Plan

By Dean Scott, 2/12/18

Water infrastructure funding would be essentially shielded from the deep cuts the Trump administration is seeking in Environmental Protection Agency funding in fiscal 2019, even as the president seeks to eliminate or greatly reduce regional water quality programs.

AMERICAN OVERSIGHT

The president's budget request released Feb. 12 would provide $6.15 billion to the EPA for the fiscal year that begins Oct. 1, a reduction of about 25 percent from the fiscal 2017 enacted levels. A proposed cut that deep is expected to encounter resistance from Senate Democrats and even some Republicans.

At the same time, the proposed budget would maintain funding levels for EPA-funded water infrastructure projects. Overall, the EPA's two largest water funds, which provide money to states for infrastructure loans, would receive almost $2.3 billion in fiscal 2019.

This $2.3 billion allocation is separate from the $20 billion proposed to go to EPA in the president's infrastructure proposal, which was also released Feb. 12. The $20 billion in the infrastructure plan would be used as matching funds meant to spur states, cities, and private companies to move forward on projects.

Before Congress last week reached a two-year budget deal, which Trump signed Feb. 9, the administration planned to cut more than $380 million from the infrastructure fund that goes toward wastewater projects. That would have been a more than 27 percent reduction from fiscal 2017, the last year for which detailed full-year budget figures exist.

The administration instead kept funding for the wastewater program and for the EPA's drinking water infrastructure program after the budget deal was reached.

Great Lakes, Chesapeake Cleanups Cut

But funding for most regional water quality programs, in which the EPA supports cooperative efforts by states, would take a big hit under the Trump administration's fiscal 2019 request. It is seeking to eliminate EPA support for all such regional programs, with the exception of the Chesapeake Bay and the Great Lakes. Those two programs would be cut to 90 percent below the fiscal 2017 enacted levels.

The Chesapeake Bay regional cleanup effort would receive $7.3 million in fiscal 2019, down from the fiscal 2017 level of $73 million level, and the Great Lakes regional effort would receive $30 million, down from $300 million in fiscal 2017. The Trump administration proposed to eliminate those programs as well in its 2018 budget request, but Congress kept the funding.

Sen. Debbie Stabenow (D-Mich.) vowed to fight to restore that funding for the Great Lakes Restoration Initiative.

"This is outrageous," Stabenow said in a Feb. 12 statement. "People across Michigan spoke out and took action last year to stop these cuts and I know they'll do so again."

State water pollution programs also would get less funding under the Trump administration's budget plan. The White House is proposing $153 million for those EPA-funded programs, 33 percent below the enacted fiscal 2017 levels.

State Grant Cuts Sought

Trump also took aim once again at funding for state grants to reduce nonpoint source pollution, which comes from diffuse sources such as land runoff. His EPA budget proposal would eliminate funding for them in fiscal 2019.

The agency "will continue to coordinate with the United States Department of Agriculture to target funding where appropriate to address nonpoint sources," the administration said in its EPA budget request.

The White House also is proposing to eliminate funding for beach protection, contending that local governments have acquired expertise and procedures to carry out this program without federal funding and technical assistance.

Whether the EPA will actually see an overall cut in those programs or its overall fiscal 2019 budget will depend in part on how Congress allocates increased spending it approved as part of a two-year budget deal that boosted both domestic and defense spending. The White House included an addendum in its budget plan released Feb. 12 to reflect that

AMERICAN OVERSIGHT

EXT-18-783-F-002731

ED_001863D_00000165-00007

infusion of funds.

The EPA addendum would provide a boost of $724 million to the EPA, which is included in the $6.15 billion the White House requested in total. The White House proposed to use the additional funding for Superfund sites and EPA-funded state and tribal grants for drinking water and wastewater infrastructure projects.

Fees Boost Chemical Program
The EPA's chemicals program would see an increase in funding under the budget request, thanks to expected fees from the chemical industry.

The EPA requested $58.6 million for the chemicals program, which would represent an 8.8 percent cut from fiscal 2017 enacted levels. However, the EPA anticipates it would more than make up that difference through fees from chemical manufacturers, importers, and processors.

Updates to the nation's chemicals law authorized those fees to help defray agency costs. The EPA recently proposed a fee rule that presumes the agency would collect about $20 million annually.

The Wall Street Journal

Shale Output Hasn't Grown This Fast Since Oil Was At $100
By Christopher Alessi, 2/13/18

LONDON—U.S. shale companies are churning out crude oil at a record pace that could overwhelm global demand and reverse the oil market's fragile recovery, a top energy-market observer said Tuesday.

U.S. shale production is growing faster in 2018 than it did even during the boom years of $100 a barrel oil prices from 2011 to 2014, said the International Energy Agency in its closely watched monthly report. The difference this time: Oil prices are about 40% lower.

The situation is "reminiscent of the first wave of U.S. shale growth," when a flood of American oil built up a global glut that sent prices crashing over four years ago, said the Paris-based IEA, which advises governments and corporations on energy trends.

Oil prices fell after the report's release in Europe before recovering somewhat. Brent, the international benchmark was down 0.06% at $62.55 while U.S. prices were down 0.27% at $59.13.

Shale producers "cut costs dramatically" during the nearly three-year-long oil industry downturn, the IEA said. They then took advantage of the Organization of the Petroleum Exporting Countries cartel's decision to cut its own output, which helped prices rise from the low $40s to over $70 a barrel as recently as late last month.

"All the indicators that suggest continued fast growth in the U.S. are in perfect alignment," the IEA said.

The result has been a series of milestones for U.S. oil production, which surpassed 10 million barrels a day for the first time since 1970 and is now higher than Saudi Arabian output. The IEA said the U.S. could catch up with Russia this year, the world's biggest producer at 11 million barrels a day.

Led by U.S. shale companies, crude output from non-OPEC nations is expected to outpace the growth in oil demand in 2018, the IEA said. That is an important data point for oil traders who have been watching to see if shale production could catch up to robust demand that has been fueled by a strong global economy.

AMERICAN OVERSIGHT

"U.S. shale is growing as sharply as it was in 2013-2014," said Bjarne Schieldrop, chief commodities analyst at SEB Markets. But the situation is different now because of the OPEC-led agreement to curb production, Mr. Schieldrop added.

OPEC and 10 other countries including Russia—whose combined output accounts for over 55% of global supply—have been steadfast in their resolve to cut output. These countries have cut far more than the 1.8 million barrels a day they promised, according to the IEA.

The shale-oil growth will apply downward pressure on prices in the coming weeks. But as long as OPEC sticks to the deal, there won't be a dramatic correction like there was in 2014, when prices fell from $114 a barrel to less than $70, Mr. Schieldrop said. Demand for OPEC oil "is not going to decline this year," he said.

Until two weeks ago, oil prices had risen almost nonstop for over six months.

The optimistic sentiment was driven not only by OPEC but also by strong economic news, geopolitical flare-ups in Iraq, Saudi Arabia and Iran, and supply outages in Venezuela and the U.K. Oil storage levels—a gauge of a still-existing oversupply—have come down.

The IEA said commercial oil inventories in the Organization for Economic Cooperation and Development—a group of industrialized, oil-consuming nations, including the U.S.—fell by 55.6 million barrels in December, in the largest drop since 2011.

"The huge drop in inventories is a bullish signal," said Giovanni Staunovo, commodities analyst at UBS Wealth Management.

But inventory levels in the U.S. have begun to rise again, after months of falling, as U.S. output rises.

U.S. crude output in January climbed by 1.3 million barrels a day compared with a year earlier, according to the IEA. Shale output accounted for much of those gains and is forecast to grow 1.25 million barrels a day on its own in 2018—its fastest rate ever, the IEA said.

The numbers represent a turnaround for a U.S. shale industry that was once dismissed as too high-cost to survive when oil prices fell from their peak several years ago.

Bloomberg

https://www.bloomberg.com/news/articles/2018-02-12/americans-expect-biggest-pay-jump-in-years

Americans Expect Biggest Pay Jump In Years

By Matthew Boesler, 2/12/18

Americans are more optimistic about wage growth than they have been in years. U.S. consumers anticipate earnings will rise 2.73 percent in the coming year, the most since data collection began in 2013, according to the results of a New York Fed survey released Monday and conducted last month. January was only the third month in the survey's 56-month history in which expected wage growth topped expected consumer price inflation, which fell slightly, to 2.71 percent.

The Wall Street Journal

Trump's Big Public Works Dig

By The Wall Street Journal Editorial Board, 2/12/18

AMERICAN OVERSIGHT

The White House on Monday unveiled its plan to raise $1.5 trillion in capital for public works. This will cause sticker shock among Republicans, but the President's innovative regulatory reforms deserve debate and may even garner some Democratic support.

President Trump is proposing to spend $200 billion in federal funds to leverage $1.3 trillion in state, local and private investment in public works. This bid is probably dead on arrival since Republicans have little appetite for more spending after blowing the budget sequestration caps last week.

Many bridges and airports need a face-lift, though claims of crumbling roads are overwrought and often politically motivated. One problem is that public works like other discretionary programs are being squeezed by entitlements, which constitute nearly two-thirds of federal spending. But even while politicians in Washington gripe that we—always the royal "we"—don't spend enough on public works, they consistently prioritize other discretionary programs.

Consider: Of the $787 billion stimulus in 2009, only about $60 billion financed public works. Most was spent on safety-net programs and other progressive causes. More Hurricane Sandy recovery money went to "community development" than repairing train tunnels.

Many projects that do receive federal funding aren't national priorities, such as California's bullet train. That's because the government typically awards "competitive" grants to politically favored projects rather than those that would produce the biggest economic benefits. The Obama Administration rigged cost-benefit analysis to reward projects that would promote public housing and reduce carbon emissions.

Mr. Trump's plan includes $100 billion in "incentives" to spur state and private investment; $50 billion for rural projects; $30 billion in revolving federal credit and capital funds; and $20 billion for "bold and innovative projects" that may not attract private investment "because of the project's unique characteristics." By any other name, this is a national infrastructure bank synonymous with cronyism.

State and local governments have shown they're willing to finance worthwhile projects. According to the Pew Charitable Trusts, more than half of states have raised gas taxes over the past five years to pay for public works. Many innovative projects have no trouble attracting private investment. Consider the Cadiz pipeline, which aims to move 16.3 billion gallons of groundwater each year from the Mojave Desert to Southern California. Or the new desalination plant in Carlsbad, Calif.

Mr. Trump and Congress should instead focus new federal funding on national or regional priorities such as improving port security and repairing the Hudson River train tunnels, which would benefit most of the Northeast. Congress could also shift from categorical and competitive grants to block grants that give governors flexibility. This would also make state and local politicians more accountable for their spending. Let California Gov. Jerry Brown choose between spending billions more on his bullet train in the Central Valley or improving commuter rail in the Bay Area.

The real earth-moving parts of Mr. Trump's plan are the regulatory reforms, some of which will need to be fleshed out. The President wants to establish "one agency, one decision" for environmental reviews that would avoid regulatory hop-scotch. Good idea. Mr. Trump also suggests reducing environmental reviews to two years that can now drag out for a decade. Even many Democrats would like to expedite their favorite projects that have been grounded due to the discovery of a tiger salamander or other endangered species.

Another idea with merit is delegating environmental review and permitting decisions to states. California has been assigned these responsibilities under agreements with the Federal Highway Administration, as have Texas, Florida and Ohio. According to Gov. Brown, California has reduced the approval process from the "notice of intent to final environmental impact statement" on highway projects on average by 10 years.

Tucked into the plan is modest flexibility on Buy America requirements and Davis-Bacon, which requires contractors on

AMERICAN OVERSIGHT

federal projects to pay workers prevailing wages set by unions. These raise construction costs. While this flexibility is commendable, Mr. Trump's plan will also require tens of thousands of more workers. The Associated General Contractors of America reported last month that 78% of contractors had a hard time hiring. Apprenticeships can make up some of the shortage, but the government will need to increase H-2B visas to avoid delays or exorbitant project costs.

Democrats are ripping the President's plan, and no doubt many think they can get more money if they win control of Congress in November. But they shouldn't be so sure. President Trump deserves credit for opening a debate in Congress about why merely spending more on public works won't help the public.

Brietbart: Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration. He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

Gulf Live: EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

AMERICAN OVERSIGHT

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula. In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula. The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

Daily Caller: Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel. The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business. Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

Tulsa World: Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Named EPA Head

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver. As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Indiana to Get EPA Money for Lead Cleanup, Water Upgrades

By: David Schultz, 4/19/18

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state.

EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

AMERICAN OVERSIGHT

Pruitt also highlighted a $436 million loan from the Environmental Protection Agency to Indiana through the agency's Water Infrastructure Finance and Innovation Act program, which provides low-cost financing for drinking water and wastewater infrastructure upgrades. The agency first announced last summer it had accepted Indiana's application for this loan as part of its first-ever round of financing under the program established in 2014.

The EPA said in an April 19 statement that the money would flow through to the state "once all needed processes are complete." The loan cleared a preliminary EPA environmental review earlier this year. This loan is one of 12 that the EPA granted through its first $2.3 billion round of financing through this program.

The agency's press office did not immediately respond to Bloomberg Environment's request for comment on what specific actions the EPA took on April 19 on the Indiana loan or about whether the loan has been finalized.

Pruitt Talks to Residents

The announcement came after Pruitt personally visited Whiting, which is on Lake Michigan, and spoke with people living near the contaminated Federated Minerals site.

"There was a woman who was a property owner waiting for them," Thomas Frank, an activist with the East Chicago, Ind.-based Community Strategy Group, an environmental justice advocacy coalition, told Bloomberg Environment. "Apparently her property tested high in lead and she was showing them where the tests had occurred,"

Pruitt was at the Indiana site about 10 or 15 minutes, Frank said.

Pruitt also made a stop lasting less than 20 minutes at the EPA's Region 5 headquarters in Chicago, Mike Mikulka, president of American Federation of Government Employees Local 704 union, told Bloomberg Environment.

AMERICAN OVERSIGHT

Brietbart

Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

By: Chris Talgo, 4/19/18

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration.

He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

The disingenuousness of these attacks is made evident by the silence of these same groups when several Obama-era federal agencies engaged in illegal and/or unethical activities. The fact very few Americans know the name "Richard Windsor" is proof of selective outrage by "good government" groups and the media. (Windsor is the name of a fake EPA employee created by former EPA head Lisa Jackson to skirt public-records laws.)

Thankfully, Pruitt is not letting ad hominem attacks distract him from his mission of implementing a "back to basics" agenda for EPA. Unlike most of his predecessors at EPA and his opponents on the left, Pruitt believes, "We can and we will achieve clean air and clean water and we will also have strong economic growth and job creation at the same time."

To accomplish these long-overdue reforms, Pruitt has focused on and been incredibly successful at implementing a "three E's" strategy: concentrating on the environment, economy, and engagement with state and local governments.

1. **Protecting the Environment**
2.

AMERICAN OVERSIGHT

Under Obama, the EPA became a highly politicized agency, one that had been captured by radical environmental groups. When Pruitt took office, he vowed to refocus the agency on its core mission: protecting the environment and staying out of politics.

In May 2017, Pruitt created the Super Fund Task Force "to provide recommendations for improving and expediting site cleanups and promoting redevelopment." As of this writing, EPA has already completed seven Super Fund site clean-ups.

Additionally, EPA is prioritizing drinking water problems, including the egregious lead problem that arose during the Obama era in Flint, Michigan.

2. **Sensible regulations that encourage economic growth**

Obama's two EPA administrators, Jackson and Gina McCarthy, instituted an unprecedented era of unnecessary, costly, burdensome rulemaking, undermining personal property rights and economic growth.

Fortunately, Pruitt has put an end to this. His highlights, which are many, include announcing that the United States will pull out of the Paris climate accord.

In 2016, Obama pushed the United States into the Paris climate agreement, which analysts found would reduce U.S. gross domestic product by more than $2.5 trillion and result in an average annual job loss of nearly 400,000 by 2035 compared to jobs projections without the accord.

Pruitt has been a staunch advocate of withdrawing from this fake "treaty," and his support for the idea surely contributed to Trump's decision to pull back from the Paris accords.

In October 2017, Pruitt proposed repealing Obama's Clean Power Plan, a set of regulations that economists estimated would cost U.S. taxpayers $40 billion per year and produce no effect on global carbon dioxide levels.

AMERICAN OVERSIGHT

Also in October, Pruitt issued a directive to end EPA's "sue and settle" practices, a scheme in which radical environmental groups sue EPA to impose their agenda and EPA chooses not to fight the lawsuit in order to satisfy radical environmentalists' demands.

Putting the interests of ordinary Americans ahead of special-interest groups, Pruitt declared in October 2017 "the days of regulation through litigation are over."

In another measure designed to protect consumers, Pruitt announced in March 2018 the EPA will no longer use "secret science" in crafting regulations. Going forward, EPA rulemaking will be transparent and based on good data—not ideology.

Most recently, Pruitt suspended for review the onerous Corporate Annual Fuel Economy (CAFE) standards Obama's regime rushed through near the end of his final term. These burdensome regulations mandated unachievable fuel economy standards and would have forced carmakers to produce vehicles Americans don't want—and for an extra $3,800 per vehicle and negligible environmental benefits.

3. **Engaging with state and local partners**

For decades, EPA has usurped power from state and local governments. Pruitt is reversing this disturbing trend by instituting "cooperative federalism." Under this program, EPA will coordinate with state and local governments, rather than dictating edicts. His track record so far includes his revision of the definition and implementation of Obama's 2015 Waters of the United States rule (WOTUS), which was overly broad and abusive. WOTUS effectively granted to the federal government jurisdiction over every puddle and tiny body of water on private land.

"EPA is restoring states' important role in the regulation of water," Pruitt stated when announcing the end of the rule.

EPA is also establishing Compliance Assistance Centers to "help businesses, colleges and universities, local governments, tribes and federal facilities understand and comply with environmental requirements and save money," and it's introducing Next Generation Compliance standards to "reduce costs and saves time and resources, while improving compliance."

AMERICAN OVERSIGHT

Under Pruitt, the EPA is no longer imposing onerous rules that stifle economic growth and bankrupt the country. Instead, Pruitt is enacting levelheaded regulations that strike a proper balance between protecting the environment and maintaining consumer freedom.

After little more than a year on the job, Pruitt has transformed EPA's culture and restored its mission. The EPA Swamp has been substantially drained, a huge setback for power-grabbing leftists. And it's primarily for that reason the left and mainstream media have succumbed to attacking Pruitt's character. Just imagine how apoplectic they will get if Pruitt is allowed to continue his record of success in the years ahead!

EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

By: Tyler Carter, 4/19/18

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula.

In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula.

The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

AMERICAN OVERSIGHT

"In just over a year, EPA has taken multiple important actions to accelerate the remediation of the Mississippi Phosphates Superfund Site," Pruitt said. "This memo reflects my commitment to addressing Superfund sites as quickly and safely as possible to ensure human health and economic activity in the surrounding areas are fully protected."

The cleanup plan identified in the Action Memorandum focuses on the closure of the East Gypsum Stack and the North Ponds at the West Gypsum Stack. The cleanup will eliminate storage of more than 500 million gallons of contaminated water on site and reduce the volume of water requiring treatment by an estimated 98 percent.

Design of the closure system is underway. EPA is evaluating the possible use of local dredge spoil to cap and close the East Gypsum Stack.

In response to comments received during the public comment period, EPA is also evaluating the use of engineered geosynthetic turf products as an alternative cap/cover system in its design.

The MPC Site is a former diammonium phosphate fertilizer plant that began operation in the 1950s. The facility ceased operations in December 2014 under Chapter 11 bankruptcy protection, leaving more than 700,000,000 gallons of acidic, nutrient-rich wastewater stored at the facility.

The wastewater--if improperly discharged--may be toxic to fish and other forms of marine life and can also cause algal blooms. Previous releases of untreated wastewater from the site (before EPA took over wastewater treatment operations) resulted in fish kills.

EPA currently oversees wastewater treatment at a rate of approximately 2-4 million gallons per day--at a cost of over $1 million per month--due to the high volume of wastewater requiring treatment. EPA has expended approximately $17 million to treat wastewater at the site.

EPA assumed control of wastewater treatment operations at the former MPC fertilizer facility once the MPC Environmental Trust, which owns the property, ran out of funds in February 2017.

AMERICAN OVERSIGHT

"Pascagoula has lived with this catastrophic issue for years with no response," Mayor Dane Maxwell said. "Since President Trump took office and under Administrator Pruitt not only have we had a response, but it has been from the highest levels. Making Mississippi Phosphates cleanup a priority is very important for the entire Gulf Coast."

Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

By: Jason Hopkins, 4/19/18

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel.

The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business.

Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

AMERICAN OVERSIGHT

However, there is one major detail included about Southwest Airlines: They do not offer first-class travel. This detail was included in the body of the AP article, but the headline and angle of the report framed Pruitt as a hypocrite when it comes to personal travel.

"Despite their misleading headline, the Associated Press knowingly reported that that there are no premium-class seats on Southwest Airlines," read a Wednesday statement from the EPA. "The fact is: Administrator Pruitt consistently follows the same security measures, which is not about sitting in first class but sitting near the front of the plane. It's impossible to fly first-class on Southwest Airlines, however Administrator Pruitt always sat in the first few rows of the aircraft."

This was not the only detail the EPA took issue with. The AP claimed on Twitter that it confirmed their story with the agency.

However, EPA spokesperson Jahan Wilcox said this tweet is false and that the agency never confirmed their report. "The same security procedures are followed whether Administrator Pruitt is on official or personal travel," the official statement provided to the AP read. The statement neither confirmed nor denied the story.

Pruitt, who has racked up thousands of dollars in travel expenses since taking the helm of the EPA, has received immense criticism for taking first-class flights on taxpayer dollars. Democrats and other Pruitt opponents have used news of his expensive flights to push for his ouster. The EPA, however, maintains more expensive flights are necessary for his safety.

Pruitt has been the target of aggression and profane language at airports since leading the agency.

"He was approached in the airport numerous times, to the point of profanities being yelled at him and so forth," Henry Barnet, director of the EPA's Office of Criminal Enforcement, told Politico in a Feb. 15 report. "We felt that based on the recommendation from the team leader, the special agent in charge, that it would be better suited to have him in business or first class, away from close proximity from those individuals who were approaching him and being extremely rude,

AMERICAN OVERSIGHT

using profanities and potential for altercations and so forth."

Tulsa World

http://www.tulsaworld.com/news/usworld/scott-pruitt-showed-penchant-for-travel-drivers-even-before-being/article_4aa07e53-b8ff-5241-a223-58d1829655d2.html

Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Names EPA Head

By: Ellen Knickmeyer and Sean Murphy, 4/20/18

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver.

As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Records obtained by The Associated Press show Pruitt traveled extensively as Oklahoma's attorney general, taking 18 out-of-state trips in 2015 and 2016, for example, including 11 to Washington, D.C. Although some travel expenses were reimbursed by conservative think tanks where Pruitt spoke, records show no sign of reimbursement for several trips involving appearances before them.

Immediately after taking office as attorney general, Pruitt started using a full-time driver who chauffeured him in a large black SUV from his home in Tulsa to the office in Oklahoma City, about 90 miles away.

Pruitt's daily calendars show the driver — variously shown on the records as "driver" or "agent" — was often an office investigator, a licensed law enforcement officer who typically investigates crimes for the agency.

AMERICAN OVERSIGHT

"It appears he created his own security detail," said Gary Jones, Oklahoma's state auditor and a fellow Republican.

As EPA administrator, Pruitt has been under intense scrutiny since it was first revealed last month that he had stayed last year in a bargain-priced Capitol Hill condo tied to a fossil-fuels lobbyist. Multiple investigations have been launched by government watchdogs and congressional committees looking into luxury travel expenses, outsized security spending and massive raises awarded to political appointees.

Lincoln Ferguson, a former spokesman for the attorney general who now serves as a senior adviser to him at the EPA, said if Pruitt's out-of-state travel was strictly for political purposes, it would have been paid for by campaign funds. But travel records show the trips were arranged through a state-contracted travel agency, and few show any reimbursement was made.

In Oklahoma, Pruitt routinely made the three-hour commute from his home in Tulsa to the state Capitol in Oklahoma City during the working day, according to the calendars.

The entry for Dec. 7, 2015, for example, shows the entry: "8:15 to 9:45, depart Tulsa for OKC" and "3:30-5, depart OKC for Tulsa."

That was despite Pruitt expanding his office's Tulsa branch during his time. The AP reported in December 2016 that the move to bigger, pricier offices in Tulsa were part of a 40 percent increase in his office's expenses as attorney general. Pruitt also added nearly 60 employees to the attorney general's office.

By contrast, Pruitt's predecessor, Democrat Drew Edmondson, who held the attorney general post for 16 years, said he typically used a four-door sedan and drove himself to events.

Ferguson, the senior adviser to Pruitt, said "there was no wasted time" on Pruitt's commutes between Tulsa and Oklahoma City.

AMERICAN OVERSIGHT

"He was working, reviewing documents, on the phone," Ferguson said.

Overall spending on travel by Pruitt's office averaged about $270,000 a year in his last four years as Oklahoma's attorney general, up 26 percent from his predecessor's final year in office. The figures do not include a total for Pruitt's trips alone. The attorney general's office spent $201,000 on travel during his predecessor's last year in the office.

The calendars are heavily redacted and entire days are blacked out.

But the records do show Pruitt frequently traveled to Washington to speak to groups including the Federalist Society; the Club for Growth, a free-enterprise advocacy group; and an anti-abortion rally. He also made similar appearances elsewhere, such as one before the small-government FreedomWorks group in Cleveland on "Battling the Regulatory State."

"If it's not state-related, then the state should not be responsible for" the cost, said Jones, the state auditor. "You can't use any public assets for personal or political reasons."

Records show many of the trips occurred during the workweek, when Pruitt was drawing a state salary of $132,000. Oklahoma broadly bans first-class tickets for state employees. The travel records show only one first-class flight for Pruitt, with a scrawled note on it showing Pruitt's campaign paid for it.

Edmondson, who is now running for governor, said his travel expenses as attorney general typically covered national and regional conventions of attorneys general.

"I think you'll find that his out-of-state travel would far exceed any other attorney general" in Oklahoma, said former Gov. David Walters, a Democrat, who recalled Pruitt speaking before local clubs on topics such as the Obama administration, rather than crime or consumer fraud in Oklahoma.

AMERICAN OVERSIGHT

Conservative groups hosting Pruitt appeared to reimburse most of Pruitt's flights and some other direct state travel expenses after 2015, and some beforehand.

But on one trip in January 2016, Pruitt billed taxpayers more than $1,000 for a trip to Washington in which he held separate meetings with executives of three conservative think tanks: the APP Foundation, The Federalist Society and Club for Growth. There was no record of reimbursement for that trip. Three weeks later, Pruitt spent the weekend in California for a dinner and a speech to The Federalist Society, which reimbursed the state for his travel.

Associated Press

https://apnews.com/e29d5563fc0c45caa4faa6b3749405a6/Comey-memo:-Trump-complained-about-Flynn's-'judgment-issues

In Comey memos, Trump fixates on 'hookers,' frets over Flynn

By: Mary Clare Jalonick, Eric Tucker, and Chad Day, 4/20/18

In a series of startlingly candid conversations, President Donald Trump told former FBI Director James Comey that he had serious concerns about the judgment of a top adviser, asked about the possibility of jailing journalists and described a boast from Vladimir Putin about Russian prostitutes, according to Comey's notes of the talks obtained by The Associated Press on Thursday night.

The 15 pages of documents contain new details about a series of interactions with Trump that Comey found so unnerving that he chose to document them in writing. Those seven encounters in the weeks and months before Comey's May 2017 firing include a Trump Tower discussion about allegations involving Trump and prostitutes in Moscow; a White House dinner at which Comey says Trump asked him for his loyalty; and a private Oval Office discussion where the ex-FBI head says the president asked him to end an investigation into Michael Flynn, the former White House national security adviser.

AMERICAN OVERSIGHT

The documents had been eagerly anticipated since their existence was first revealed last year, especially since Comey's interactions with Trump are a critical part of special counsel Robert Mueller's investigation into whether the president sought to obstruct justice. Late Thursday night, Trump tweeted that the memos "show clearly that there was NO COLLUSION and NO OBSTRUCTION."

The president also accused Comey of leaking classified information. The memos obtained by the AP were unclassified, though some portions were blacked out as classified. Details from Comey's memos reported in news stories last year appear to come from the unclassified portions.

In explaining the purpose of creating the memos, which have been provided to Mueller, Comey has said he "knew there might come a day when I would need a record of what had happened" to defend not only himself but the FBI as well.

The memos cover the first three months of the Trump administration, a period of upheaval marked by staff turnover, a cascade of damaging headlines and revelations of an FBI investigation into potential ties between the Trump campaign and Russia. The documents reflect Trump's uneasiness about that investigation, though not always in ways that Comey seemed to anticipate.

In a February 2017 conversation, for instance, Trump told Comey how Putin told him, "we have some of the most beautiful hookers in the world" even as the president adamantly, and repeatedly, distanced himself from a salacious allegation concerning him and prostitutes in Moscow, according to one memo.

In another memo, Comey recounts how Trump at a private White House dinner pointed his fingers at his head and complained that Flynn, his embattled national security adviser, "has serious judgment issues." The president blamed Flynn for failing to alert him promptly to a congratulatory call from a world leader, causing a delay for Trump in returning a message to an official whose name is redacted in the documents.

"I did not comment at any point during this topic and there was no mention or acknowledgment of any FBI interest in or contact with General Flynn," Comey wrote.

AMERICAN OVERSIGHT

By that point, the FBI had already interviewed Flynn about his contacts with the Russian ambassador, Sergey Kislyak, and the Justice Department had already warned White House officials that they were concerned Flynn was vulnerable to blackmail.

Flynn was fired Feb. 13, 2017, after White House officials said he had misled them about his Russian contacts during the transition period by saying that he had not discussed sanctions. The following day, according to a separate memo, Comey says Trump cleared the Oval Office of other officials, encouraged him to let go of the investigation into Flynn and called him a good guy. Flynn pleaded guilty to lying to the FBI and is now cooperating with Mueller's investigation.

The memos reveal that days before Flynn's firing, then-White House chief of staff Reince Priebus asked Comey if Flynn's communications were being monitored under a secret surveillance warrant.

"Do you have a FISA order on Mike Flynn?" Priebus asked Comey, according to the memos, referring to an order under the Foreign Intelligence Surveillance Act.

Comey said he "paused for a few seconds and then said that I would answer here, but that this illustrated the kind of question that had to be asked and answered through established channels."

Comey's response is redacted on the unclassified memos.

The memos also show Trump's continued distress at a dossier of allegations — compiled by an ex-British spy whose work was funded by the Democratic National Committee and the Clinton campaign — examining potential ties between him and his aides and the Kremlin. Comey writes how Trump repeatedly denied to him having been involved in an encounter with Russian prostitutes in a Moscow hotel.

"The President said 'the hookers thing' is nonsense," Comey writes, noting that Trump then

AMERICAN OVERSIGHT

related the conversation with Putin about the "most beautiful hookers." Comey says Trump did not say when Putin had made the comment.

The documents also include the president's musings about pursuing leakers and imprisoning journalists. They also provide insight into Comey's personal and professional opinions. He judges the administration's travel ban to be legally valid, and he takes a swipe at former Attorney General Loretta Lynch, calling her predecessor, Eric Holder, "smarter and more sophisticated and smoother."

The memos were provided to Congress earlier Thursday as House Republicans escalated criticism of the Justice Department, threatening to subpoena the documents and questioning officials.

In a letter sent to three Republican House committee chairmen Thursday evening, Assistant Attorney General Stephen Boyd wrote that the department was sending a classified version of the memos and an unclassified version. The department released Boyd's letter publicly but did not release the memos. The chairmen issued a statement late Thursday saying the memos show that Comey clearly never felt threatened, and Trump didn't obstruct justice.

Justice officials had allowed some lawmakers to view the memos but had never provided copies to Congress. Boyd wrote that the department had also provided the memos to several Senate committees.

Boyd wrote in the letter that the department "consulted the relevant parties" and concluded that releasing the memos would not adversely affect any ongoing investigations. Mueller is investigating potential ties between Russia and Trump's 2016 campaign as well as possible obstruction of justice by the president.

Comey is on a publicity tour to promote his new book, "A Higher Loyalty." He revealed last year that he had written the memos after conversations with Trump.

He said in an interview Thursday with CNN that he's "fine" with the Justice Department turning

AMERICAN OVERSIGHT

his memos over to Congress.

"I think what folks will see if they get to see the memos is I've been consistent since the very beginning, right after my encounters with President Trump, and I'm consistent in the book and tried to be transparent in the book as well," he said.

Washington Post

https://www.washingtonpost.com/politics/trump-hires-giuliani-two-other-attorneys-amid-mounting-legal-turmoil-over-russia/2018/04/19/8346a7ca-4418-11e8-8569-26fda6b404c7_story.html?utm_term=.995f4a24ac4a

Trump hires Giuliana, Two Other Attorneys Amid Mounting Legal Turmoil Over Russia

By: Robert Costa, Josh Dawsey and Rosalind Helderman, 4/19/18

Former New York mayor Rudolph W. Giuliani and two other former federal prosecutors joined President Trump's legal team Thursday following weeks of turbulence and struggles to find attorneys who would agree to represent the president in the ongoing federal probe into Russian election interference.

The reshuffling comes at a particularly tense juncture for Trump, who aides said is increasingly frustrated by special counsel Robert S. Mueller III's investigation and with the senior officials at the Justice Department.

The entry of Giuliani, an experienced attorney with a combative reputation, immediately raises questions about how Trump will engage with Mueller and the leadership at Justice. Some Trump advisers are concerned that the president could use his -executive authority to close or diminish the special counsel probe, which has spawned a parallel investigation in New York targeting his personal attorney.

"I'm doing it because I hope we can negotiate an end to this for the good of the country and

AMERICAN OVERSIGHT

because I have high regard for the president and for Bob Mueller," Giuliani said in an interview Thursday.

Trump said in a statement that Giuliani "wants to get this matter quickly resolved."

In recent days, the president has been regularly venting and speculating to aides about his legal status and the expected timeline for the Russia investigation to end, according to associates briefed on the discussions.

Rudolph W. Giuliani was an ardent supporter of President Trump during the 2016 campaign, and the former New York mayor was considered for the post of attorney general. (Mike Segar/Reuters)

Trump also loudly and repeatedly complained to several advisers earlier this week that former FBI director James B. Comey, former deputy FBI director Andrew McCabe and former Democratic presidential nominee Hillary Clinton, among others, should be charged with crimes for misdeeds alleged by Republicans, the associates said.

Although White House officials said Thursday that Trump has not called Justice Department officials or taken any formal action, the persistent grousing has made some advisers anxious, according to two people close to the president. A publicity tour by Comey to promote his book critical of Trump, "A Higher Loyalty," has attracted particular attention from the president, who has disparaged Comey publicly and privately.

Trump also complained this week about Supreme Court Justice Neil M. Gorsuch, saying the judge had proved too liberal in recent cases, according to administration officials who heard about the complaints. Associates said he was incensed that Gorsuch had voted against the administration on an immigration case and said it renewed his doubts that Gorsuch would be a reliable conservative. One top Trump adviser played down the comments as unhappiness with Gorsuch's decision rather than with Gorsuch broadly.

Giuliani, 73, brings a familiarity with several of the legal fronts that Trump is navigating. He is a former associate attorney general and a former U.S. attorney for the Southern District of New York, which is the office overseeing an investigation of Trump's personal attorney, Michael

AMERICAN OVERSIGHT

Cohen.

Trump counsel Jay Sekulow said Thursday that former federal prosecutors Jane Serene Raskin and Marty Raskin, a couple who manage a Florida-based law firm, have also agreed to join the legal team.

Giuliani is certain to come under intense scrutiny for his role. His own pre-election activities two years ago have been the subject of criticism from Democrats, especially television interviews in which he suggested he had sources providing him inside information about the FBI's investigation of Clinton's private email server when she was secretary of state.

A Justice Department Inspector General report on the department's handling of the Clinton investigations is expected to be released in coming weeks and will probably include results of leak investigations regarding the Clinton probe.

Numerous other challenges face the attorneys who will work alongside Sekulow and counsel Ty Cobb — who have functioned as Trump's legal nucleus for weeks following the resignation of John Dowd, a legal veteran and the team's former leader. Dowd stepped down in March amid clashes over strategy and whether Trump should sit for a voluntary interview with Mueller. The legal team has often been beset by infighting.

"The big question is, how's he going to play with everybody else?" said a lawyer involved with the investigation who was not authorized to speak publicly. "Will he be combative Rudy, or will he play well with Mueller's team? Will he try to walk . . . back from the brink and answer the big question, which is whether the president will sit for an interview? And will Trump listen to him?"

Giuliani declined to say whether Trump has made a final decision on whether to sit for an interview with federal investigators. Trump has been mulling it for weeks, moving away from the idea after the home, offices and hotel room of Cohen were raided this month. Trump reacted angrily, calling it "disgraceful."

AMERICAN OVERSIGHT

"It's too early for me to say that," Giuliani replied, when asked whether a Trump interview is unlikely to happen.

Giuliani also declined to discuss whether Deputy Attorney General Rod J. Rosenstein, who has been under fire from conservatives and oversees the Russia probe, could be fired by the president in the coming weeks.

"I'm not involved in anything about those issues. My advice on Mueller has been this: He should be allowed to do his job. He's entitled to do his job."

Giuliani said he formalized his decision in recent days, including over dinner last week at Trump's Mar-a-Lago resort in Florida. Giuliani and Trump spoke Thursday about the legal plan moving forward, along with Sekulow, whom he has known for years and called a friend. He added that he and Cobb also spoke, on Wednesday.

Giuliani — who will take a leave from his law firm, Greenberg Traurig, and is in the midst of a divorce from his third wife — said he would spend a "great deal of time" in Washington working with Trump but would continue to live in New York. He has been frequently been seen holding court at the Trump International Hotel in Washington, dining and drinking with friends and browsing for gourmet cigars.

Trump had considered Giuliani for attorney general and has said in recent weeks he needs a New York-based attorney. Many leading white-collar lawyers, such as former solicitor general Theodore Olson, have declined Trump's entreaties, often citing conflicts or expressing unease about the high-profile case.

Trump is also known to be a difficult client who does not always listen to his attorneys' advice, according to lawyers who know him. And Giuliani, once a top adviser, grew frustrated with his treatment during the transition and had receded from the inner circle.

As he has closely monitored cable-news programs chronicling his presidency and the Mueller probe, Trump has swatted away the notion that he cannot attract prominent attorneys. He has

AMERICAN OVERSIGHT

also spoken about his desire for a bolstered team and wondered aloud about the damage that Cohen's legal proceedings could bring, according to the associates briefed on the discussions, who requested anonymity to talk about them.

Giuliani's arrival is part of a broader shift in Trump's inner circle toward the core allies and brusque and brutal style that defined his outsider presidential campaign and his business career. Beyond Mueller, aides said everyone and everything around Trump feels liable to become a target for his wrath as he grapples with difficult issues at home and abroad, in Syria and North Korea.

"What we've been seeing with the president is that he is picking A-level people that he knows are experienced but also know him well," said Trump ally Christopher Ruddy, the president and CEO of Newsmax Media, a conservative outlet. "One of the problems in the first year was that people didn't work out because they didn't know him and they didn't have experience for the position."

EPA Morning News Highlights 04.20.18

BNA: Indian to Get EPA Money for Lead Cleanup, Water Upgrades.
The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state. EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Brietbart: Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked
Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration. He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

Gulf Live: EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site
The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula. In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula. The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

Daily Caller: Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements
The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel. The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business. Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

Tulsa World: Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Named EPA Head
Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver. As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Indiana to Get EPA Money for Lead Cleanup, Water Upgrades
By: David Schultz, 4/19/18

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state.

EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Pruitt also highlighted a $436 million loan from the Environmental Protection Agency to Indiana through the agency's Water Infrastructure Finance and Innovation Act program, which provides low-cost financing for drinking water and wastewater infrastructure upgrades. The agency first announced last summer it had accepted Indiana's application for this loan as part of its first-ever round of financing under the program established in 2014.

The EPA said in an April 19 statement that the money would flow through to the state "once all needed processes are complete." The loan cleared a preliminary EPA environmental review earlier this year. This loan is one of 12 that the EPA granted through its first $2.3 billion round of financing through this program.

The agency's press office did not immediately respond to Bloomberg Environment's request for comment on what specific actions the EPA took on April 19 on the Indiana loan or about whether the loan has been finalized.
Pruitt Talks to Residents

The announcement came after Pruitt personally visited Whiting, which is on Lake Michigan, and spoke with people living near the contaminated Federated Minerals site.

"There was a woman who was a property owner waiting for them," Thomas Frank, an activist with the East Chicago, Ind.-based Community Strategy Group, an environmental justice advocacy coalition, told Bloomberg Environment.
"Apparently her property tested high in lead and she was showing them where the tests had occurred,"
Pruitt was at the Indiana site about 10 or 15 minutes, Frank said.

Pruitt also made a stop lasting less than 20 minutes at the EPA's Region 5 headquarters in Chicago, Mike Mikulka, president of American Federation of Government Employees Local 704 union, told Bloomberg Environment.

Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked
By: Chris Talgo, 4/19/18

AMERICAN OVERSIGHT

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration.

He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

The disingenuousness of these attacks is made evident by the silence of these same groups when several Obama-era federal agencies engaged in illegal and/or unethical activities. The fact very few Americans know the name "Richard Windsor" is proof of selective outrage by "good government" groups and the media. (Windsor is the name of a fake EPA employee created by former EPA head Lisa Jackson to skirt public-records laws.)

Thankfully, Pruitt is not letting ad hominem attacks distract him from his mission of implementing a "back to basics" agenda for EPA. Unlike most of his predecessors at EPA and his opponents on the left, Pruitt believes, "We can and we will achieve clean air and clean water and we will also have strong economic growth and job creation at the same time." To accomplish these long-overdue reforms, Pruitt has focused on and been incredibly successful at implementing a "three E's" strategy: concentrating on the environment, economy, and engagement with state and local governments.

1. **Protecting the Environment**
2.

Under Obama, the EPA became a highly politicized agency, one that had been captured by radical environmental groups. When Pruitt took office, he vowed to refocus the agency on its core mission: protecting the environment and staying out of politics.

In May 2017, Pruitt created the Super Fund Task Force "to provide recommendations for improving and expediting site cleanups and promoting redevelopment." As of this writing, EPA has already completed seven Super Fund site clean-ups. Additionally, EPA is prioritizing drinking water problems, including the egregious lead problem that arose during the Obama era in Flint, Michigan.

2. **Sensible regulations that encourage economic growth**

Obama's two EPA administrators, Jackson and Gina McCarthy, instituted an unprecedented era of unnecessary, costly, burdensome rulemaking, undermining personal property rights and economic growth.

Fortunately, Pruitt has put an end to this. His highlights, which are many, include announcing that the United States will pull out of the Paris climate accord.

In 2016, Obama pushed the United States into the Paris climate agreement, which analysts found would reduce U.S. gross domestic product by more than $2.5 trillion and result in an average annual job loss of nearly 400,000 by 2035 compared to jobs projections without the accord.

Pruitt has been a staunch advocate of withdrawing from this fake "treaty," and his support for the idea surely contributed to Trump's decision to pull back from the Paris accords.

In October 2017, Pruitt proposed repealing Obama's Clean Power Plan, a set of regulations that economists estimated would cost U.S. taxpayers $40 billion per year and produce no effect on global carbon dioxide levels.

Also in October, Pruitt issued a directive to end EPA's "sue and settle" practices, a scheme in which radical environmental groups sue EPA to impose their agenda and EPA chooses not to fight the lawsuit in order to satisfy radical

AMERICAN OVERSIGHT

environmentalists' demands.

Putting the interests of ordinary Americans ahead of special-interest groups, Pruitt declared in October 2017 "the days of regulation through litigation are over."
In another measure designed to protect consumers, Pruitt announced in March 2018 the EPA will no longer use "secret science" in crafting regulations. Going forward, EPA rulemaking will be transparent and based on good data—not ideology.

Most recently, Pruitt suspended for review the onerous Corporate Annual Fuel Economy (CAFE) standards Obama's regime rushed through near the end of his final term. These burdensome regulations mandated unachievable fuel economy standards and would have forced carmakers to produce vehicles Americans don't want—and for an extra $3,800 per vehicle and negligible environmental benefits.

3. **Engaging with state and local partners**

For decades, EPA has usurped power from state and local governments. Pruitt is reversing this disturbing trend by instituting "cooperative federalism." Under this program, EPA will coordinate with state and local governments, rather than dictating edicts. His track record so far includes his revision of the definition and implementation of Obama's 2015 Waters of the United States rule (WOTUS), which was overly broad and abusive. WOTUS effectively granted to the federal government jurisdiction over every puddle and tiny body of water on private land.

"EPA is restoring states' important role in the regulation of water," Pruitt stated when announcing the end of the rule. EPA is also establishing Compliance Assistance Centers to "help businesses, colleges and universities, local governments, tribes and federal facilities understand and comply with environmental requirements and save money," and it's introducing Next Generation Compliance standards to "reduce costs and saves time and resources, while improving compliance."

Under Pruitt, the EPA is no longer imposing onerous rules that stifle economic growth and bankrupt the country. Instead, Pruitt is enacting levelheaded regulations that strike a proper balance between protecting the environment and maintaining consumer freedom.

After little more than a year on the job, Pruitt has transformed EPA's culture and restored its mission. The EPA Swamp has been substantially drained, a huge setback for power-grabbing leftists. And it's primarily for that reason the left and mainstream media have succumbed to attacking Pruitt's character. Just imagine how apoplectic they will get if Pruitt is allowed to continue his record of success in the years ahead!

EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

By: Tyler Carter, 4/19/18

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula.

In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula.

The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

AMERICAN OVERSIGHT

"In just over a year, EPA has taken multiple important actions to accelerate the remediation of the Mississippi Phosphates Superfund Site," Pruitt said. "This memo reflects my commitment to addressing Superfund sites as quickly and safely as possible to ensure human health and economic activity in the surrounding areas are fully protected."

The cleanup plan identified in the Action Memorandum focuses on the closure of the East Gypsum Stack and the North Ponds at the West Gypsum Stack. The cleanup will eliminate storage of more than 500 million gallons of contaminated water on site and reduce the volume of water requiring treatment by an estimated 98 percent.

Design of the closure system is underway. EPA is evaluating the possible use of local dredge spoil to cap and close the East Gypsum Stack.

In response to comments received during the public comment period, EPA is also evaluating the use of engineered geosynthetic turf products as an alternative cap/cover system in its design.

The MPC Site is a former diammonium phosphate fertilizer plant that began operation in the 1950s. The facility ceased operations in December 2014 under Chapter 11 bankruptcy protection, leaving more than 700,000,000 gallons of acidic, nutrient-rich wastewater stored at the facility.

The wastewater--if improperly discharged--may be toxic to fish and other forms of marine life and can also cause algal blooms. Previous releases of untreated wastewater from the site (before EPA took over wastewater treatment operations) resulted in fish kills.

EPA currently oversees wastewater treatment at a rate of approximately 2-4 million gallons per day--at a cost of over $1 million per month--due to the high volume of wastewater requiring treatment. EPA has expended approximately $17 million to treat wastewater at the site.

EPA assumed control of wastewater treatment operations at the former MPC fertilizer facility once the MPC Environmental Trust, which owns the property, ran out of funds in February 2017.

"Pascagoula has lived with this catastrophic issue for years with no response," Mayor Dane Maxwell said. "Since President Trump took office and under Administrator Pruitt not only have we had a response, but it has been from the highest levels. Making Mississippi Phosphates cleanup a priority is very important for the entire Gulf Coast."

Daily Caller

Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

By: Jason Hopkins, 4/19/18

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel.

The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business.

AMERICAN OVERSIGHT

Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

However, there is one major detail included about Southwest Airlines: They do not offer first-class travel. This detail was included in the body of the AP article, but the headline and angle of the report framed Pruitt as a hypocrite when it comes to personal travel.

"Despite their misleading headline, the Associated Press knowingly reported that that there are no premium-class seats on Southwest Airlines," read a Wednesday statement from the EPA. "The fact is: Administrator Pruitt consistently follows the same security measures, which is not about sitting in first class but sitting near the front of the plane. It's impossible to fly first-class on Southwest Airlines, however Administrator Pruitt always sat in the first few rows of the aircraft."

This was not the only detail the EPA took issue with. The AP claimed on Twitter that it confirmed their story with the agency.

However, EPA spokesperson Jahan Wilcox said this tweet is false and that the agency never confirmed their report. "The same security procedures are followed whether Administrator Pruitt is on official or personal travel," the official statement provided to the AP read. The statement neither confirmed nor denied the story.

Pruitt, who has racked up thousands of dollars in travel expenses since taking the helm of the EPA, has received immense criticism for taking first-class flights on taxpayer dollars. Democrats and other Pruitt opponents have used news of his expensive flights to push for his ouster. The EPA, however, maintains more expensive flights are necessary for his safety.

Pruitt has been the target of aggression and profane language at airports since leading the agency.

"He was approached in the airport numerous times, to the point of profanities being yelled at him and so forth," Henry Barnet, director of the EPA's Office of Criminal Enforcement, told Politico in a Feb. 15 report. "We felt that based on the recommendation from the team leader, the special agent in charge, that it would be better suited to have him in business or first class, away from close proximity from those individuals who were approaching him and being extremely rude, using profanities and potential for altercations and so forth."

http://www.tulsaworld.com/news/usworld/scott-pruitt-showed-penchant-for-travel-drivers-even-before-being/article_4aa07e53-b8ff-5241-a223-58d1829655d2.html

Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Names EPA Head

By: Ellen Knickmeyer and Sean Murphy, 4/20/18

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver.

As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Records obtained by The Associated Press show Pruitt traveled extensively as Oklahoma's attorney general, taking 18 out-of-state trips in 2015 and 2016, for example, including 11 to Washington, D.C. Although some travel expenses were reimbursed by conservative think tanks where Pruitt spoke, records show no sign of reimbursement for several trips

AMERICAN OVERSIGHT

involving appearances before them.

Immediately after taking office as attorney general, Pruitt started using a full-time driver who chauffeured him in a large black SUV from his home in Tulsa to the office in Oklahoma City, about 90 miles away.

Pruitt's daily calendars show the driver — variously shown on the records as "driver" or "agent" — was often an office investigator, a licensed law enforcement officer who typically investigates crimes for the agency.

"It appears he created his own security detail," said Gary Jones, Oklahoma's state auditor and a fellow Republican.

As EPA administrator, Pruitt has been under intense scrutiny since it was first revealed last month that he had stayed last year in a bargain-priced Capitol Hill condo tied to a fossil-fuels lobbyist. Multiple investigations have been launched by government watchdogs and congressional committees looking into luxury travel expenses, outsized security spending and massive raises awarded to political appointees.

Lincoln Ferguson, a former spokesman for the attorney general who now serves as a senior adviser to him at the EPA, said if Pruitt's out-of-state travel was strictly for political purposes, it would have been paid for by campaign funds. But travel records show the trips were arranged through a state-contracted travel agency, and few show any reimbursement was made.

In Oklahoma, Pruitt routinely made the three-hour commute from his home in Tulsa to the state Capitol in Oklahoma City during the working day, according to the calendars.

The entry for Dec. 7, 2015, for example, shows the entry: "8:15 to 9:45, depart Tulsa for OKC" and "3:30-5, depart OKC for Tulsa."

That was despite Pruitt expanding his office's Tulsa branch during his time. The AP reported in December 2016 that the move to bigger, pricier offices in Tulsa were part of a 40 percent increase in his office's expenses as attorney general. Pruitt also added nearly 60 employees to the attorney general's office.

By contrast, Pruitt's predecessor, Democrat Drew Edmondson, who held the attorney general post for 16 years, said he typically used a four-door sedan and drove himself to events.

Ferguson, the senior adviser to Pruitt, said "there was no wasted time" on Pruitt's commutes between Tulsa and Oklahoma City.

"He was working, reviewing documents, on the phone," Ferguson said.

Overall spending on travel by Pruitt's office averaged about $270,000 a year in his last four years as Oklahoma's attorney general, up 26 percent from his predecessor's final year in office. The figures do not include a total for Pruitt's trips alone. The attorney general's office spent $201,000 on travel during his predecessor's last year in the office.

The calendars are heavily redacted and entire days are blacked out.

But the records do show Pruitt frequently traveled to Washington to speak to groups including the Federalist Society; the Club for Growth, a free-enterprise advocacy group; and an anti-abortion rally. He also made similar appearances elsewhere, such as one before the small-government FreedomWorks group in Cleveland on "Battling the Regulatory State."

"If it's not state-related, then the state should not be responsible for" the cost, said Jones, the state auditor. "You can't use any public assets for personal or political reasons."

AMERICAN OVERSIGHT

Records show many of the trips occurred during the workweek, when Pruitt was drawing a state salary of $132,000. Oklahoma broadly bans first-class tickets for state employees. The travel records show only one first-class flight for Pruitt, with a scrawled note on it showing Pruitt's campaign paid for it.

Edmondson, who is now running for governor, said his travel expenses as attorney general typically covered national and regional conventions of attorneys general.

"I think you'll find that his out-of-state travel would far exceed any other attorney general" in Oklahoma, said former Gov. David Walters, a Democrat, who recalled Pruitt speaking before local clubs on topics such as the Obama administration, rather than crime or consumer fraud in Oklahoma.

Conservative groups hosting Pruitt appeared to reimburse most of Pruitt's flights and some other direct state travel expenses after 2015, and some beforehand.

But on one trip in January 2016, Pruitt billed taxpayers more than $1,000 for a trip to Washington in which he held separate meetings with executives of three conservative think tanks: the APP Foundation, The Federalist Society and Club for Growth. There was no record of reimbursement for that trip. Three weeks later, Pruitt spent the weekend in California for a dinner and a speech to The Federalist Society, which reimbursed the state for his travel.

Associated Press

https://apnews.com/e29d5563fc0c45caa4faa6b3749405a6/Comey-memo:-Trump-complained-about-Flynn's-'judgment-issues

In Comey memos, Trump fixates on 'hookers,' frets over Flynn

By: Mary Clare Jalonick, Eric Tucker, and Chad Day, 4/20/18

In a series of startlingly candid conversations, President Donald Trump told former FBI Director James Comey that he had serious concerns about the judgment of a top adviser, asked about the possibility of jailing journalists and described a boast from Vladimir Putin about Russian prostitutes, according to Comey's notes of the talks obtained by The Associated Press on Thursday night.

The 15 pages of documents contain new details about a series of interactions with Trump that Comey found so unnerving that he chose to document them in writing. Those seven encounters in the weeks and months before Comey's May 2017 firing include a Trump Tower discussion about allegations involving Trump and prostitutes in Moscow; a White House dinner at which Comey says Trump asked him for his loyalty; and a private Oval Office discussion where the ex-FBI head says the president asked him to end an investigation into Michael Flynn, the former White House national security adviser.

The documents had been eagerly anticipated since their existence was first revealed last year, especially since Comey's interactions with Trump are a critical part of special counsel Robert Mueller's investigation into whether the president sought to obstruct justice. Late Thursday night, Trump tweeted that the memos "show clearly that there was NO COLLUSION and NO OBSTRUCTION."

The president also accused Comey of leaking classified information. The memos obtained by the AP were unclassified, though some portions were blacked out as classified. Details from Comey's memos reported in news stories last year appear to come from the unclassified portions.

In explaining the purpose of creating the memos, which have been provided to Mueller, Comey has said he "knew there might come a day when I would need a record of what had happened" to defend not only himself but the FBI as well.

AMERICAN OVERSIGHT

The memos cover the first three months of the Trump administration, a period of upheaval marked by staff turnover, a cascade of damaging headlines and revelations of an FBI investigation into potential ties between the Trump campaign and Russia. The documents reflect Trump's uneasiness about that investigation, though not always in ways that Comey seemed to anticipate.

In a February 2017 conversation, for instance, Trump told Comey how Putin told him, "we have some of the most beautiful hookers in the world" even as the president adamantly, and repeatedly, distanced himself from a salacious allegation concerning him and prostitutes in Moscow, according to one memo.

In another memo, Comey recounts how Trump at a private White House dinner pointed his fingers at his head and complained that Flynn, his embattled national security adviser, "has serious judgment issues." The president blamed Flynn for failing to alert him promptly to a congratulatory call from a world leader, causing a delay for Trump in returning a message to an official whose name is redacted in the documents.

"I did not comment at any point during this topic and there was no mention or acknowledgment of any FBI interest in or contact with General Flynn," Comey wrote.

By that point, the FBI had already interviewed Flynn about his contacts with the Russian ambassador, Sergey Kislyak, and the Justice Department had already warned White House officials that they were concerned Flynn was vulnerable to blackmail.

Flynn was fired Feb. 13, 2017, after White House officials said he had misled them about his Russian contacts during the transition period by saying that he had not discussed sanctions. The following day, according to a separate memo, Comey says Trump cleared the Oval Office of other officials, encouraged him to let go of the investigation into Flynn and called him a good guy. Flynn pleaded guilty to lying to the FBI and is now cooperating with Mueller's investigation.

The memos reveal that days before Flynn's firing, then-White House chief of staff Reince Priebus asked Comey if Flynn's communications were being monitored under a secret surveillance warrant.

"Do you have a FISA order on Mike Flynn?" Priebus asked Comey, according to the memos, referring to an order under the Foreign Intelligence Surveillance Act.

Comey said he "paused for a few seconds and then said that I would answer here, but that this illustrated the kind of question that had to be asked and answered through established channels."

Comey's response is redacted on the unclassified memos.

The memos also show Trump's continued distress at a dossier of allegations — compiled by an ex-British spy whose work was funded by the Democratic National Committee and the Clinton campaign — examining potential ties between him and his aides and the Kremlin. Comey writes how Trump repeatedly denied to him having been involved in an encounter with Russian prostitutes in a Moscow hotel.

"The President said 'the hookers thing' is nonsense," Comey writes, noting that Trump then related the conversation with Putin about the "most beautiful hookers." Comey says Trump did not say when Putin had made the comment.

The documents also include the president's musings about pursuing leakers and imprisoning journalists. They also provide insight into Comey's personal and professional opinions. He judges the administration's travel ban to be legally valid, and he takes a swipe at former Attorney General Loretta Lynch, calling her predecessor, Eric Holder, "smarter and more sophisticated and smoother."

The memos were provided to Congress earlier Thursday as House Republicans escalated criticism of the Justice

AMERICAN OVERSIGHT

Department, threatening to subpoena the documents and questioning officials.

In a letter sent to three Republican House committee chairmen Thursday evening, Assistant Attorney General Stephen Boyd wrote that the department was sending a classified version of the memos and an unclassified version. The department released Boyd's letter publicly but did not release the memos. The chairmen issued a statement late Thursday saying the memos show that Comey clearly never felt threatened, and Trump didn't obstruct justice.

Justice officials had allowed some lawmakers to view the memos but had never provided copies to Congress. Boyd wrote that the department had also provided the memos to several Senate committees.

Boyd wrote in the letter that the department "consulted the relevant parties" and concluded that releasing the memos would not adversely affect any ongoing investigations. Mueller is investigating potential ties between Russia and Trump's 2016 campaign as well as possible obstruction of justice by the president.

Comey is on a publicity tour to promote his new book, "A Higher Loyalty." He revealed last year that he had written the memos after conversations with Trump.

He said in an interview Thursday with CNN that he's "fine" with the Justice Department turning his memos over to Congress.

"I think what folks will see if they get to see the memos is I've been consistent since the very beginning, right after my encounters with President Trump, and I'm consistent in the book and tried to be transparent in the book as well," he said.

Washington Post

https://www.washingtonpost.com/politics/trump-hires-giuliani-two-other-attorneys-amid-mounting-legal-turmoil-over-russia/2018/04/19/8346a7ca-4418-11e8-8569-26fda6b404c7_story.html?utm_term=.995f4a24ac4a

Trump hires Giuliana, Two Other Attorneys Amid Mounting Legal Turmoil Over Russia

By: Robert Costa, Josh Dawsey and Rosalind Helderman, 4/19/18

Former New York mayor Rudolph W. Giuliani and two other former federal prosecutors joined President Trump's legal team Thursday following weeks of turbulence and struggles to find attorneys who would agree to represent the president in the ongoing federal probe into Russian election interference.

The reshuffling comes at a particularly tense juncture for Trump, who aides said is increasingly frustrated by special counsel Robert S. Mueller III's investigation and with the senior officials at the Justice Department.

The entry of Giuliani, an experienced attorney with a combative reputation, immediately raises questions about how Trump will engage with Mueller and the leadership at Justice. Some Trump advisers are concerned that the president could use his -executive authority to close or diminish the special counsel probe, which has spawned a parallel investigation in New York targeting his personal attorney.

"I'm doing it because I hope we can negotiate an end to this for the good of the country and because I have high regard for the president and for Bob Mueller," Giuliani said in an interview Thursday.

Trump said in a statement that Giuliani "wants to get this matter quickly resolved."

In recent days, the president has been regularly venting and speculating to aides about his legal status and the expected timeline for the Russia investigation to end, according to associates briefed on the discussions.

AMERICAN OVERSIGHT

Rudolph W. Giuliani was an ardent supporter of President Trump during the 2016 campaign, and the former New York mayor was considered for the post of attorney general. (Mike Segar/Reuters)
Trump also loudly and repeatedly complained to several advisers earlier this week that former FBI director James B. Comey, former deputy FBI director Andrew McCabe and former Democratic presidential nominee Hillary Clinton, among others, should be charged with crimes for misdeeds alleged by Republicans, the associates said.

Although White House officials said Thursday that Trump has not called Justice Department officials or taken any formal action, the persistent grousing has made some advisers anxious, according to two people close to the president. A publicity tour by Comey to promote his book critical of Trump, "A Higher Loyalty," has attracted particular attention from the president, who has disparaged Comey publicly and privately.

Trump also complained this week about Supreme Court Justice Neil M. Gorsuch, saying the judge had proved too liberal in recent cases, according to administration officials who heard about the complaints. Associates said he was incensed that Gorsuch had voted against the administration on an immigration case and said it renewed his doubts that Gorsuch would be a reliable conservative. One top Trump adviser played down the comments as unhappiness with Gorsuch's decision rather than with Gorsuch broadly.

Giuliani, 73, brings a familiarity with several of the legal fronts that Trump is navigating. He is a former associate attorney general and a former U.S. attorney for the Southern District of New York, which is the office overseeing an investigation of Trump's personal attorney, Michael Cohen.

Trump counsel Jay Sekulow said Thursday that former federal prosecutors Jane Serene Raskin and Marty Raskin, a couple who manage a Florida-based law firm, have also agreed to join the legal team.

Giuliani is certain to come under intense scrutiny for his role. His own pre-election activities two years ago have been the subject of criticism from Democrats, especially television interviews in which he suggested he had sources providing him inside information about the FBI's investigation of Clinton's private email server when she was secretary of state.

A Justice Department Inspector General report on the department's handling of the Clinton investigations is expected to be released in coming weeks and will probably include results of leak investigations regarding the Clinton probe.

Numerous other challenges face the attorneys who will work alongside Sekulow and counsel Ty Cobb — who have functioned as Trump's legal nucleus for weeks following the resignation of John Dowd, a legal veteran and the team's former leader. Dowd stepped down in March amid clashes over strategy and whether Trump should sit for a voluntary interview with Mueller. The legal team has often been beset by infighting.

"The big question is, how's he going to play with everybody else?" said a lawyer involved with the investigation who was not authorized to speak publicly. "Will he be combative Rudy, or will he play well with Mueller's team? Will he try to walk . . . back from the brink and answer the big question, which is whether the president will sit for an interview? And will Trump listen to him?"

Giuliani declined to say whether Trump has made a final decision on whether to sit for an interview with federal investigators. Trump has been mulling it for weeks, moving away from the idea after the home, offices and hotel room of Cohen were raided this month. Trump reacted angrily, calling it "disgraceful."

"It's too early for me to say that," Giuliani replied, when asked whether a Trump interview is unlikely to happen.

Giuliani also declined to discuss whether Deputy Attorney General Rod J. Rosenstein, who has been under fire from conservatives and oversees the Russia probe, could be fired by the president in the coming weeks.

"I'm not involved in anything about those issues. My advice on Mueller has been this: He should be allowed to do his

AMERICAN OVERSIGHT

job. He's entitled to do his job."

Giuliani said he formalized his decision in recent days, including over dinner last week at Trump's Mar-a-Lago resort in Florida. Giuliani and Trump spoke Thursday about the legal plan moving forward, along with Sekulow, whom he has known for years and called a friend. He added that he and Cobb also spoke, on Wednesday.

Giuliani — who will take a leave from his law firm, Greenberg Traurig, and is in the midst of a divorce from his third wife — said he would spend a "great deal of time" in Washington working with Trump but would continue to live in New York. He has been frequently been seen holding court at the Trump International Hotel in Washington, dining and drinking with friends and browsing for gourmet cigars.

Trump had considered Giuliani for attorney general and has said in recent weeks he needs a New York-based attorney. Many leading white-collar lawyers, such as former solicitor general Theodore Olson, have declined Trump's entreaties, often citing conflicts or expressing unease about the high-profile case.

Trump is also known to be a difficult client who does not always listen to his attorneys' advice, according to lawyers who know him. And Giuliani, once a top adviser, grew frustrated with his treatment during the transition and had receded from the inner circle.

As he has closely monitored cable-news programs chronicling his presidency and the Mueller probe, Trump has swatted away the notion that he cannot attract prominent attorneys. He has also spoken about his desire for a bolstered team and wondered aloud about the damage that Cohen's legal proceedings could bring, according to the associates briefed on the discussions, who requested anonymity to talk about them.

Giuliani's arrival is part of a broader shift in Trump's inner circle toward the core allies and brusque and brutal style that defined his outsider presidential campaign and his business career. Beyond Mueller, aides said everyone and everything around Trump feels liable to become a target for his wrath as he grapples with difficult issues at home and abroad, in Syria and North Korea.

"What we've been seeing with the president is that he is picking A-level people that he knows are experienced but also know him well," said Trump ally Christopher Ruddy, the president and CEO of Newsmax Media, a conservative outlet. "One of the problems in the first year was that people didn't work out because they didn't know him and they didn't have experience for the position."

Subject: Morning Energy: Pruitt watch: What comes next? — IG requests abound — GAO tells Congress to ban coal self-bonding

By Kelsey Tamborrino | 04/06/2018 05:41 AM EDT

With help from Alex Guillén and Daniel Lippman

WHAT COMES NEXT? EPA Administrator Scott Pruitt fared seemingly well Thursday, at least comparatively — appearing in no contentious interviews and receiving a fuller backing from the president. Of course, that could all change today. White House officials, conscious of how quickly Trump's mind can change about defending top advisers, have avoided publicly making any definitive statements about how long Pruitt will remain in his job, POLITICO's Eliana Johnson and Andrew Restuccia report.

RENT'S DUE: Eliana and Andrew also report the administrator was sometimes slow to pay the rent on his $50-per-night lease in Capitol Hill, according to two people with knowledge of the situation. Pruitt's lobbyist-turned-landlord had to pester him for payment, although it appears he eventually paid his back rent. More here.

STRONG FEELINGS: President Donald Trump praised Pruitt multiple times throughout Thursday, although he acknowledged that he would "have to look at" all of the reports on the EPA administrator. "He's been very courageous. It hasn't been easy, but I think he's done a fantastic job," Trump said of Pruitt. The president was returning from an event in West Virginia, where "they love Scott Pruitt," he said.

Meanwhile, Pruitt kept a low profile Thursday: The EPA chief headed to Kentucky, where he addressed members of the Association of Air Pollution Control Agencies on the agency's National Ambient Air Quality Standards attainment goal and the Trump administration's efforts to speed up the environmental permitting process. "EPA is making tremendous progress working with states and our co-regulators to improve air quality and provide regulatory certainty for local communities," Pruitt said in a statement released after the event.

And he may stay out of sight today too: Plans for a public event with Pruitt at the White House to announce changes to the air quality standards program today have apparently been shelved, but Trump still intends to sign an executive order on the subject, The Washington Post reports. Pruitt had said earlier this week that an announcement on the new policy was in the works, but EPA did not respond to ME's questions Thursday night.

DRIP, DRIP, DRIP: More Pruitt stories emerged Thursday, culminating in an explosive report from The New York Times that detailed how at least five EPA officials were reassigned or demoted, or requested new jobs, after raising concerns about Pruitt's spending habits and ability to manage. Pruitt at one point requested the use of emergency sirens to get him and his security detail through D.C. traffic, including at least one trip to French restaurant Le Diplomate, according to the Times. Read the full report here.

AMERICAN OVERSIGHT

Other Thursday headlines include:

— **Pruitt endorsed raises for two of his aides,** The Washington Post reports, though he left it to others to actually carry out the pay increases. Two EPA officials and one from the White House told the Post that Pruitt told subordinates to give the raises to senior counsel Sarah Greenwalt and Millan Hupp, his director of scheduling and advance, both of whom had worked for him in Oklahoma.

— **Even with the continued spray of scandals,** CNN reported Trump floated replacing Attorney General Jeff Sessions with Pruitt as recently as this week. "He was 100 percent still trying to protect Pruitt because Pruitt is his fill-in for Sessions," one source familiar with Trump's thinking told CNN.

— **The Department of Consumer and Regulatory Affairs** issued a citation to the owner of Pruitt's condo, due to lack of proper licensing to rent the unit. A NBC 4 Washington reporter tweeted the fine could hit $2,034.

THE $16,000 SEAT: That's about how much it cost for Pruitt to fly to Morocco last year, according to a new letter from the top Democrat on the House Oversight Committee, citing documents the panel received from EPA. Rep. Elijah Cummings said the documents showed "that Mr. Pruitt's seat cost $16,164," but were insufficient to determine the full costs for Pruitt and his aides on that and other trips. He asked Oversight Chairman Trey Gowdy to issue a subpoena for more. Read that letter here.

WHERE THE GOP STANDS: Republicans aren't going to give up a fight for Pruitt's permanence any time soon. A leadership aide tells POLITICO's Burgess Everett that the Senate won't be able to confirm a conservative EPA administrator if Pruitt is canned. That may contribute to the choir of GOP voices who are still standing firmly in the embattled EPA administrator's corner. Conservatives like Sens. Rand Paul and Ted Cruz vocalized their support on Twitter Thursday. "He's been an effective member of the President's team," Sen. Jim Inhofe said in a statement.

Still, a third Republican joined in calling on Pruitt to resign Thursday. "I fundamentally disagree with how Pruitt has handled the EPA," Rep. Elise Stefanik said at a town hall meeting.

HART WEIGHS IN: Energy lobbyist Steven Hart, whose wife Vicki co-owned the condo rented to Pruitt, expressed regret in a statement released to POLITICO. Hart said he was taking the matter "very seriously" and apologized to his wife, "whose fantastic career is being maligned unnecessarily." Hart also reiterated that the condo was not owned by his firm Williams & Jensen, its partners or any other employees of the firm. "[A]ny suggestion that Administrator Pruitt's short-term rental of one of its bedrooms in 2017 resulted in undue influence for the firm or its clients with business before the EPA is simply false," Hart said. "I am confident in these facts, and certain that all fair and impartial assessments of the matter will conclude accordingly."

IG REQUESTS ABOUND: Democratic Sens. Tom Carper and Sheldon Whitehouse asked EPA's inspector general to expand an existing investigation into Pruitt's alleged use of a special hiring authority to give raises to two aides, Pro's Alex Guillén reports. Alex also confirmed earlier Wednesday that the IG is reviewing requests to investigate Pruitt's $50-a-night lease agreement — the first step before determining whether to launch a formal probe. Opposition research group American Bridge 21st Century added itself to the list Thursday, sending a letter to the IG requesting an investigation into Pruitt's rental.

— **Another new letter to the IG emerged Thursday** from Carper, who raised questions last week — before Pruitt's scandal saga hit fever-pitch — about Samantha Dravis' prior work experience. Specifically, Carper wrote he had been informed that Dravis "did not attend work or preform her duties for much if not all of the months of November 2017 - January 2018." Read it here.

AD-ING IT UP: American Bridge is also launching new digital ads focused on Pruitt's "corrupt spending." The ads will run on Twitter and will target those tweeting about Pruitt, directing them to their petition page.

202 AND YOU: The president promised a crowd in West Virginia Thursday he'd review the use of emergency authority to prop up coal and nuclear power plants, a provision referred to as Section 202c of the Federal Power Act. "We'll be looking at that 202. You know what a 202 is? We'll be looking at that," Trump said. "We're trying. Nine of your people just came up to me outside, 'Could you talk about 202?' We'll be looking at that as soon as we get back." The use of the provision has resurfaced after Ohio-based FirstEnergy Solutions submitted an unusual request to the Energy Department just before it filed for bankruptcy protection, asking that department to use its authority to provide four-year contracts to many coal and nuclear power plants in the PJM Interconnection. Read more here from Pro's Eric Wolff.

WIND POWERS ZINKE REMARKS: Interior Secretary Ryan Zinke will speak at noon today about U.S. offshore wind initiatives at the International Offshore Wind Partnering

AMERICAN OVERSIGHT

Forum in Princeton, N.J. Bureau of Ocean Energy Management's program manager of offshore renewable energy, James Bennett will speak at the forum earlier in the day about the agency's thoughts on offshore wind in the Atlantic. "We want the federal government to be our partners, and we are ready to work with Secretary Zinke, who recognizes offshore wind has become more valuable in terms of both environmental and economic benefits," said Liz Burdock, executive director of the Business Network for Offshore Wind, earlier this week.

GAO TELLS CONGRESS TO BAN COAL SELF-BONDING: Congress should pass a law barring coal companies from using "self-bonding" to ensure they will clean up old mine sites, according to a new report from the Government Accountability Office. Most coal-related financial assurances are done through surety bonds secured from other companies or by putting up collateral. But 12 percent of assurances in 2017, representing $1.2 billion, were done via self-bonding, in which a coal company essentially promises it has the money to cover clean-up costs, according to GAO's report.

Recent high-profile coal bankruptcies "have highlighted risks" that the Interior Department and the states face to be left holding the bag if coal companies go under without remediating their mines, GAO concluded. It's "a risk that may be greater today than when self-bonding was first authorized under" the Surface Mining Control and Reclamation Act of 1977, the agency added. Hardrock miners, the agency noted, were barred from self-bonding back in 2001.

MAIL CALL! Senate Energy and Natural Resources ranking member Maria Cantwell sent a letter Thursday to Zinke requesting he withdraw his park fee increase proposal. "I am unable to see how doubling or tripling a park entrance fee is anything other than an effort to exclude many Americans from enjoying their national parks," Cantwell wrote. The Associated Press reported earlier this week that the department was walking back the proposal after public outcry. Read Cantwell's letter here.

COME FOR THE CHERRY BLOSSOMS, STAY FOR THE OIL INFRASTRUCTURE? A 10-foot oil derrick and construction crew will be strategically placed on the National Mall today, to draw attention to potential drilling on public lands. The display comes via The Wilderness Society's "Too Wild to Drill" campaign. **If you go:** The display will be up on the Mall between 14th and 15th Streets from 10 a.m. to 4 p.m.

CfA SUES FOR TAR CREEK DOCS: The Campaign for Accountability filed a lawsuit against EPA on Thursday to force the agency to comply to a Freedom of Information Act request about a northeastern Oklahoma Superfund site. The lawsuit requests documents between officials at EPA and news organizations, including POLITICO, regarding the Tar Creek Superfund cleanup site. The site was the subject of a recent feature in POLITICO Magazine. Read the suit here.

— **The Renewable Fuels Association submitted FOIA requests** to EPA and DOE regarding waivers issued for small refineries from complying with the Renewable Fuel Standard. Read it here.

Stories from POLITICO Pro

Pruitt fell behind on payments for his $50-a-night condo rental Back

By Eliana Johnson and Andrew Restuccia | 04/05/2018 05:21 PM EDT

AMERICAN OVERSIGHT

Environmental Protection Agency chief Scott Pruitt was at times slow to pay the rent on his $50-per-night lease in a Capitol Hill condo, according to two people with knowledge of the situation — forcing his lobbyist landlord to pester him for payment.

Pruitt's living arrangement is the latest ethical issue to come under scrutiny by the EPA's inspector general's office, which said Thursday it's considering opening an investigation into Pruitt's lease arrangement — a move that would add to reviews of Pruitt's taxpayer-funded first-class travel, his use of special hiring authority to grant raises to aides and his spending on a soundproof phone booth for his office.

The EPA head was renting the condo from health care lobbyist Vicki Hart, whose husband, J. Steven Hart, is an energy lobbyist.

The cavalcade of problems has raised questions about Pruitt's future in the Trump administration.

Though President Donald Trump told reporters "I do, I do," when asked Thursday whether he had confidence in Pruitt, an administration official said the president has begun asking friends and advisers what he should do about the EPA chief.

On his way back from an event in West Virginia, Trump said he was considering how to respond to reports about Pruitt's activities. "I have to look at them," Trump said. "I'll make that determination."

But the president said repeatedly that he thinks Pruitt has done "a fantastic job."

"I think he's a fantastic person," Trump added. "I just left coal and energy country. They love Scott Pruitt. They feel very strongly about Scott Pruitt, and they love Scott Pruitt."

Trump's conservative outside advisers have been mounting a defense of the EPA chief, urging the president not to succumb to what they argue is an unfair pile-on by the media.

White House officials, conscious of how quickly the president's mind can change about defending or dismissing top advisers, have avoided publicly making any definitive statements about how long Pruitt will remain in his job. "I can't speak to the future of Scott Pruitt," White House spokesman Hogan Gidley said Thursday. "If the president has confidence in somebody, they stay."

But behind the scenes, White House officials are frustrated with the way Pruitt has handled the crisis. While in many cases, the president has unilaterally dismissed Cabinet members and senior advisers against the advice of his top aides, Pruitt's situation is a rare instance in which the president has remained loyal longer than other members of the White House staff, who are eager to see Pruitt gone.

West Wing frustration with Pruitt spiked after a Fox News interview on Wednesday that one White House official called a "disaster."

AMERICAN OVERSIGHT

Trump, who watched the interview, was said to be unhappy with Pruitt's performance, the aide said, adding that the EPA chief appeared to be unprepared for tough questions from Fox News correspondent Ed Henry.

Pruitt, for his part, has gotten conflicting messages from the White House.

During a phone call on Monday, Trump encouraged Pruitt to defend himself after the EPA chief complained that the press was out to get him, according to a person familiar with the conversation — which Pruitt interpreted as a green light from Trump to do a series of media interviews in a bid to tamp down the scandals engulfing him.

But Kelly and other White House officials have found Pruitt's efforts at a response to be lackluster and counterproductive. Kelly called Pruitt after Wednesday's Fox News interview to discourage him from doing more press.

In a separate phone call on Tuesday, Kelly pressed Pruitt about whether more damaging revelations were coming, the White House official confirmed. The Daily Beast first reported Kelly's comments. It is unclear how Pruitt responded, but the next day, The Atlantic broke the news that Pruitt circumvented the White House to grant raises to two employees.

And late Thursday, Pruitt faced a new batch of damaging reports, including one from The New York Times that detailed how at least five EPA officials were pushed out of their jobs or resigned after questioning the EPA chief's expensive spending habits.

Pruitt's lease agreement, first reported last week by Bloomberg News, has become a point of contention because political appointees sign an ethics pledge prohibiting them from accepting gifts from lobbyists — which would cover cut-rate lodging.

A lease agreement covering February through April 2017 indicated Pruitt's rent was "payable on the 1st day of each month, in installments of $500 on March 1, 2017 and any remaining balance on April 1, 2017 based on days of actual occupancy," according to a memo obtained by the Campaign Legal Center.

Had Pruitt stayed in the condo every night in a given month, he would have owed $1,500 — but canceled checks reviewed by Bloomberg show Pruitt made a payment of $1,700 on Sept. 1, suggesting he eventually paid his back rent.

A spokesman for Pruitt declined to comment.

The uncertainty about Pruitt's fate comes in the wake of Trump's successive dismissals last month of Secretary of State Rex Tillerson, national security adviser H.R. McMaster and Veterans Affairs secretary David Shulkin.

His situation may more closely resemble that of former "Apprentice" contestant Omarosa Manigault, who was fired in December of last year despite the president's initial objections after

AMERICAN OVERSIGHT

Kelly convinced him that her abuse of a White House car service, among other things, was a scandal in the making.

Pruitt was among a handful of Cabinet-level officials slapped on the wrist last month by Kelly, who called him into the White House to drill home the notion that — legality aside — "optics matter." CNN first reported on the meeting.

Pruitt has made clear he wants to keep fighting. He pushed back on allegations in the interview with Fox News on Wednesday. In the interview, Pruitt described his housing arrangement as "an Airbnb situation" and said EPA ethics officials had signed off on it.

An EPA ethics official clarified later Wednesday that he had concluded only that the $50-per-night lease did not constitute an improper gift but did not investigate whether Pruitt's arrangement ran afoul of other ethics rules.

Asked by Fox whether renting a room from a Washington lobbyist was inconsistent with Trump's promise to drain the swamp, Pruitt replied: "I don't even think that that's even remotely fair to ask that question."

Trump: Pruitt's 'done an incredible job' Back

By Kelsey Tamborrino | 04/05/2018 05:17 PM EDT

President Donald Trump today praised Scott Pruitt but said he would look into reports of ethics questions that have been raised about the EPA administrator.

"I think he's done an incredible job," Trump said of Pruitt, according to a pool report. "He's been very courageous. It hasn't been easy, but I think he's done a fantastic job."

Pruitt has come under scrutiny for a slew of reports concerning a $50-per-night condo he rented from a lobbyist last year, as well as previous questions surrounding his travel costs and security spending. When asked about the reports today, Trump suggested he had not read all the details.

"I have to look at them," Trump told reporters aboard Air Force One. "I'll make that determination. But he's a good man."

The president was returning from an event in White Sulphur Springs, W.Va., on the recent tax cuts, where he said the residents were in support of Pruitt.

"You know, I just left coal and energy country," Trump said. "They love Scott Pruitt. They feel very strongly about Scott Pruitt."

Third Republican calls on Pruitt to resign Back

By Alex Guillén | 04/05/2018 03:34 PM EDT

Rep. Elise Stefanik (R-N.Y.) today called on EPA Administrator Scott Pruitt to resign, becoming at least the third Republican to do so even as more conservative lawmakers come to Pruitt's defense.

"I'm going to make news today," Stefanik said at a town hall meeting in South Glens Falls, about 45 miles north of Albany, according to The Saratogian. "I think Scott Pruitt should resign. I fundamentally disagree with how Pruitt has handled the EPA."

Reps. Carlos Curbelo and Ileana Ros-Lehtinen, both Florida Republicans, earlier this week called for Pruitt's ouster, as have a number of Democrats. Pruitt is facing increased scrutiny for ethics issues including the $50-per-night rent he paid to rent space in a condo from a lobbyist last year.

Meanwhile, conservative Republicans like Sens. Rand Paul (R-Ky.) and Ted Cruz (R-Texas) have come to Pruitt's defense today.

"Why do Obama and his media cronies want so badly to drive @EPAScottPruitt out of office?" tweeted Cruz.

Pruitt "is likely the bravest and most conservative member of Trump's cabinet," tweeted Paul. "We need him to help @realDonaldTrump drain the regulatory swamp."

Democrats ask EPA IG to expand probe into hiring authority to cover aides' raises Back

By Alex Guillén | 04/05/2018 05:10 PM EDT

Two Senate Democrats today asked EPA's inspector general to expand an existing investigation into Administrator Scott Pruitt's use of a special hiring authority to look into allegations that two aides brought with him from Oklahoma received large raises via that authority.

The Atlantic first reported this week that Sarah Greenwalt and Millan Hupp were both denied

AMERICAN OVERSIGHT

large raises by the White House, but that they later received them via special authority that allows Pruitt to make hires via the Safe Drinking Water Act.

Pruitt said Wednesday on Fox News that he had no knowledge of the raises, and was looking into the matter.

In a letter to EPA's IG, Sens. Tom Carper (D-Del.) and Sheldon Whitehouse (D-R.I.) write that if Pruitt's statement to Fox News is accurate, then one or more EPA officials acted without his knowledge. "This could indicate a serious breakdown of internal controls on the appropriate use of this authority," they wrote. "If Pruitt's statements were false, then the SDWA hiring authority may have been intentionally abused under the direction of the Administrator to award large raises to favored aides."

EPA's IG in January announced an investigation into whether Pruitt used the SDWA hiring authority to shield political appointees from the Trump administration's ethics pledge.

EPA inspector general reviewing allegations around Pruitt rental Back

By Alex Guillén | 04/05/2018 09:04 AM EDT

EPA's inspector general is reviewing requests to investigate Administrator Scott Pruitt's $50-a-night lease agreement, a spokesman confirmed today — an initial step before determining whether to launch a formal probe.

Democrats from the House and Senate this week called on the IG to review Pruitt's rental of a room in a condo co-owned by the wife of a lobbyist with energy clients.

There are already three other IG investigations underway into Pruitt's specific activities at EPA. The IG is also investigating his travel, his use of a special Safe Drinking Water Act hiring authority and his spending on a soundproof phone booth for his office.

WHAT'S NEXT: It is unclear how long the IG will review the allegations before determining whether to open an investigation into the apartment lease. IG probes often take months to complete.

Top Pruitt policy aide Samantha Dravis resigns Back

AMERICAN OVERSIGHT

By Emily Holden and Daniel Lippman | 04/05/2018 09:05 AM EDT

Samantha Dravis, senior counsel and associate administrator of EPA's Office of Policy, submitted her resignation early last week, according to a source familiar with her plans.

People close to the situation said she had been planning to leave for some time, and that her decision is not because of a series of recent negative headlines for Administrator Scott Pruitt, including news that he rented a $50-a-night condo from a lobbyist and clarification from an ethics official late last night that he didn't have all the facts when he suggested the deal might not violate rules.

Dravis is one of Pruitt's top aides and she had been tasked with numerous new responsibilities, including a regulatory reform task force, and the offices for environmental reviews and environmental justice.

Dravis, who previously was policy director and general counsel of the Republican Attorneys General Association, will pursue opportunities in the private sector.

Trump in West Virginia promises review of emergency authority for power plants Back

By Eric Wolff | 04/05/2018 03:30 PM EDT

President Donald Trump told a crowd in West Virginia today that he'd review the use of emergency authority to prop up coal and nuclear power plants.

Trump said he would review the use of Section 202c of the Federal Power Act, a provision that can be used to keep power plants running that are in danger of retiring. The president was at an event in White Sulphur Springs, W. Va., promoting last year's tax cuts.

"We'll be looking at that 202. You know what a 202 is? We'll be looking at that," he told the crowd. "We're trying. Nine of your people just came up to me outside, 'Could you talk about 202?' We'll be looking at that as soon as we get back."

FirstEnergy Solutions, an Ohio utility company, submitted an unusual request to the Department of Energy last week — days before the company filed for bankruptcy protection — asking that DOE use its authority to provide four-year contracts to as many as 85 coal and nuclear power plants in the PJM Interconnection, a power market consisting of 13 mid-Atlantic and rust belt states.

DOE rejected a request from FES, a subsidiary of the regulated utility FirstEnergy Corp., to use

AMERICAN OVERSIGHT

that authority last year, and FERC rejected a rule proposed by Energy Secretary Rick Perry that would have benefited FES in January.

Alex Guillén contributed to this report

The Environmental Scandal in Scott Pruitt's Backyard Back

By Malcolm Burnley | 12/06/2017 05:57 PM EDT

PICHER, Okla. — Tar Creek, Oklahoma, is breathtaking in a terrible way: At one time the world's deepest source of lead and zinc, the three-town region is now a cratered landscape so poisonous that no one, aside from 10 holdouts, can live there. Mountains of ashlike "chat," a toxic residue from lead-zinc milling, rise majestically among the remains of homes torn from their foundations. Abandoned pets forage around the ruins. A child's teddy bear lies sprawled in a ghostly living room. A gorilla statue fronts an empty high school, atop a sign proclaiming "1A Football State Champs, 1984."

Tar Creek is also part of the environmental legacy of one of the state's—and nation's—leading politicians, Senator Jim Inhofe, and his longtime ally, Scott Pruitt, the former Oklahoma attorney general who is now head of President Donald Trump's Environmental Protection Agency. After the EPA struggled to clean up the area, in 2006, Inhofe endorsed a plan in which a trust overseen by local citizens would use federal dollars to purchase homes and businesses in the toxic region so residents could move elsewhere. Then, when the plan proved so problematic that it spawned more than a half-dozen civil lawsuits and an audit into possible criminal wrongdoing, Pruitt, as the state's attorney general, invoked an exception to state freedom-of-information laws to keep the audit from being an open public record.

Now, that decision is coming into new light as many Oklahomans clamor for the audit to be released, suggesting that its revelations will prove embarrassing to Inhofe, who played a key role in designing the buyout plan, and cast doubt on Pruitt's decision not to move forward with charges. Last week, a Washington, D.C., nonprofit called Campaign for Accountability raised the stakes even further, filing suit in Oklahoma courts to force the release of the audit.

"If you take a look at Scott Pruitt's record, you see a general disregard for transparency," said Daniel Stevens, the group's executive director. "I don't think it's outside our bounds to say that Pruitt is trying to hide evidence of criminal wrongdoing."

Pruitt, in an interview, dismissed the idea that he was covering up anything, saying his former office's grand jury unit reviewed the audit and determined that no charges were warranted. He said he declined to make it public because he didn't want innocent people to be besmirched, even though the auditor rejected that reasoning and maintained it should be a public document. "It was

AMERICAN OVERSIGHT

important to protect the individuals' reputation that were in that investigation," Pruitt said.

Nonetheless, the mess at Tar Creek continues to follow Pruitt in other ways. As EPA administrator, he has assumed full responsibility for the still-faltering cleanup. And eyebrows were raised in Oklahoma this past January when, as Pruitt was awaiting confirmation for his EPA post, a White House spokesperson told Bloomberg News that the handling of Tar Creek was emblematic of Pruitt's philosophy: "national standards, neighborhood solutions."

Pruitt, in the interview, said he knew nothing about the Bloomberg article, saying only that he endorses the EPA's current work at Tar Creek and the principle of combining federal resources and state and local leadership, rather than the buyout that occurred before his time as EPA administrator, while he was Oklahoma's attorney general.

"I think as far as a model going forward outside of the buyout, what we're trying to do is have a renewed focus on what I think are some of the most beneficial things we can do for citizens across the country, and that's to address some of these legacy sites that have substantial environmental challenges that allow them to once again enjoy the communities in their backyard," he said.

But many residents of the Tar Creek area, who gave up their homes in a buyout they considered both coercive and corrupt, continue to blame Pruitt for the fact that no one was prosecuted. They described a program so rife with good-old-boy corruption that certain individuals received outsize payoffs while some homeowners got so little they couldn't relocate anywhere nearby; meanwhile, they said, the people hired to demolish the homes received inflated contracts through a flawed process.

"We were lied to and deceived from Day One," said Gloria Workman, who said her son has learning disabilities from growing up in the polluted zone of Tar Creek, which had lead-poisoning levels in children that were three times higher than those registered in Flint, Michigan, during the peak of its recent water crisis. "Not only were we losing our homes, we were raped in the process."

"It was a nightmare," said Mary Thompson, who was still awaiting a resolution from the trust when an EF4 tornado ripped through Tar Creek in 2008, throwing bodies and trailers through the sky, killing six people and destroying more than 100 homes. Without homes, many people took lower-than-expected buyout offers—however insufficient they were perceived to be—because they had nothing left, she said.

"They preyed on us after the tornado," said Thompson, whose home was leveled.

Nonetheless, Inhofe, in a 2015 news release touting the completion of the buyout, cast it as a success because it did not lead to an expanded federal role.

"This is an example of a government program created for a specific purpose and then dissolves after the job is completed," Inhofe proclaimed.

AMERICAN OVERSIGHT

Now, he continues to defend it but sounds less celebratory. "The first thing to know about the Superfund site at Tar Creek is that it's what's called a 'mega-site' and that it is an exceptional circumstance in every way. You can't compare it to any other Superfund site in the country," Inhofe said in a statement to POLITICO. "The voluntary relocation assistance to get people out of harm's way was right for the situation at Tar Creek, but may not be for every other Superfund—that is why state and local partnership is critical."

To many former residents, who still want the investigative report by the state auditor to see the light of day, even these modest and conditional endorsements feel like slaps in the face.

"People hate the government out here, and it's because of things like this," said Aletha Redden, a lifelong resident of the area who has a Donald Trump bumper sticker on her pickup truck. "I want Scott Pruitt to know: This is not the model."

***

A flat expanse of dusty roads and scrubby vegetation situated in the heart of Tornado Alley, the Tar Creek area was once the mainstay of the Quapaw Tribe, which was forcibly relocated there by the U.S. government in 1834. At the time, the territory had little economic value, but a half-century later, prospectors discovered enormously rich ore. By the turn of the 20th century, companies broke ground with drill rigs on Quapaw land.

Many of those firms made fortunes, luring white settlers into an uneasy state of coexistence with the Quapaw. Tar Creek proved to be the deepest reservoir of lead-zinc ore in the world, producing a whopping $1 billion in minerals between 1908 and 1950, according to the Oklahoma Historical Society. Picher, the largest of the mining towns, swelled to a population of 14,000.

Almost every aspect of life in Tar Creek traced back to the mines. The high school took on the mascot of a gorilla, a reference to workers in the mines who broke up boulders with hammers. Children played in sandboxes filled with chat, the chalky mining debris. Teenagers earned the nickname "chat rats" for climbing up the pillowy piles of toxic rubble throughout town and rolling tires down their slopes.

By the end of World War II, however, the boom was over. Most of the mining companies decamped for richer pastures. For the families left behind—including that of Yankees slugger Mickey Mantle, who grew up in the Tar Creek area in the 1940s—it was a slowly unfolding disaster. The extent of Tar Creek's collapse was reflected in the words of John F. Kennedy, who barnstormed into Joplin, Missouri—25 miles away from Tar Creek—in the closing days of the 1960 presidential campaign.

"My own judgment is I know no tougher occupation in the world that [sic] to be a miner, lead, zinc, coal. I am always glad to meet them because I think they live with peril," Kennedy declared. "They have as tough a life as there is. Every other one whose hand you shake has a finger off, a foot crushed, the chances of in 20 years their having a bad accident are more than any of the rest of us. And yet in this community and in West Virginia and Idaho and in other sections of the United States, there has been no group that has been harder hit, no group that has

AMERICAN OVERSIGHT

been more forgotten."

Indeed, after the last prospector looking for ore packed up and left in the mid-1970s, people looked to casinos and farming to make a living. But the residue from decades of mining was poisoning them. In 1979, acid mine water leached into the ground, threatening the area's aquifers, killing fish and turning creeks a rusty orange color. When the federal Superfund program—designed to clean up the nation's most polluted and contaminated land—kicked off in the early 1980s, Tar Creek was named to the inaugural National Priorities List. It's still on the list.

The EPA has spent more than $176 million over the past 25 years on cleanup work inside the 42-square-mile-area, on projects from plugging mine shafts to removing contaminated surface soil in people's yards. Though the amount of money sounds large, it hasn't been nearly enough to remove the toxic dangers, and many residents insist the cleanup was mishandled from the get-go. In some cases, the removal of soil resulted in sloping yards, which, during bouts of rain, caused flooding and mold inside houses. In 2000, the FBI raided the offices of the EPA's prime contractor at Tar Creek, Morrison-Knudsen. The company later settled a lawsuit brought by the federal government alleging false representation of billing and progress reports for a sum of $1 million. In the settlement, the company made no admission of wrongdoing.

Meanwhile, the environmental hazards began to multiply: Shortly after the start of that Superfund spending spree, in 1993, researchers at the University of Oklahoma found that 34 percent of Quapaw children were living with lead concentrations above the federal limit. Further studies found alarming rates of lead and arsenic in both the tribal and non-tribal populations. In 1997, a university-led study estimated that 21 percent of children near Tar Creek had elevated blood-lead levels (defined as 10 micrograms per liter at the time), which is three times higher than the highest measurements found in Flint, Michigan, in 2015. The learning disabilities and memory loss that had plagued the schools and curtailed lifespans for decades suddenly had a culprit.

As the dangers became ever-more visible and the cleanup lagged, residents rallied around the idea that the government should quickly buy them out of their homes, rather than wait for the hazardous materials to be removed. They thought they might have an ally in the state's senior senator, Inhofe, a Republican who was chair of the Senate Environment and Public Works Committee. But Inhofe, who has a skepticism about environmental science that exceeds that of any of his colleagues, refused to consider the idea. "There will never be a buyout. I promise you that," Inhofe told the *Tulsa World* in late 2003.

Inhofe's refusal to take action of any sort was often criticized in local press, due in part to the relentless attacks of a young Democratic congressman named Brad Carson. "If you'd asked people in Oklahoma politics at the time, they'd say we were mortal enemies," said Carson, referring to himself and Inhofe. "I was elected [to Congress] in 2000, and my goal was to untie the Gordian knot. The area is desperately poor. If it was in suburban Tulsa or Oklahoma City, there would've been outrage."

In 2004, Governor Brad Henry signed a bill authorizing the use of state dollars for the relocation

AMERICAN OVERSIGHT

of roughly 100 families with children under the age of 6. Under pressure to take further action, the senior senator began to come around. At first, he secured $2 million in federal funding to pay for a study that discovered that 286 homes within Tar Creek were at risk of being swallowed up from cave-ins of underground mine shafts. This provided an opportunity for Inhofe to reverse himself on the buyout, supporting it on the grounds of protecting residents from cave-ins.

"The stability with the underground mine workings was worse than anyone had previously been thought," recalls Ed Keheley, a retired nuclear engineer and native of Picher who co-authored the study's final report. In the spring of 2006, Inhofe announced a joint federal and state buyout program that would begin with $20 million in funding, with the express purpose of relocating any and all people who'd voluntarily leave Tar Creek.

Having once opposed the buyout to his political detriment, Inhofe now used his clout to keep on funding it, but with the idea that decision-making would be concentrated among local leaders, not the federal government. With Inhofe's support, the Oklahoma legislature created a nine-member panel called the Lead Impacted Communities Relocation Assistance Trust to assume control over the project. The members were all volunteers, helping their community, but some had a vested interest in the buyout: They included, for example, a local banker whose institution would later give loans to people to help them relocate; local property owners whose own homes—and those of relatives—would be subject to the buyout; town officials; and a leader of the Quapaw Tribe.

Inhofe cast himself in the role of the community's protector, putting out a 2008 campaign ad that declared: "Tar Creek: poisoned earth, the threat of schools and churches sinking into abandoned mines. Everyone thought it would be too much to tackle, except for one stubborn man named Inhofe."

But over a five-year period, the buyout would become the subject of a host of civil lawsuits and the subject of a state investigation.

***

The local members of the trust—few, if any, of them schooled in environmental management—had two major tasks: figuring out how much each property owner should be paid for their home or business, and then choosing a company to demolish the properties. Both tasks would become the subject of complaints about cronyism, with residents saying the trust members rewarded their friends and politically connected individuals.

It didn't help that the trust often met behind closed doors, and that the vice chairman of the trust resigned within a year. The trust's sole employee, operations manager Sonya Harris, also quit, declaring in her resignation letter that she could no longer continue "with a clear conscience without recommending a change; I will not place myself in a position to be perceived as approving of the operations to this point."

The first case to raise eyebrows involved the mayor of Picher, Ernest "Sam" Freeman. In 2005, when the buyout was first being discussed as a probability, he acquired three large parcels of

AMERICAN OVERSIGHT

former mining land covered with chat from the Picher Development Authority, which he chaired. Freeman bought them at 3 cents per square foot, for a total price of $2,088.50, according to the findings of a state audit at the time. It was, the audit declared, a violation of state laws forbidding members of public boards from entering into contracts with those boards. Ottawa County District Attorney Eddie Wyant called on Freeman to return the properties to the development authority in lieu of charges.

"If Sam wanted to buy that land, he needed to get off the board and purchase it legally," Wyant told a local newspaper at the time. "I am not one to put anyone in jail over this, but he needs to clear it up." Wyant, when reached by phone, declined to comment further.

Freeman returned the land, but, in a move that enraged some neighbors, profited off it anyway. The trust had decided that, because so much former mining land had been taken over by state authorities and tribal members, those who owned mobile homes or other shelters on land they didn't own would be eligible for buyouts. Freeman made a claim based on the fact that he had been maintaining and renting out homes on the chat-infested property for years before he tried to buy it.

Trust documents show that Freeman received at least $274,000 from the buyout, more than half of which came from the same lots he had been ordered to return by law enforcement. (Freeman told POLITICO a payout of more than a quarter-million sounded accurate enough, though he declined to provide an exact figure.) Neighbors suspected cronyism. Freeman, who is no longer mayor, denied receiving any preferential treatment. "These people thought I bought the lots to make a killing in the buyout," he said. "I don't think I got more than anyone else would have."

The size of the mayor's profit diminished public confidence in the trust, just as it was engaged in the most delicate part of its task, figuring out how much to pay each individual property owner. Property owners were supposed to receive fair market prices as if pollution hadn't existed in Tar Creek, based on the sales of similar properties elsewhere in northeast Oklahoma. But those calculations appeared to lack uniformity.

The average payout for the 695 properties involved in the buyout was just over $65,000, but the disparity in prices between two properties could be dramatic. Residents complained about lowball offers on some decent properties and overly high payouts for others that were rundown or minuscule in size.

"I got $3,000 for my gun shop. It took me $16,000 to build it," said former Tar Creek resident John Frazier.

Wally Long said he and his wife got $35,000 for their Dairy Queen, while another Dairy Queen right up the road got substantially more.

"We were told [by the trust] that's all the money there is," Long said. "It bothered my wife a lot. She put 23 years of her life into this business."

Meanwhile, a trust member named Janell Trimble got $185,000 for her house, and her brother

AMERICAN OVERSIGHT

collected $115,000 for his fiberboard house.

"I may be a member of the [relocation trust's committee], but I honor my duties and I recuse myself when family members are involved," Trimble told the *Tulsa World* in 2008. "[B]ut as a buyout participant I also expect to be treated just like the next person."

Nonetheless, both Trimble and her brother received more than 35 percent above the average price per square foot. On the other end of the spectrum, an elderly woman named Betty Betts received an offer of $12,000 for her home; when she protested, the appraised value was raised to $20,000. Many people got so little for their homes that they had to turn around and take out loans in order to resettle elsewhere in Oklahoma. In the end, the trust finished up with millions in unspent funds.

Residents concentrated their anger on the company that the trust hired to conduct the appraisals, Cinnabar, which had previously made headlines for its management of a noise-insulation program at the Tulsa Airport, which involved multiple lawsuits . In response, the trust engaged an "appraisal reviewer" to go back over Cinnabar's work. But the reviewer, a company named Van Tuyl Associates, quickly came under criticism as well. "They [often] didn't get out of their car. They never entered these homes," said Keheley, who was a member of the trust at the time. (Van Tuyl Associates is now defunct; its former president could not be reached for comment.)

When the unrest over the buyout made the local newspapers, the trust's leadership pointed to a 95 percent acceptance rate for buyout offers. But some residents accused trustees of pressuring them with "take it or leave it" offers, according to a class-action lawsuit brought against the trustees, Cinnabar and Van Tuyl by more than 250 residents affected by the buyout. Plaintiffs also complained that they were denied the right to view the appraisal paperwork. There was even a fake camera—and posters notifying residents they were being videotaped—in the room where buyout offers were made, an apparent attempt to compel residents to take the offers, according to documents in the suit.

The suit, filed in Oklahoma district court, accused the defendants of cheating average property owners and rewarding friends and associates of the trustees. Depositions revealed an explanation for some of the inconsistencies in appraisals: For certain properties, Cinnabar expanded the boundaries of where it could find "comparables"—properties in adjacent counties whose sale prices were used to calculate the appraisals—with the approval of a state employee named J.D. Strong, who, according to the lawsuit, played a significant role in overseeing the trust.

One of the properties appraised in this fashion was that of Trimble, whose $185,000 payout, according to appraisal documents, had infuriated other residents.

When, in 2008, residents outlined their frustrations in a scathing six-page letter to Inhofe, Henry and other elected officials, Strong dictated the governor's reply, which was co-signed by Inhofe, lawyers for the plaintiffs asserted in his deposition. "I may have drafted this," Strong responded, when presented with a copy of the letter saved on Strong's computer.

In an interview, Strong defended the trust and its system of appraisals: "We knew going in that

AMERICAN OVERSIGHT

we weren't going to be the most popular. We went in with the idea that we were going to be fair. I can honestly say that, looking back, we were fair and unbiased and frugal."

During the six years the lawsuit was making its way through the state court system, both Cinnabar and Van Tuyl Associates declared bankruptcy. Eventually, the plaintiffs and the trust settled the case in 2015 for $1.3 million, which, after deducting attorney fees, meant that each resident ended up receiving an additional $2,600.

But that didn't satisfy many property owners.

"The people of Tar Creek were treated like second-class citizens, based on where they were born and lived," concluded Wally Kennedy, a columnist at the *Joplin Globe* who reported on northeast Oklahoma, including Tar Creek, for more than 30 years. "For someone to portray the buyout of the people of Tar Creek as a successful program is lying through their teeth."

***

Once the trust obtained the properties on the toxic land, the next problem was how to destroy the empty structures that were on them.

Inhofe made sure there was enough money for the job. Even as he joined fellow Republicans in condemning President Barack Obama's 2009 stimulus bill as an unwarranted giveaway, the senior senator helped secure an additional $15.7 million in the bill to help the trust finish its work.

The trust hired a local businessman named Jack Dalrymple to oversee bids for the demolition contract. He was best known for organizing an annual deer hunt for paralyzed veterans, an endeavor that earned him a lifetime achievement award from a local Chamber of Commerce. His payment was to be 10 percent of the value of the winning bid. He formulated a scoring system to evaluate bids and, in March 2010, the trust awarded the contract to Stone's Backhoe, which offered the most expensive of all four bids. At $2.1 million, Stone's bid was nearly four times that of the lowest bidder.

Just 14 days after Stone's was declared the winner, it asked that the contract be reassigned to two subcontractors, CWF Enterprises, a carpet-cleaning business, and Vision Construction and Management. Former residents contend that there were longstanding ties between Dalrymple and the subcontractors. Whether or not they were friends before, they soon became hunting buddies. In October 2012, local coverage of Dalrymple's annual event for paralyzed veterans pictured the heads of the two firms setting up the flag for the hunt.

One of the losing contractors filed suit against the trust and individual trustees in Oklahoma district court, accusing them of violating the state's open-meeting act and competitive bidding act. The district county judge sided with the plaintiff, reopening the bidding process.

But rather than blame Dalrymple, the trust gave him a new contract. It included a flat rate for his services, $305,472—about $100,000 more than he would have received had the contract

AMERICAN OVERSIGHT

remained with Stone's.

In January 2011, a $1.7 million demolition contract was awarded to none other than CWF Enterprises, the carpet-cleaning business, whose bid was also the least expensive of the three received. A month later, however, the estimated cost of the contract ballooned to $3,050,786—almost exactly 10 times what Dalrymple received in his new contract.

While many residents cried foul, Andy Lester, the trust's attorney, attributed the increase to the fact that the EPA-controlled repository for dumping debris had just closed down. Trekking the remains of the houses and businesses to a dumping ground further away caused the massive change order, and a near doubling of the contract.

Lester also defends the choice of Dalrymple to handle the bids, contending that he was an engineer with some prior experience with public contracts and that the trust members couldn't handle the process on their own.

"It is important to remember that the trust board consisted of nine members—including, for example, a physician, a school teacher, and a mushroom farmer. They were volunteers, not professionals at this kind of work," Lester said. "Jack Dalrymple is a professional engineer with significant experience. And candidly, there are very few professional engineers in northeast Oklahoma."

Nonetheless, lawyers out of the Tulsa region filed a lawsuit in 2012 under the False Claims Act that accused the trust members, Dalrymple and the heads of the companies hired to do demolition work of being part of a "good old boy network" and defrauding federal taxpayers.

Attorneys for the plaintiffs, Zach and Brad Barron, say the lawsuit fizzled when the Department of Justice took the stance that "the government didn't sustain damages" from the charges laid out in the complaint. In a false claims lawsuit, where the plaintiffs are effectively trying to recoup money that's owed to the government, a lack of willingness from the government is effectively a death knell, the Barrons said. The lawsuit was eventually dismissed.

In an interview, Dalrymple insisted the allegations of cronyism were entirely unfounded.

"There were a lot of emotions and feelings during that period," he said. "When you ask someone to leave their home, it's a tough thing. But ... there was nothing there."

***

Still, the drumbeat of complaints continued, eventually reaching the ear of Jerry Morris, the state director for Oklahoma's then-junior senator, Republican Tom Coburn.

It was no secret that Coburn, a physician who cast himself as a political outsider, didn't look upon Inhofe with any sort of fond feelings of mentorship.

"I think they were often seen as having very different approaches to politics," said David Blatt of

AMERICAN OVERSIGHT

the Oklahoma Policy Institute. "Inhofe is seen as a classic, pork-barrel politician who'd bring federal dollars to Oklahoma, the more the merrier." Whereas Coburn, Blatt says, "hated that kind of politics and did as little of it as he possibly could. In fact, he spoke disdainfully and caustically about it the whole time he was in the Senate."

Coburn was not shy about stepping on his fellow Republican's toes. Morris forwarded a memo with a lengthy list of allegations related to the awarding of contracts in the Tar Creek buyout, especially regarding the demolition work, to then-Attorney General Pruitt. In April 2011, Pruitt asked the state auditor and inspector, Gary Jones, to look into the memoranda sent from Coburn's office.

"I have determined that these concerns are serious in nature such that an investigation of the matter is warranted," Pruitt wrote to Jones. A 17-point list of allegations for Jones to investigate followed, including whether there was collusion between Dalrymple and the contractors hired to do the demolition work.

After spending almost two years on the investigation, Jones turned over the results of the audit to the attorney general's office in January 2014, apparently believing it had uncovered important information.

For a year and a half, the attorney general sat on the findings. Then, in May 2015, Pruitt announced that he wouldn't press charges. In addition, he vowed to keep the audit secret by refusing to release it.

Jones fired back at the attorney general's office days later, penning a letter to Pruitt that described his rationale for withholding the audit as "baffling."

"To our knowledge, the individuals named in the report are members of a public trust or contractor whose services were retained as part of this substantive project," Jones wrote. Further, he contended, "our office has received no inquiries from you or your staff regarding the content of the audit report."

Pruitt justified the secrecy by comparing the investigation results to the findings of a grand jury. "Specifically, our office is concerned about publication of unsubstantiated criminal allegations against private citizens," Pruitt wrote in a 2015 statement.

In the interview with POLITICO, Pruitt appeared to go one step further, suggesting the audit had in fact been vetted by a grand jury.

"You're addressing issues that it's been some months since I've looked into," Pruitt said. "I know the decision I made at that time was based upon the investigative audit. The investigative audit didn't yield anything to the grand jury, and, as such, it was important to protect the individuals' reputation that were in that investigation."

But when asked to clarify, a Pruitt staff member indicated that he was using the term "grand jury" as shorthand for the Multi-County Grand Jury Unit, a division of the AG's office, headed at

AMERICAN OVERSIGHT

the time by a Pruitt appointee, which decides whether to take cases to a grand jury for indictment.

It's not the same as a grand jury finding. Nonetheless, the attorney general's office, now overseen by Mike Hunter, Pruitt's former top deputy, has denied all open records requests for the audit, declaring it to be "under the supervision of the Multi-County Grand Jury Unit." A spokeswoman for the Oklahoma attorney general's office said that if there was in fact a grand jury, the office couldn't confirm or deny that.

These rationales befuddle open records experts.

"I don't think there's anything in the law that would prohibit it [the investigation] from being released," said Joey Senat of Oklahoma State University, the former president of FOIA Oklahoma. "The law doesn't require that the audit be kept secret. What would its release be harming? They've closed the investigation and decided not to prosecute."

Jones, who is now running for governor, reiterated his call for the attorney general's office to release the audit, saying in a statement that "regarding any investigation of this kind, we always err on the side of transparency and the people of Oklahoma have a right to know."

Concluded Senat: "When you have the state auditor [Gary Jones] saying these are not unsubstantiated claims and this is a serious problem, good government would call for letting the public know what happened and showing the public the audit. Transparency helps alleviate a lot of concerns about favoritism, corruption, and incompetency—if those are indeed unfounded."

***

Tar Creek today looks like an abandoned landfill. Illegal dumping has added a fresh layer of grime to the already ruined patch of earth. Giant craters from collapsed mine shafts, some as large as 200 feet in diameter, are filled with Bud Light cans, shotgun shells and the tangled remains of kids' playground equipment. "We call this urban renewal, Picher style," quipped former resident Gloria Workman.

Abandoned houses that were not part of the buyout are now coated with graffiti. The charred remains of the former mining museum in Picher, which burned down at the hands of arsonists, stands as a teetering monument to Tar Creek's former way of life. And the sense of danger and destruction extends beyond the former buyout area: On rainy days, local fields used for football practice bleed a toxic shade of orange.

The EPA is continuing its now 33-year-old cleanup effort, and it's thrust the Quapaws back into stewardship of the land. Although the tribe leased away or sold off significant chunks of Tar Creek to mining companies throughout the 20th century, the Quapaws have at least temporarily regained control of all of it. Since 2012, the tribe—a sovereign nation with roughly 5,500 members—has been the primary EPA contractor for environmental remediation at Tar Creek. It's the first time any tribe has been a prime contractor on a Superfund site, assigning all the contracts and overseeing all the work.

AMERICAN OVERSIGHT

"It's a great story," said Craig Kreman, assistant environmental director of the Quapaw tribe. "We're employing tribal members a lot of the time and members of the community. So that income [from the EPA contract] stays here in this community and is being spent in this community. We're not hiring a contractor out of Georgia."

Every day, a steady stream of trucks haul away more than 2,000 tons of soil saturated with cadmium, lead and other metals at the site. Each patch of earth requires years of passive soil treatments before it tests clean enough to plant row crops like winter wheat. Half-acre by half-acre, the hope is that Tar Creek can be put into productive agricultural use decades from now.

In August, after touring the abandoned area and surrounding towns, Pruitt's senior adviser Albert "Kell" Kelly, praised the EPA's efforts surrounding Tar Creek in sweeping terms: "People from all across the country count on the Superfund program to address pollution and revitalize their communities. Tar Creek cleanup is an excellent example of how the program should work. State and local partners, tribal partners, and EPA—all working together year after year to address historical pollution at this mega-site. It's cooperative federalism working at its best."

But many local observers, including Ed Keheley, aren't nearly as positive.

"Usually, the EPA comes in, they do their dirty work, sprinkle some wheat seed, take a picture to show Congress, and next year it looks like this," he said, pointing to a barren pasture. "Clearly, the EPA hasn't had the best interests of the people at heart. So I get personally offended when people like Scott Pruitt suggest otherwise."

For his part, Pruitt announced a fresh grant of $5 million to the Quapaw-led project last May, and he is quick to distance this experiment in local control from the one that preceded it.

"We [the EPA] can't impact the buyout. We didn't authorize the buyout. I didn't manage the buyout and its unique situation," Pruitt said. "I think what's most tangible is what we can do together with the tribe to advance and continue remediation."

When asked to respond to the undying complaints of residents in rural Ottawa County, where Tar Creek is located—a county in which Trump received 71 percent of the vote in November 2016—Pruitt changed the subject. "I had no experience with Tar Creek, to be honest with you," he said.

That's true, except it was his office's decision, when he was attorney general, not to prosecute the people accused of mishandling the trust money, Keheley and other local residents point out.

But what galls them more than the failure to prosecute is the failure to release the results of a government investigation—an audit that they believe will raise questions about Pruitt's unwillingness to press charges and cast a negative light on a project near and dear to Inhofe's heart.

Pruitt's connections to Inhofe are extensive. One of Pruitt's first hires as EPA chief was Ryan

AMERICAN OVERSIGHT

Jackson, a longtime Inhofe staffer and the senator's point person on Tar Creek, who is now Pruitt's chief of staff. He also brought on four other former aides to Inhofe, the Senate's leading proponent of the idea that man-made pollution contributing to climate change is a conspiracy and a hoax. Three of them are Pruitt's senior advisers on air, climate and legal issues.

"It gives me a level of comfort to know that we have a bureaucracy that's actually going to be serving instead of ruling," Inhofe told the *Washington Post*, applauding Pruitt for hiring his staff.

Numerous veteran Oklahoma political watchers, some of whom spoke to POLITICO on condition of anonymity, suggest that there may be an ulterior motive in Pruitt's embrace of Inhofe: It's widely believed that Pruitt, who is 49, wants to run for Inhofe's seat when the senator retires. Many observers think Inhofe is unlikely to seek reelection in 2020, when he'll be 85. And some have noted that Pruitt's decision not to advance the case against the buyout trust spared Inhofe the embarrassment of seeing the program he personally tailored and promoted go down in scandal.

"Pruitt is a rising Republican political star previously in Oklahoma and now nationally," said one journalist who closely follows the Oklahoma political scene. "There have been rumblings that Pruitt might have his eye on higher office. ... Pruitt would do everything to keep Inhofe close, assuming he wants to run for that seat."

Joplin Globe columnist Wally Kennedy, who has covered the Tar Creek trust more closely than any other journalist, said, "My sense of the way that unfolded was that Pruitt decided he was not going to do any kind of prosecution, and then Inhofe writes a letter saying what an outstanding job the trust did. My reaction was 'Huh?'"

"The fact that the audit was not publicly disclosed tells me that somebody is hiding something," he added. "This is Oklahoma taxpayers' money being committed to ratting out what appears to be some apparent corruption. But everybody looks the other way. That's why I'm talking to you. Because if you can shed a light on this, maybe somebody will say 'We need to take a second look at this.'"

Pruitt, however, insists his decisions were strictly based on the law, and an Inhofe staffer flatly dismissed the possibility of Inhofe influencing Pruitt's decision.

"Senator Inhofe would have had no involvement in the case or in any of then-Attorney General Pruitt's decisions," the staffer said.

Pruitt was similarly bemused by the idea that there would have been any sort of political calculation behind his decision to shield the audit. The only politics in this case, he suggested, was on the part of those who want to embarrass him and Inhofe.

"You would think that this wouldn't be a political issue, that people wouldn't put on the red and blue jerseys," Pruitt said in frustration.

Others argue that transparency in this case is not a political issue as much as a legal right.

AMERICAN OVERSIGHT

"The open records act seems pretty clear this audit should be released," said Stevens, executive director of Campaign for Accountability. "You have to ask why he's not releasing it? Pruitt should have to be held accountable for this."

Reuters: Exclusive: Trump's EPA aims to replace Obama-era climate, water regs in 2018

A top EPA priority for 2018 is to replace the Obama-era Clean Power Plan which would have slashed carbon emissions from power plants. The U.S. Environmental Protection Agency will replace Obama-era carbon and clean water regulations and open up a national debate on climate change in 2018, part of a list of priorities for the year that also includes fighting lead contamination in public drinking water.

NewsOK: Contaminated Eagle Industries site in Midwest City added to EPA priorities list

A contaminated industrial site along Midwest City's border with Oklahoma City was added Tuesday to the Environmental Protection Agency's national priorities list for Superfund site. The designation signifies the site is one of the nation's most severely polluted parcels of land. Soil and groundwater around the former Eagle Industries property at 10901 SE 29th St. are contaminated with trichloroethylene and dichloroethane, according to Oklahoma Department of Environmental Quality investigators.

Miami News Record: Tar Creek Superfund Site Makes Pruitt's Priority List

The Tar Creek Superfund Site made U.S. EPA Administrator Scott Pruitt's list of Superfund Sites Targeted for Immediate and Intense Action, but no commitment of additional funding is associated with the site's inclusion on the list. The Tar Creek Superfund Site is included on a list of 21 sites across the nation making the list. The EPA considered sites that could benefit from Pruitt's direct engagement and sites that have identifiable actions to protect human health and the environment.

Exclusive: Trump's EPA aims to replace Obama-era climate, water regs in 2018

By: Valerie Volcovici and David Shepardson, 1/9/18

A top EPA priority for 2018 is to replace the Obama-era Clean Power Plan which would have slashed carbon emissions from power plants

AMERICAN OVERSIGHT

The U.S. Environmental Protection Agency will replace Obama-era carbon and clean water regulations and open up a national debate on climate change in 2018, part of a list of priorities for the year that also includes fighting lead contamination in public drinking water.

The agenda, laid out by EPA Administrator Scott Pruitt in an exclusive interview with Reuters on Tuesday, marks an extension of the agency's efforts under President Donald Trump to weaken or kill regulations the administration believes are too broad and harm economic growth, but which environmentalists say are critical to human health.

"The climate is changing. That's not the debate. The debate is how do we know what the ideal surface temperature is in 2100?... I think the American people deserve an open honest transparent discussion about those things," said Pruitt, who has frequently cast doubt on the causes and implications of global warming.

Pruitt reaffirmed plans for the EPA to host a public debate on climate science sometime this year that would pit climate change doubters against other climate scientists, but he provided no further details on timing or which scientists would be involved.

Pruitt said among the EPA's top priorities for 2018 will be to replace the Clean Power Plan, former President Barack Obama's centerpiece climate change regulation which would have slashed carbon emissions from power plants. The EPA began the process of rescinding the regulation last year and is taking input on what should replace it.

"A proposed rule will come out this year and then a final rule will come out sometime this year," he said. He did not give any details on what the rule could look like, saying the agency was still soliciting comments from stakeholders.

He said the agency was also planning to rewrite the Waters of the United States rule, another Obama-era regulation, this one defining which U.S. waterways are protected under federal law. Pruitt and Trump have said the rule marked an overreach by including streams that are shallow, narrow, or sometimes completely dry - and was choking off energy development.

AMERICAN OVERSIGHT

Pruitt said that in both cases, former President Barack Obama had made the rules by executive order, and without Congress. "We only have the authority that Congress gives us," Pruitt said.

Pruitt's plans to replace the Clean Power Plan have raised concerns by attorneys general of states like California and New York, who said in comments submitted to the EPA on Tuesday that the administrator should recuse himself because as Oklahoma attorney general he led legal challenges against it.

BIOFUELS AND STAFF CUTS

Pruitt said he hoped for legislative reform of the U.S. biofuels policy this year, calling it "substantially needed and important" because of the costs the regulation imposes on oil refiners.

The Renewable Fuel Standard, ushered in by former President George W. Bush as a way to help U.S. farmers, requires refiners to blend increasing amounts of biofuels like corn-based ethanol into the nation's fuel supply every year.

Refining companies say the EPA-administered policy costs them hundreds of millions of dollars annually and threatens to put some plants out of business. But their proposals to change the program have so far been rejected by the Trump administration under pressure from the corn lobby.

The EPA in November slightly raised biofuels volumes mandates for 2018, after previously opening the door to cuts.

The White House is now mediating talks on the issue between representatives of both sides, with input from EPA, and some Republican senators from states representing refineries are working on possible legislation to overhaul the program.

AMERICAN OVERSIGHT

Pruitt said he also hoped Congress could produce an infrastructure package this year that would include replacing municipal water pipes, as a way of combating high lead levels in certain parts of the United States.

"That to me is something very tangible very important that we can achieve for the American people," he said.

Pruitt added that EPA also continuing its review of automobile fuel efficiency rules, and would be headed to California soon for more meetings with the California Air Resources Board to discuss them.

California in 2011 agreed to adopt the federal vehicle emission rules through 2025, but has signaled it would opt out of the standards if they are weakened – a move that would complicate matters for automakers serving the huge California market.

In the meantime, Pruitt said EPA is continuing to reduce the size of its staff, which fell to 14,162 employees as of Jan. 3, the lowest it has been since 1998, under Ronald Reagan when the employment level was 14,400. The EPA employed about 15,000 when Obama left office.

Nearly 50 percent of the EPA will be eligible to retire within the next five years, according to the agency.

Contaminated Eagle Industries site in Midwest City added to EPA priorities list

By: Justin Wingerter, 1/9/18

AMERICAN OVERSIGHT

A contaminated industrial site along Midwest City's border with Oklahoma City was added Tuesday to the Environmental Protection Agency's national priorities list for Superfund site.

The designation signifies the site is one of the nation's most severely polluted parcels of land. Soil and groundwater around the former Eagle Industries property at 10901 SE 29th St. are contaminated with trichloroethylene and dichloroethane, according to Oklahoma Department of Environmental Quality investigators.

"Groundwater resources at the site and the surrounding area are threatened by the contamination," the EPA wrote in a memo Tuesday. "(Trichloroethylene) has been found in off-site private drinking water wells. The site is an area of recharge for the Central Oklahoma aquifer system, which is a major source of groundwater in Central Oklahoma."

Contamination at Eagle Industries was first discovered in 2003. The company, which had dumped contaminants in violation of state law, closed in 2010 without paying a fine.

The EPA announced in early August it would consider adding Eagle to its national priorities list at the request of Gov. Mary Fallin. Several months of public comment followed, leading to Tuesday's announcement.

“Once again, Administrator (Scott) Pruitt is making it clear that he's focused on protecting the environment by partnering with states to clean up contaminated sites in local communities," said U.S. Sen. Jim Inhofe, R-Tulsa.

"By adding the Eagle Industries site in Oklahoma City to the National Priorities List, it will give the site increased attention for long-term clean-up efforts and focus on revitalizing the area for development and economic activity," he added.

The adverse public health ramifications of Eagle's illegal actions have not dissipated. Trichloroethylene, or TCE, has been found within nearby residential water wells. State investigators distributed a fact sheet to residents that stated TCE “may cause nervous system

AMERICAN OVERSIGHT

effects, liver and lung damage, abnormal heartbeat, coma and possibly death."

"It is clear that the TCE is migrating, with the likelihood of affecting approximately 30 additional residences and businesses," stated an internal DEQ memo obtained by The Oklahoman in an open records request. "Eagle Industries lies in Midwest City. The plume of pollution is flowing into Oklahoma City."

On Tuesday, the EPA wrote, "There are currently no readily available alternative drinking water sources for the 18 family homes south of Eagle Industries."

"Today's action ensures the necessary resources are available for effective and safe revitalization of some of the most contaminated sites across the country," Pruitt said in a statement.

EPA cleanup efforts could eventually extend to a second Eagle site, where the company operated for decades, beginning in 1957. Since an investigation by The Oklahoman found Eagle employees may have also dumped trichloroethylene at the site, 8828 SE 29th St., state investigators and Midwest City have agreed to test the soil and groundwater there. The property is owned by Midwest City.

Rita Kottke, an environmental programs director at DEQ, told Midwest City council members last month that EPA headquarters in Washington had shown an interest in the 8828 site. The EPA contacted DEQ and pushed them to conduct environmental testing, the first step in the Superfund process, according to Kottke.

When soil and groundwater tests are complete in the coming months, several outcomes are possible. The tests could find no cause for concern, allowing Midwest City to develop the 8828 site and attract a grocery store or other retail opportunity. The tests could find minor contamination curative with soil extraction and other actions. Or the tests could find dire contamination requiring massive EPA action.

Miami News Record

AMERICAN OVERSIGHT

http://www.miamiok.com/news/20180109/tar-creek-superfund-site-makes-pruitts-priority-list

Tar Creek Superfund Site Makes Pruitt's Priority List

By: Melinda Stotts, 1/9/18

The Superfund list came in direct response to the EPA's Superfund Task Force Recommendations issued in July of 2017.

MIAMI – The Tar Creek Superfund Site made U.S. EPA Administrator Scott Pruitt's list of Superfund Sites Targeted for Immediate and Intense Action, but no commitment of additional funding is associated with the site's inclusion on the list.

The Tar Creek Superfund Site is included on a list of 21 sites across the nation making the list.

The EPA considered sites that could benefit from Pruitt's direct engagement and sites that have identifiable actions to protect human health and the environment.

The listed sites require timely resolution of specific issues to expedite cleanup and redevelopment efforts, according to the EPA's press release, and the list is designed to spur action at sites where opportunities exist to act quickly and comprehensively.

The Superfund list came in direct response to the EPA's Superfund Task Force Recommendations issued in July of 2017.

According to the EPA, Pruitt will receive regular updates on the listed sites, but the EPA remains dedicated to addressing the risks of all Superfund sites.

AMERICAN OVERSIGHT

There are currently more than 1,300 Superfund sites on EPA's National Priorities List at various stages in the cleanup process

The Task Force recommendations are aimed at expediting cleanup at all sites and Pruitt has set the expectation of a renewed focus on accelerating work and progress.

The list released on Dec. 8 includes the following U.S. Superfund Sites Mohawk Tannery in Nashua, New Hampshire, Centredale Manor Restoration Project in North Providence in Rhode Island, American Cyanamid Co. in Bound Brook, New Jersey, Diamond Alkali Co. (aka Upper Lower Passaic) Newark, New Jersey, Ventron/Velsicol (aka Berry's Creek) in Wood Ridge Borough, New Jersey, L.A. Clarke & Son in Spotsylvania, Virginia, B.F. Goodrich in Calvert City, Kentucky, Mississippi Phosphates Corporation in Pascagoula, Mississippi, U.S. Smelter and Lead Refinery Inc. (aka USS Lead or East Chicago) in East Chicago, Indiana, Allied Paper Inc./Portage Creek/Kalamazoo River in Kalamazoo, Michigan, Tar Creek (Ottawa County) in Ottawa County, Oklahoma, San Jacinto Waste Pits in Channelview, Texas, Des Moines TCE (aka Dico Company) in Des Moines, Iowa, West Lake Landfill in Bridgeton, Missouri, Bonita Peak Mining District in San Juan County, Colorado, Anaconda Co. Smelter in Anaconda, Montana, Silver Bow Creek/Butte Area I Butte, Montana, Orange County North Basin in Fullerton, California, Anaconda Copper Mine in Lyon County, Nevada, Portland Harbor in Portland, Oregon and Quendall Terminal in Renton, Washington.

All 21 sites have been designated the nation's Superfund sites for years, some for decades. Tar Creek was first officially designated a Superfund in 1983.

Millions and millions, well over $300 million, of federal funding has been expended for cleanup and buyout of the Tar Creek Superfund Site which continues today and is expected to continue for more decades to come.

Pruitt is a former Oklahoma state senator and served the state as attorney general before his nomination by President Trump to the EPA and confirmation to the post in February of 2017.

During his time serving as Oklahoma's attorney general Pruitt refused to release the state audit conducted regarding the Lead-Impacted Communities Relocation Trust (LICRAT), a Public Trust and Agency of the State of Oklahoma buyout of the Tar Creek Superfund Site despite the

AMERICAN OVERSIGHT

objection of other state officials.

A non-profit Washington, DC watchdog group, Campaign for Accountability (CfA) filed a lawsuit in the District Court of Oklahoma in November of 2017 against Oklahoma Attorney General Mike Hunter and Oklahoma State Auditor and Inspector Gary Jones for failing to release copies of audits and documents related to corruption allegations associated with the management of the Tar Creek Reclamation site in the state, according to their press release.

"While he was serving as the Attorney General of Oklahoma, EPA Administrator Scott Pruitt declined to bring criminal charges in response to an audit that found evidence of criminal wrongdoing at the Tar Creek Reclamation site," said CfA Executive Director Daniel E. Stevens in a press release issued by Nov. 27, 2017, by CfA. "Why did he refuse to bring charges? We don't know because the Oklahoma Attorney General's office has repeatedly refused to release documents related to this audit."

Pruitt claimed if released the information in the audit might unfairly embarrass private civilians.

Times Free Press

http://www.timesfreepress.com/news/breakingnews/story/2018/jan/09/local-site-proposed/460875/

Local site proposed for list of country's most toxic places

By: Mark Pace, 1/9/18

A local site composed of residential properties, including areas used by children, has been proposed to be put on a list of the country's most toxic places.

The Southside Chattanooga Lead Site is one of 10 sites across the country recommended to be

AMERICAN OVERSIGHT

added to the Superfund Program's National Priorities List by the Environmental Protection Agency.

"The priority for proposing the Site is protecting children by identifying and cleaning up lead-contaminated soil at residential properties and other areas where children may be present," according to a release from the EPA.

The site site located where waste material was used in past decades as fill or top soil in Alton Park, Cowart Place, Jefferson Heights, Richmond and the Southside Gardens areas in the southwestern portion of Chattanooga.

Lead levels at the site were detected above health-based benchmarks. The EPA will work with other groups and agencies to clean the site and replace it with clean soil.

Sites are added to the National Priorities List when contaminants are considered threats to human health and the environment.

The move is another step in EPA Administrator Scott Pruitt's goal to identify and the clean toxic sites. The announcement comes on the heels of a targeted campaign for "immediate and intense attention" to clean and restore 21 sites in the U.S.

US News

https://www.usnews.com/news/best-states/michigan/articles/2018-01-09/michigan-sets-standard-for-chemical-contaminant-in-water

Michigan sets standard for chemical contaminant in water

By: David Eggert, AP, 1/9/18

AMERICAN OVERSIGHT

Michigan regulators on Tuesday set a state threshold for chemicals that were once widely used and are being found in drinking water, a move they said will let them issue violation notices and take legal action if needed.

The announcement is the latest as Republican Gov. Rick Snyder's administration scrambles to combat potential health risks in tap water that stem from the chemicals used in firefighting, waterproofing, carpeting and other products.

The combined standard for perfluorooctanoic acid and perfluorooctanesulfonic acid is 70 parts per trillion. That mirrors a federal advisory level set in 2016.

"This new standard allows us to take regulatory enforcement actions, something we have not been able to do absent a state criterion," Michigan Department of Environmental Quality Director Heidi Grether said in a statement. "This means we will now have tools to mandate a responsible party conduct activities to address PFOA and PFOS contamination, thereby reducing risk to human health and the environment."

The expectation is that parties will voluntarily comply with clean up criteria, she said.

Per- and polyfluoroalkyl substances, or PFAS, have been detected at military bases, water treatment plants and, most recently, an old industrial dump site for footwear company Wolverine World Wide. The contaminants, classified by the U.S. Environmental Protection Agency as "emerging" nationally, have sparked enough concern that Snyder in November created a state response team and last month enacted $23 million in emergency spending passed by the Legislature.

The chemicals were used in scores of industrial applications and have been detected in human and animal blood around the world. The Agency for Toxic Substances and Disease Registry said scientists are uncertain about how they affect human health at exposure levels typically found in food and water. But some studies suggest the chemicals might affect fetal development, disrupt hormonal functions, damage fertility and immune systems, and boost the risk of cancer.

AMERICAN OVERSIGHT

At least 1,000 homes with private wells in the Plainfield Township area north of Grand Rapids, near where Wolverine dumped hazardous waste decades ago, have been tested for PFAS contamination in recent months.

Also Tuesday, Snyder announced the creation of two advisory committees to the response team.

One, to be led by Dr. David Savitz of Brown University, will review the science and make recommendations within six months — including potentially a stricter state PFAS standard. Democrats are proposing legislation to establish a 5 parts per trillion limit, which would be the country's toughest guidelines.

The other advisory committee will focus on the public health impact of the contamination and be led by Dr. Eden Wells, Michigan's chief medical executive.

She has been charged with involuntary manslaughter, obstruction of justice and lying to an investigator as part of a criminal investigation of Flint's water crisis, but Snyder has stood behind her. In November, he appointed her to lead a new Public Health Advisory Council.

Newark Post

http://www.newarkpostonline.com/news/epa-adds-contaminated-newark-site-to-superfund-list/article_bd185770-1678-57de-91c0-40f653ecd7af.html

EPA adds contaminated Newark site to Superfund list

By: Josh Shannon, 1/9/18

The Environmental Protection Agency has agreed to add a site in Newark to the National Priorities List – a list of contaminated sites eligible for remedial action financed under the federal Superfund program.

AMERICAN OVERSIGHT

"Today's action ensures the necessary resources are available for effective and safe revitalization of some of the most contaminated sites across the country," EPA Administrator Scott Pruitt said in a prepared statement.

The agency will conduct a remedial investigation and feasibility study to determine the extent of contamination and evaluate various cleanup options, a spokesperson said.

City and state officials first asked for federal help investigating the cause of groundwater pollution in 2016.

The issue involves the area surrounding the city's South Well Field, located on a narrow property off South Chapel Street, between Brookside and Scottfield. Water from the South Well Field feeds the southern part of the city, roughly as far north as Kells Avenue. The northern part of the city gets its water from White Clay Creek and the Newark Reservoir.

Nearly 20 years ago, city officials noticed volatile organic compounds (VOCs) – including chemicals commonly found in dry cleaning solvents and other industrial solvents and degreasers – seeping into the water and installed a treatment system in 2003. The chemicals are toxic but are easily removed in treatment, according to Tom Coleman, acting city manager for the city of Newark.

"It's been in place since 2003, and we don't have any problem treating it," Coleman explained in 2016. "It's just an expense."

Coleman emphasized that treatment eliminates the VOCs from the water.

"Our water is safe, has been safe and will continue to be safe," he said.

AMERICAN OVERSIGHT

The Delaware Department of Natural Resources and Environmental Control has been studying the cause of the pollution but has been unable to pinpoint the source.

The contamination is believed to be in two groundwater plumes. One is beneath Pencader Plaza, the Blue Hen Industrial Park and homes around Scottfield Drive. The second is beneath a portion of the Diamond State Industrial Park along Bellevue Road.

Officials believe the VOCs may have come from industrial chemicals used or spilled in the industrial parks.

A year ago, the EPA conducted preliminary tests at monitoring wells in Brookside and Scottfield, as well as in the commercial areas along South Chapel Street. The agency was testing for "vapor intrusion," which is the migration of VOCs from contaminated groundwater into nearby buildings through openings in the building foundation.

The study found the concentration of VOCs does not present a vapor intrusion concern to nearby residents and businesses.

Los Angeles Times

http://www.latimes.com/local/lanow/la-me-ln-rainfall-mudflow-20180109-story.html

At least 13 dead as heavy rains trigger flooding, mudflows and freeway closures across Southern California

By: James Queally, Joseph Serna, Michael Livingston and Ruben Vines, 1/9/18

At least 13 people were killed Tuesday when a rainstorm sent mud and debris coursing through Montecito neighborhoods and left rescue crews to scramble through clogged roadways and

AMERICAN OVERSIGHT

downed trees to search for victims.

The deluge that washed over Santa Barbara County early Tuesday was devastating for a community that was ravaged by the Thomas fire only a few weeks earlier. In just a matter of minutes, pounding rain overwhelmed the south-facing slopes above Montecito and flooded a creek that leads to the ocean, sending mud and massive boulders rolling into residential neighborhoods, according to Santa Barbara County Fire Department spokesman Mike Eliason.

At least 25 other people were injured, authorities said at an afternoon press conference. Crews rescued 50 people by air and dozens more from the ground.

"It's going to be worse than anyone imagined for our area," Eliason said in a phone interview Tuesday. "Following our fire, this is the worst-case scenario."

The deaths came after a heavy band of rain struck around 2:30 a.m., causing "waist-high" mudflows, Eliason said.

Late Tuesday, about 300 people remained stuck in their homes in Montecito's Romero Canyon neighborhood after impassable roads halted rescue operations, officials said.

First-responders plan to launch aerial rescues at daybreak for those residents, all of whom are safe.

"So far there isn't a concern about anybody being in any potential danger in that area," said Rosie Narez, a spokeswoman for the multi-agency storm response. "There's no way in or out, so I mean, at some point … you're going to run out of stuff, so you're going to need help."

Authorities said the residents are in a mandatory evacuation zone.

AMERICAN OVERSIGHT

The mudslide struck a section of the city that is south of the Thomas fire's burn area and was not subject to a mandatory evacuation, Eliason said. Rescue personnel have yet to even make it north of Highway 192, which is closer to soil scorched by last month's wildfire. Burned areas are less capable of absorbing water, making them even more susceptible to flooding and mudslides.

Officials had no estimate on how many people could be trapped or how many homes were damaged. The search for survivors was still underway Tuesday afternoon, with many places inaccessible.

Stationed in Hawaii for the Navy, Tyler McManigal, 28, was notified Tuesday that his father and brother were swept away by flooding in Montecito.

In a phone interview, he said he knew very little else about what happened.

McManigal said when the flash flood and mud flow began, his 64-year-old father, John, woke up and rushed over to wake up his brother, Connor, 23. The pair were unable to make it out of their home in the 300 block of Hot Springs Road, just north of Olive Mill Road.

The torrent of brown liquid mixed with branches, rocks, boulders and other debris carried away the family home — along with McManigal's brother and father.

"They found my brother probably three-quarters of a mile away, south of where the house is, on the 101 Freeway," he said, adding that Connor was taken to a local hospital.

"My brother is OK," he said.

But his father, who has six children, is yet to be found, said McManigal, who is trying to get

AMERICAN OVERSIGHT

back home.

The founder of St. Augustine Academy in Ventura was among those killed early Tuesday when a powerful mudslide swept him and his wife from their Montecito home.

Roy Rohter was identified by officials at Thomas Aquinas College, from which his daughter graduated in 2000. His wife, Theresa, was rescued and is in stable condition, officials said.

Friends remembered Rohter as an energetic leader and generous benefactor of the college.

“Roy Rohter was a man of strong faith and a great friend of Catholic education,” Michael F. McLean, president of the college, said in a statement posted on the school’s website. “He played a pivotal role in the lives of countless young Catholic students — students who came to a deeper knowledge and love of Christ because of his vision, commitment and generosity.”

Michael Van Hecke, headmaster of St. Augustine, said in a statement that Rohter “has done so much for so many people and pro-life and Catholic education causes. … Thousands have been blessed by the Rohters’ friendship and generosity.”

Emergency crews spent the first hours of light making rescues in voluntary evacuation zones near Montecito Creek north of U.S. 101.

In the 300 block of Hot Springs Road, crews rescued six people and a dog after four homes were destroyed. The mud lifted one home off of its foundation and carried it into trees, where it then collapsed, Eliason said. Firefighters used the jaws of life to cut their way into the home where a firefighter heard muffled cries for help from a 14-year-old girl, Eliason said.

A rescue dog pinpointed the girl’s location and two hours later, the mud-covered girl was pulled free. A second 14-year-old girl was also rescued from the same neighborhood and carried from ankle-high mud in a basket by half a dozen firefighters.

AMERICAN OVERSIGHT

The U.S. Coast Guard also sent rescue helicopters into the area Tuesday morning, hoisting several people from collapsed homes or rooftops that stood above swirling mud and water. Rescue personnel were also able to save a young boy who was swept more than half a mile south from his house after the building was lifted from its foundation in Montecito, authorities said.

The boy was found alive under a U.S. 101 overpass, authorities said. But his father remains unaccounted for.

On Hot Springs Road on Tuesday afternoon, a dozen sheriff's deputies carried a body on a gurney from a collapsed house as muddy water raced down the street. The deputies surrounded the body in silence for several moments before placing it gently into an emergency vehicle.

According to the National Weather Service in Los Angeles, the highest preliminary rainfall total appeared to register at roughly 5 inches in a gauge north of Ojai in Ventura County, in the burn area of the Thomas fire, which forced evacuations and destroyed homes last month. With heavy showers still forecast, flash flood warnings remained in effect for Santa Barbara County and southern Ventura County through Tuesday afternoon, according to the National Weather Service.

The 101 Freeway was shut down in both directions for more than 30 miles in the Thomas fire burn area because of flooding and debris flow, spanning an area from Santa Barbara to Ventura, according to the California Highway Patrol. Sections of routes 33 and 150 were also closed in Ventura County, according to the Sheriff's Department. There was no estimate for when the roadways might reopen, a California Department of Transportation spokesman said Tuesday afternoon.

In Los Angeles, one person was killed when a big rig overturned in the northbound lanes of the 5 Freeway near Los Feliz, said Saul Gomez, public information officer for the California Highway Patrol's Southern Division. All northbound lanes were closed as of 4 a.m., though Gomez said police were hoping to reopen the roadway by 8 a.m.

AMERICAN OVERSIGHT

The victim, who was not identified, was approximately 60 years old, Gomez said. No one else was injured. While the accident happened as rain fell across Los Angeles County, Gomez said he could not confirm the crash was storm-related.

The fatal crash was one of hundreds that occurred during the downpour. Between 5 and 9 a.m. Tuesday, there were 275 traffic collisions reported on Los Angeles-area freeways, the California Highway Patrol said. There were only 30 during the same time period a week ago.

Santa Barbara County officials evacuated nearly 7,000 residents from foothill communities shortly before the heaviest surge hit the area, according to Sheriff's Office spokeswoman Kelly Hoover.

About 3 a.m., she said, the storm became ferocious.

"We just had a deluge, a power surge of rain. And we had a report of a structure fire burning in the Montecito area, the San Ysidro area. And it just kept going downhill from there," she said. "We have people stuck in their homes, stuck in their cars. There's downed power lines, flooded roadways, debris."

Hoover said the shutdown of the 101 Freeway was heavily hindering rescue efforts.

"There's no way to get from Ventura here, no way for us to get south," Hoover said. "We're encouraging people to stay off the roads if they're in an evacuation area."

By 8:30 a.m., the county's dispatch center had at least 50 calls pending, she said.

Santa Barbara County officials put a boil water notice in effect for the entire Montecito Water District on Tuesday afternoon.

AMERICAN OVERSIGHT

In Los Angeles County, there was "mudslide activity" on Country Club Drive in Burbank, where police ordered evacuations of all homes east of Via Montana on Tuesday morning. The Police Department released footage of water surging across a roadway and urged people not to attempt to drive over it. Some vehicles were picked up and moved by the surge, and a few homes suffered minor damage, but no one had been injured as of 1 p.m., according to Sgt. Derek Green, a Burbank police spokesman.

The torrent of mud and debris sheared at least three fire hydrants, pumping another 130,000 gallons of water onto the debris flow, said Bill Mace, an assistant general manager of water systems for Burbank Water and Power. The department was able to cut off the pressure to each hydrant, but 14 homeowners will be without water for at least two days, Mace said.

Country Club Drive residents Allie Vonnacher, 17, and her mom, Heidi Donato-Fennell, 42, said they awoke to the site of several cars flowing down the street, along with power lines, trees and mailboxes.

"It's just surreal how powerful nature is," Donato-Fennell said. "You just hope it stays contained in the street and it doesn't become life-threatening."

Surges also washed out Topanga Canyon Boulevard north of Pacific Coast Highway, and sections of the 110 Freeway were closed because of flooding. The Los Angeles Fire Department had to launch a swift-water rescue to aid a man and a dog trapped in rising water near the Sepulveda Basin Recreation Area, and a Los Angeles police cruiser became mired in a debris flow on La Tuna Canyon Road, according to authorities. The officer was uninjured and walked out of the vehicle. The cruiser was in the process of being dug out of the mud with a backhoe early Tuesday.

International travelers arriving at Los Angeles International Airport also had to be diverted from Terminal 2 on Tuesday morning, after the customs area became flooded, the airport said on Twitter.

The CHP also said heavy rains likely contributed to a crash that left one person dead on Highway 126 in Ventura County, about two miles from the Los Angeles County line, on Monday

AMERICAN OVERSIGHT

afternoon. One woman died and two others were injured in the five-car crash, the agency said.

The National Weather Service was reporting rainfall totals of up to 5 inches in Ventura County and 3.3 inches in Santa Barbara County as of 11 a.m. Nearly 1½ inches of rain had fallen in Bel-Air, which could be susceptible to mudslides and debris flow because of damage caused by the Skirball fire last month.

The storm spared some areas that were affected by last month's blazes. Early Tuesday afternoon, evacuation orders for neighborhoods in the burn areas of the Creek and Fish fires were lifted, according to the Los Angeles County Sheriff's Department.

"I woke up ready this morning to laugh and scoff at all the gloom-and-doom predictions," said Dominic Shiach, 50. "It's actually way worse than I thought it was going to be."

Shiach wore a Navy raincoat as he walked Archie, his 3-year-old West Highland terrier, down Sycamore Canyon Road on Tuesday morning.

Amber Anderson with the Santa Barbara Incident Management Team said there were about 75 people who called for evacuation help.

Marc Phillips realized he should have listened to emergency officials as he trudged down East Valley Road in mud-soaked jeans.

"They were right," he said, pointing to a place where residences had been knocked from their foundations. "It looks like there was never a house there, but it was."

US Oks selling Japan missiles to shoot down North Korean missiles

By: Frank Miles, 1/9/18

The Trump administration has approved a $133.3 million missile defense sale to Japan to meet the escalating threat from North Korea — by shooting down the rogue nation's own ballistic missiles.

The State Department says Congress was notified Tuesday of the proposed sale of four missiles for the SM-3 Block IIA interceptor.

A State Department official told Fox News that, "Also included are four Mk 29 missile canisters, and other technical, engineering and logistics support services."

The department said the sale would support the U.S. defense industry and underscore Trump's commitment to improve the defense of allies threatened by North Korea.

The system was jointly developed by Japan and the U.S.

The missiles could be used at sea with Japan's current Aegis-equipped destroyers and with the land-based Aegis system its Cabinet approved for purchase last month.

That's intended to bolster Japan's current missile defense and perhaps curry favor with President Donald Trump who is eager for U.S. allies to buy more American military hardware.

"If concluded, this proposed sale will contribute to the foreign policy and national security interests of the United States," the State Department official told Fox News. "It will bolster the

AMERICAN OVERSIGHT

security of a major treaty ally that has been, and continues to be, a force for political stability and economic progress in the Asia-Pacific region. It will also improve (Japan Maritime Self-Defense Force's) interoperability with U.S. missile defense systems, and increase the protection for U.S. installations in the region."

Fox News previously reported that North Korea's weapons "are only aimed" at America and its territories, a regime official menacingly revealed during Tuesday's joint talks with South Korea — doubling down on Kim Jong Un's frequent threats to destroy the United States.

CNBC

China is reportedly thinking of halting US Treasury purchase and that's worrying markets right now

By: Fred Imbert, 1/10/18

China, the United States' biggest buyer of sovereign bonds, could be slowing down or even halting its purchases, according to a report.

Bloomberg News reported Wednesday, citing people familiar with the matter, that officials in Beijing have recommended the Chinese government lowers — or even stops — its buying of U.S. sovereign debt.

The report also notes that Chinese officials think U.S. debt is becoming less attractive compared to other assets, adding that trade tensions between the two countries could provide a reason to slow down or halt the purchases.

The news is worrying markets.

AMERICAN OVERSIGHT

Treasury prices fell, boosting yields. The U.S. dollar also fell vs. most currencies and gold increased.

Dow futures were down more than 110 points.

A taper in Chinese purchases would come as the Federal Reserve unwinds the massive balance sheet it amassed following the financial crisis. The Fed is also expected to raise rates three times this year. In 2017, the central bank also hiked rates three times.

The U.S. 10-year yield rose to 2.59 percent on Wednesday, hitting levels not seen since last March. The dollar also fell against a basket of major currencies, trading down 0.6 percent at 91.96.

Amid signs of a thaw in North Korea, Tensions bubble up

By: Gerald Seib, 1/9/18

A tentative move toward diplomacy over the confrontation with North Korea has begun, though that hardly means the tension is evaporating.

In a village on their heavily militarized border, North and South Korean officials opened talks Tuesday, ostensibly over possible North Korean participation in the coming South Korean Olympics. South Korea would like the talks to expand beyond that, toward finding broader ways to lower tensions.

AMERICAN OVERSIGHT

But as just one sign of how fraught the situation remains, simply consider this: U.S. officials are quietly debating whether it's possible to mount a limited military strike against North Korean sites without igniting an all-out war on the Korean Peninsula.

Senior officials from South and North Korea held their first formal face-to-face talks in two years on Tuesday, discussing Pyongyang's possible participation in the Winter Olympics and other issues in hopes of cooling tensions.

The idea is known as the "bloody nose" strategy: React to some nuclear or missile test with a targeted strike against a North Korean facility to bloody Pyongyang's nose and illustrate the high price the regime could pay for its behavior. The hope would be to make that point without inciting a full-bore reprisal by North Korea.

It's an enormously risky idea, and there is a debate among Trump administration officials about whether it is feasible. North Koreans have a vast array of artillery tubes pointed across the demilitarized zone at Seoul, the capital of South Korea, with which they could inflict thousands of casualties within minutes if they choose to unleash an all-out barrage.

Now, that danger is coupled with the risk that the North Koreans could attempt to use a nuclear weapon if they choose to escalate in retaliation against even a single strike.

Such a debate reflects how tense the situation remains, even though North Korea has scaled back the pace of its provocative actions in recent weeks and opened the door to diplomacy.

Tuesday's talks marked the first high-level dialogue between the Koreas in two years. After almost a year of regular provocations from North Korean leader Kim Jong Un, they are the first real sign that a diplomatic track is possible to begin de-escalating tensions over his nuclear and missile programs.

The U.S. and South Korea agreed on Thursday to delay their planned joint military exercises.

AMERICAN OVERSIGHT

The South Koreans are hosting the Olympics in February and want a period of calm and peace on the Korean Peninsula during that period. WSJ's Gerald F. Seib explains the short-term and long-term consequences of the delay.

A key question is whether the conversation can expand beyond the Olympics to include other topics Seoul wants to discuss, notably reunification of Korean families split between North and South, and a general lowering of hostility.

Even if that happens, though, the diplomatic move needed to really start dialing back tensions would be conversations between North Korea and the U.S. That possibility seems stuck in a long-distance dance between Pyongyang and Washington, with each side making opening bids the other finds unacceptable.

North Korea wants the U.S. to forswear joint military activities with South Korea in advance of talks, while the U.S. insists the goal of talks should be to eliminate North Korea's nuclear arsenal, not merely contain it. Each side finds the other's conditions unacceptable.

Indeed, diplomats suspect North Korea's engagement with South Korea is an attempt to drive a wedge between Seoul and its American allies, thereby reducing the possibility the U.S. could take any kind of military action against Pyongyang.

Efforts are under way to broaden the diplomatic opening beyond Tuesday's intra-Korean conversation. Jonathan Powell, a former chief of staff to British Prime Minister Tony Blair, has offered to help try to get broader conversations going, three people in the diplomatic community said.

And Jeffrey Feltman, an American diplomat now serving as U.N. under secretary-general for political affairs, recently traveled to North Korea to explore diplomatic possibilities. But Mr. Feltman returned alarmed at what he found in Pyongyang, where he sensed little interest in either talks with the U.S. or moving off the North's current nuclear track, say those who have talked with him.

Within the Trump administration, officials say, Secretary of State Rex Tillerson and Defense Secretary Jim Mattis remain focused on trying to get a broader diplomatic effort under way to

AMERICAN OVERSIGHT

rein in the North Korean nuclear program. National security adviser H.R. McMaster is arguing more vocally, publicly and privately, that military options need to be considered.

The wild card, as in all things in the Trump administration, is President Donald Trump himself. He signaled his own interest in a diplomatic track in the past. But he has also seemed to disavow Mr. Tillerson's overtures on negotiations. And his recent tweet—asserting he has a "bigger" nuclear button than does Mr. Kim—is, in the words of one experienced diplomat, the equivalent of "waving a red flag before a bull."

The U.S. hasn't done the kind of logistical preparations needed for a full-blown conflict on the Korean Peninsula. Still, as the talk of a "bloody nose" option suggests, that doesn't mean one can't happen.

Thanks to the Olympics and the intra-Korean diplomatic opening, the next few months figure to be relatively calm. But depending on whether the diplomatic opening widens or not, mid-2018 could be a time of reckoning.

EPA Morning News Highlights 01.10.18

Reuters: Exclusive: Trump's EPA aims to replace Obama-era climate, water regs in 2018
A top EPA priority for 2018 is to replace the Obama-era Clean Power Plan which would have slashed carbon emissions from power plants. The U.S. Environmental Protection Agency will replace Obama-era carbon and clean water regulations and open up a national debate on climate change in 2018, part of a list of priorities for the year that also includes fighting lead contamination in public drinking water.

NewsOK: Contaminated Eagle Industries site in Midwest City added to EPA priorities list
A contaminated industrial site along Midwest City's border with Oklahoma City was added Tuesday to the Environmental Protection Agency's national priorities list for Superfund site. The designation signifies the site is one of the nation's most severely polluted parcels of land. Soil and groundwater around the former Eagle Industries property at 10901 SE 29th St. are contaminated with trichloroethylene and dichloroethane, according to Oklahoma Department of Environmental Quality investigators.

Miami News Record: Tar Creek Superfund Site Makes Pruitt's Priority List
The Tar Creek Superfund Site made U.S. EPA Administrator Scott Pruitt's list of Superfund Sites Targeted for Immediate and Intense Action, but no commitment of additional funding is associated with the site's inclusion on the list. The Tar Creek Superfund Site is included on a list of 21 sites across the nation making the list. The EPA considered sites that could benefit from Pruitt's direct engagement and sites that have identifiable actions to protect human health and the environment.

Times Free Press: Local Site Proposed for List of Country's Most Toxic Places
A local site composed of residential properties, including areas used by children, has been proposed to be put on a list of the country's most toxic places. The Southside Chattanooga Lead Site is one of 10 sites across the country recommended to be added to the Superfund Program's National Priorities List by the Environmental Protection Agency.

US News: Michigan Sets Standard for Chemical Contaminant in Water
Michigan regulators on Tuesday set a state threshold for chemicals that were once widely used and are being found in drinking water, a move they said will let them issue violation notices and take legal action if needed. The announcement is the latest as Republican Gov. Rick Snyder's administration scrambles to combat potential health risks in tap water that stem from the chemicals used in firefighting, waterproofing, carpeting and other products.

Newark Post: EPA Adds Contaminated Newark Site to Superfund List
The Environmental Protection Agency has agreed to add a site in Newark to the National Priorities List – a list of contaminated sites eligible for remedial action financed under the federal Superfund program. The agency will conduct a remedial investigation and feasibility study to determine the extent of contamination and evaluate various cleanup options, a spokesperson said.

National Morning News Highlights 01.10.18

Los Angeles Times: At least 13 dead as heavy rains trigger flooding, mudflows and freeway closures across Southern California
At least 13 people were killed Tuesday when a rainstorm sent mud and debris coursing through Montecito neighborhoods and left rescue crews to scramble through clogged roadways and downed trees to search for victims. The deluge that washed over Santa Barbara County early Tuesday was devastating for a community that was ravaged by the Thomas fire only a few weeks earlier. In just a matter of minutes, pounding rain overwhelmed the south-facing slopes above Montecito and flooded a creek that leads to the ocean, sending mud and massive boulders rolling into residential neighborhoods, according to Santa Barbara County Fire Department spokesman Mike Eliason.

Exclusive: Trump's EPA aims to replace Obama-era climate, water regs in 2018

By: Valerie Volcovici and David Shepardson, 1/9/18

A top EPA priority for 2018 is to replace the Obama-era Clean Power Plan which would have slashed carbon emissions from power plants

The U.S. Environmental Protection Agency will replace Obama-era carbon and clean water regulations and open up a national debate on climate change in 2018, part of a list of priorities for the year that also includes fighting lead contamination in public drinking water.

The agenda, laid out by EPA Administrator Scott Pruitt in an exclusive interview with Reuters on Tuesday, marks an extension of the agency's efforts under President Donald Trump to weaken or kill regulations the administration believes are too broad and harm economic growth, but which environmentalists say are critical to human health.

"The climate is changing. That's not the debate. The debate is how do we know what the ideal surface temperature is in 2100?... I think the American people deserve an open honest transparent discussion about those things," said Pruitt, who has frequently cast doubt on the causes and implications of global warming.

Pruitt reaffirmed plans for the EPA to host a public debate on climate science sometime this year that would pit climate change doubters against other climate scientists, but he provided no further details on timing or which scientists would be involved.

Pruitt said among the EPA's top priorities for 2018 will be to replace the Clean Power Plan, former President Barack Obama's centerpiece climate change regulation which would have slashed carbon emissions from power plants. The EPA began the process of rescinding the regulation last year and is taking input on what should replace it.

"A proposed rule will come out this year and then a final rule will come out sometime this year," he said. He did not give any details on what the rule could look like, saying the agency was still soliciting comments from stakeholders.

He said the agency was also planning to rewrite the Waters of the United States rule, another Obama-era regulation, this one defining which U.S. waterways are protected under federal law. Pruitt and Trump have said the rule marked an overreach by including streams that are shallow, narrow, or sometimes completely dry - and was choking off energy development.

AMERICAN OVERSIGHT

Pruitt said that in both cases, former President Barack Obama had made the rules by executive order, and without Congress. "We only have the authority that Congress gives us," Pruitt said.

Pruitt's plans to replace the Clean Power Plan have raised concerns by attorneys general of states like California and New York, who said in comments submitted to the EPA on Tuesday that the administrator should recuse himself because as Oklahoma attorney general he led legal challenges against it.

BIOFUELS AND STAFF CUTS

Pruitt said he hoped for legislative reform of the U.S. biofuels policy this year, calling it "substantially needed and important" because of the costs the regulation imposes on oil refiners.

The Renewable Fuel Standard, ushered in by former President George W. Bush as a way to help U.S. farmers, requires refiners to blend increasing amounts of biofuels like corn-based ethanol into the nation's fuel supply every year.

Refining companies say the EPA-administered policy costs them hundreds of millions of dollars annually and threatens to put some plants out of business. But their proposals to change the program have so far been rejected by the Trump administration under pressure from the corn lobby.

The EPA in November slightly raised biofuels volumes mandates for 2018, after previously opening the door to cuts.

The White House is now mediating talks on the issue between representatives of both sides, with input from EPA, and some Republican senators from states representing refineries are working on possible legislation to overhaul the program.

Pruitt said he also hoped Congress could produce an infrastructure package this year that would include replacing municipal water pipes, as a way of combating high lead levels in certain parts of the United States.

"That to me is something very tangible very important that we can achieve for the American people," he said.

Pruitt added that EPA also continuing its review of automobile fuel efficiency rules, and would be headed to California soon for more meetings with the California Air Resources Board to discuss them.

California in 2011 agreed to adopt the federal vehicle emission rules through 2025, but has signaled it would opt out of the standards if they are weakened – a move that would complicate matters for automakers serving the huge California market.

In the meantime, Pruitt said EPA is continuing to reduce the size of its staff, which fell to 14,162 employees as of Jan. 3, the lowest it has been since 1998, under Ronald Reagan when the employment level was 14,400. The EPA employed about 15,000 when Obama left office.

Nearly 50 percent of the EPA will be eligible to retire within the next five years, according to the agency.

Contaminated Eagle Industries site in Midwest City added to EPA priorities list

By: Justin Wingerter, 1/9/18

A contaminated industrial site along Midwest City's border with Oklahoma City was added Tuesday to the Environmental

AMERICAN OVERSIGHT

Protection Agency's national priorities list for Superfund site.

The designation signifies the site is one of the nation's most severely polluted parcels of land. Soil and groundwater around the former Eagle Industries property at 10901 SE 29th St. are contaminated with trichloroethylene and dichloroethane, according to Oklahoma Department of Environmental Quality investigators.

"Groundwater resources at the site and the surrounding area are threatened by the contamination," the EPA wrote in a memo Tuesday. "(Trichloroethylene) has been found in off-site private drinking water wells. The site is an area of recharge for the Central Oklahoma aquifer system, which is a major source of groundwater in Central Oklahoma."

Contamination at Eagle Industries was first discovered in 2003. The company, which had dumped contaminants in violation of state law, closed in 2010 without paying a fine.

The EPA announced in early August it would consider adding Eagle to its national priorities list at the request of Gov. Mary Fallin. Several months of public comment followed, leading to Tuesday's announcement.

“Once again, Administrator (Scott) Pruitt is making it clear that he's focused on protecting the environment by partnering with states to clean up contaminated sites in local communities," said U.S. Sen. Jim Inhofe, R-Tulsa.

"By adding the Eagle Industries site in Oklahoma City to the National Priorities List, it will give the site increased attention for long-term clean-up efforts and focus on revitalizing the area for development and economic activity," he added.

The adverse public health ramifications of Eagle's illegal actions have not dissipated. Trichloroethylene, or TCE, has been found within nearby residential water wells. State investigators distributed a fact sheet to residents that stated TCE “may cause nervous system effects, liver and lung damage, abnormal heartbeat, coma and possibly death.”

“It is clear that the TCE is migrating, with the likelihood of affecting approximately 30 additional residences and businesses,” stated an internal DEQ memo obtained by The Oklahoman in an open records request. “Eagle Industries lies in Midwest City. The plume of pollution is flowing into Oklahoma City.”

On Tuesday, the EPA wrote, "There are currently no readily available alternative drinking water sources for the 18 family homes south of Eagle Industries."

“Today's action ensures the necessary resources are available for effective and safe revitalization of some of the most contaminated sites across the country,” Pruitt said in a statement.

EPA cleanup efforts could eventually extend to a second Eagle site, where the company operated for decades, beginning in 1957. Since an investigation by The Oklahoman found Eagle employees may have also dumped trichloroethylene at the site, 8828 SE 29th St., state investigators and Midwest City have agreed to test the soil and groundwater there. The property is owned by Midwest City.

Rita Kottke, an environmental programs director at DEQ, told Midwest City council members last month that EPA headquarters in Washington had shown an interest in the 8828 site. The EPA contacted DEQ and pushed them to conduct environmental testing, the first step in the Superfund process, according to Kottke.

When soil and groundwater tests are complete in the coming months, several outcomes are possible. The tests could find no cause for concern, allowing Midwest City to develop the 8828 site and attract a grocery store or other retail opportunity. The tests could find minor contamination curative with soil extraction and other actions. Or the tests could find dire contamination requiring massive EPA action.

AMERICAN OVERSIGHT

http://www.miamiok.com/news/20180109/tar-creek-superfund-site-makes-pruitts-priority-list

Tar Creek Superfund Site Makes Pruitt's Priority List

By: Melinda Stotts, 1/9/18

The Superfund list came in direct response to the EPA's Superfund Task Force Recommendations issued in July of 2017.

MIAMI – The Tar Creek Superfund Site made U.S. EPA Administrator Scott Pruitt's list of Superfund Sites Targeted for Immediate and Intense Action, but no commitment of additional funding is associated with the site's inclusion on the list.

The Tar Creek Superfund Site is included on a list of 21 sites across the nation making the list.

The EPA considered sites that could benefit from Pruitt's direct engagement and sites that have identifiable actions to protect human health and the environment.

The listed sites require timely resolution of specific issues to expedite cleanup and redevelopment efforts, according to the EPA's press release, and the list is designed to spur action at sites where opportunities exist to act quickly and comprehensively.

The Superfund list came in direct response to the EPA's Superfund Task Force Recommendations issued in July of 2017.

According to the EPA, Pruitt will receive regular updates on the listed sites, but the EPA remains dedicated to addressing the risks of all Superfund sites.

There are currently more than 1,300 Superfund sites on EPA's National Priorities List at various stages in the cleanup process

The Task Force recommendations are aimed at expediting cleanup at all sites and Pruitt has set the expectation of a renewed focus on accelerating work and progress.

The list released on Dec. 8 includes the following U.S. Superfund Sites Mohawk Tannery in Nashua, New Hampshire, Centredale Manor Restoration Project in North Providence in Rhode Island, American Cyanamid Co. in Bound Brook, New Jersey, Diamond Alkali Co. (aka Upper Lower Passaic) Newark, New Jersey, Ventron/Velsicol (aka Berry's Creek) in Wood Ridge Borough, New Jersey, L.A. Clarke & Son in Spotsylvania, Virginia, B.F. Goodrich in Calvert City, Kentucky, Mississippi Phosphates Corporation in Pascagoula, Mississippi, U.S. Smelter and Lead Refinery Inc. (aka USS Lead or East Chicago) in East Chicago, Indiana, Allied Paper Inc./Portage Creek/Kalamazoo River in Kalamazoo, Michigan, Tar Creek (Ottawa County) in Ottawa County, Oklahoma, San Jacinto Waste Pits in Channelview, Texas, Des Moines TCE (aka Dico Company) in Des Moines, Iowa, West Lake Landfill in Bridgeton, Missouri, Bonita Peak Mining District in San Juan County, Colorado, Anaconda Co. Smelter in Anaconda, Montana, Silver Bow Creek/Butte Area I Butte, Montana, Orange County North Basin in Fullerton, California, Anaconda Copper Mine in Lyon County, Nevada, Portland Harbor in Portland, Oregon and Quendall Terminal in Renton, Washington.

All 21 sites have been designated the nation's Superfund sites for years, some for decades. Tar Creek was first officially designated a Superfund in 1983.

Millions and millions, well over $300 million, of federal funding has been expended for cleanup and buyout of the Tar Creek Superfund Site which continues today and is expected to continue for more decades to come.

Pruitt is a former Oklahoma state senator and served the state as attorney general before his nomination by President Trump to the EPA and confirmation to the post in February of 2017.

AMERICAN OVERSIGHT

During his time serving as Oklahoma's attorney general Pruitt refused to release the state audit conducted regarding the Lead-Impacted Communities Relocation Trust (LICRAT), a Public Trust and Agency of the State of Oklahoma buyout of the Tar Creek Superfund Site despite the objection of other state officials.

A non-profit Washington, DC watchdog group, Campaign for Accountability (CfA) filed a lawsuit in the District Court of Oklahoma in November of 2017 against Oklahoma Attorney General Mike Hunter and Oklahoma State Auditor and Inspector Gary Jones for failing to release copies of audits and documents related to corruption allegations associated with the management of the Tar Creek Reclamation site in the state, according to their press release.

"While he was serving as the Attorney General of Oklahoma, EPA Administrator Scott Pruitt declined to bring criminal charges in response to an audit that found evidence of criminal wrongdoing at the Tar Creek Reclamation site," said CfA Executive Director Daniel E. Stevens in a press release issued by Nov. 27, 2017, by CfA. "Why did he refuse to bring charges? We don't know because the Oklahoma Attorney General's office has repeatedly refused to release documents related to this audit."

Pruitt claimed if released the information in the audit might unfairly embarrass private civilians.

Times Free Press

http://www.timesfreepress.com/news/breakingnews/story/2018/jan/09/local-site-proposed/460875/

Local site proposed for list of country's most toxic places

By: Mark Pace, 1/9/18

A local site composed of residential properties, including areas used by children, has been proposed to be put on a list of the country's most toxic places.

The Southside Chattanooga Lead Site is one of 10 sites across the country recommended to be added to the Superfund Program's National Priorities List by the Environmental Protection Agency.

"The priority for proposing the Site is protecting children by identifying and cleaning up lead-contaminated soil at residential properties and other areas where children may be present," according to a release from the EPA.

The site site located where waste material was used in past decades as fill or top soil in Alton Park, Cowart Place, Jefferson Heights, Richmond and the Southside Gardens areas in the southwestern portion of Chattanooga.

Lead levels at the site were detected above health-based benchmarks. The EPA will work with other groups and agencies to clean the site and replace it with clean soil.

Sites are added to the National Priorities List when contaminants are considered threats to human health and the environment.

The move is another step in EPA Administrator Scott Pruitt's goal to identify and the clean toxic sites. The announcement comes on the heels of a targeted campaign for "immediate and intense attention" to clean and restore 21 sites in the U.S.

US News

AMERICAN OVERSIGHT

https://www.usnews.com/news/best-states/michigan/articles/2018-01-09/michigan-sets-standard-for-chemical-contaminant-in-water

Michigan sets standard for chemical contaminant in water

By: David Eggert, AP, 1/9/18

Michigan regulators on Tuesday set a state threshold for chemicals that were once widely used and are being found in drinking water, a move they said will let them issue violation notices and take legal action if needed.

The announcement is the latest as Republican Gov. Rick Snyder's administration scrambles to combat potential health risks in tap water that stem from the chemicals used in firefighting, waterproofing, carpeting and other products.

The combined standard for perfluorooctanoic acid and perfluorooctanesulfonic acid is 70 parts per trillion. That mirrors a federal advisory level set in 2016.

"This new standard allows us to take regulatory enforcement actions, something we have not been able to do absent a state criterion," Michigan Department of Environmental Quality Director Heidi Grether said in a statement. "This means we will now have tools to mandate a responsible party conduct activities to address PFOA and PFOS contamination, thereby reducing risk to human health and the environment."

The expectation is that parties will voluntarily comply with clean up criteria, she said.

Per- and polyfluoroalkyl substances, or PFAS, have been detected at military bases, water treatment plants and, most recently, an old industrial dump site for footwear company Wolverine World Wide. The contaminants, classified by the U.S. Environmental Protection Agency as "emerging" nationally, have sparked enough concern that Snyder in November created a state response team and last month enacted $23 million in emergency spending passed by the Legislature.

The chemicals were used in scores of industrial applications and have been detected in human and animal blood around the world. The Agency for Toxic Substances and Disease Registry said scientists are uncertain about how they affect human health at exposure levels typically found in food and water. But some studies suggest the chemicals might affect fetal development, disrupt hormonal functions, damage fertility and immune systems, and boost the risk of cancer.

At least 1,000 homes with private wells in the Plainfield Township area north of Grand Rapids, near where Wolverine dumped hazardous waste decades ago, have been tested for PFAS contamination in recent months.

Also Tuesday, Snyder announced the creation of two advisory committees to the response team.

One, to be led by Dr. David Savitz of Brown University, will review the science and make recommendations within six months — including potentially a stricter state PFAS standard. Democrats are proposing legislation to establish a 5 parts per trillion limit, which would be the country's toughest guidelines.

The other advisory committee will focus on the public health impact of the contamination and be led by Dr. Eden Wells, Michigan's chief medical executive.

She has been charged with involuntary manslaughter, obstruction of justice and lying to an investigator as part of a criminal investigation of Flint's water crisis, but Snyder has stood behind her. In November, he appointed her to lead a new Public Health Advisory Council.

EPA adds contaminated Newark site to Superfund list
By: Josh Shannon, 1/9/18

The Environmental Protection Agency has agreed to add a site in Newark to the National Priorities List – a list of contaminated sites eligible for remedial action financed under the federal Superfund program.

"Today's action ensures the necessary resources are available for effective and safe revitalization of some of the most contaminated sites across the country," EPA Administrator Scott Pruitt said in a prepared statement.

The agency will conduct a remedial investigation and feasibility study to determine the extent of contamination and evaluate various cleanup options, a spokesperson said.

City and state officials first asked for federal help investigating the cause of groundwater pollution in 2016.

The issue involves the area surrounding the city's South Well Field, located on a narrow property off South Chapel Street, between Brookside and Scottfield. Water from the South Well Field feeds the southern part of the city, roughly as far north as Kells Avenue. The northern part of the city gets its water from White Clay Creek and the Newark Reservoir.

Nearly 20 years ago, city officials noticed volatile organic compounds (VOCs) – including chemicals commonly found in dry cleaning solvents and other industrial solvents and degreasers – seeping into the water and installed a treatment system in 2003. The chemicals are toxic but are easily removed in treatment, according to Tom Coleman, acting city manager for the city of Newark.

"It's been in place since 2003, and we don't have any problem treating it," Coleman explained in 2016. "It's just an expense."

Coleman emphasized that treatment eliminates the VOCs from the water.

"Our water is safe, has been safe and will continue to be safe," he said.

The Delaware Department of Natural Resources and Environmental Control has been studying the cause of the pollution but has been unable to pinpoint the source.

The contamination is believed to be in two groundwater plumes. One is beneath Pencader Plaza, the Blue Hen Industrial Park and homes around Scottfield Drive. The second is beneath a portion of the Diamond State Industrial Park along Bellevue Road.

Officials believe the VOCs may have come from industrial chemicals used or spilled in the industrial parks.

A year ago, the EPA conducted preliminary tests at monitoring wells in Brookside and Scottfield, as well as in the commercial areas along South Chapel Street. The agency was testing for "vapor intrusion," which is the migration of VOCs from contaminated groundwater into nearby buildings through openings in the building foundation.

The study found the concentration of VOCs does not present a vapor intrusion concern to nearby residents and businesses.

AMERICAN OVERSIGHT

At least 13 dead as heavy rains trigger flooding, mudflows and freeway closures across Southern California
By: James Queally, Joseph Serna, Michael Livingston and Ruben Vines, 1/9/18

At least 13 people were killed Tuesday when a rainstorm sent mud and debris coursing through Montecito neighborhoods and left rescue crews to scramble through clogged roadways and downed trees to search for victims.

The deluge that washed over Santa Barbara County early Tuesday was devastating for a community that was ravaged by the Thomas fire only a few weeks earlier. In just a matter of minutes, pounding rain overwhelmed the south-facing slopes above Montecito and flooded a creek that leads to the ocean, sending mud and massive boulders rolling into residential neighborhoods, according to Santa Barbara County Fire Department spokesman Mike Eliason.

At least 25 other people were injured, authorities said at an afternoon press conference. Crews rescued 50 people by air and dozens more from the ground.

"It's going to be worse than anyone imagined for our area," Eliason said in a phone interview Tuesday. "Following our fire, this is the worst-case scenario."

The deaths came after a heavy band of rain struck around 2:30 a.m., causing "waist-high" mudflows, Eliason said.

Late Tuesday, about 300 people remained stuck in their homes in Montecito's Romero Canyon neighborhood after impassable roads halted rescue operations, officials said.

First-responders plan to launch aerial rescues at daybreak for those residents, all of whom are safe.

"So far there isn't a concern about anybody being in any potential danger in that area," said Rosie Narez, a spokeswoman for the multi-agency storm response. "There's no way in or out, so I mean, at some point … you're going to run out of stuff, so you're going to need help."

Authorities said the residents are in a mandatory evacuation zone.

The mudslide struck a section of the city that is south of the Thomas fire's burn area and was not subject to a mandatory evacuation, Eliason said. Rescue personnel have yet to even make it north of Highway 192, which is closer to soil scorched by last month's wildfire. Burned areas are less capable of absorbing water, making them even more susceptible to flooding and mudslides.

Officials had no estimate on how many people could be trapped or how many homes were damaged. The search for survivors was still underway Tuesday afternoon, with many places inaccessible.

Stationed in Hawaii for the Navy, Tyler McManigal, 28, was notified Tuesday that his father and brother were swept away by flooding in Montecito.

In a phone interview, he said he knew very little else about what happened.

McManigal said when the flash flood and mud flow began, his 64-year-old father, John, woke up and rushed over to wake up his brother, Connor, 23. The pair were unable to make it out of their home in the 300 block of Hot Springs Road, just north of Olive Mill Road.

The torrent of brown liquid mixed with branches, rocks, boulders and other debris carried away the family home — along with McManigal's brother and father.

AMERICAN OVERSIGHT

"They found my brother probably three-quarters of a mile away, south of where the house is, on the 101 Freeway," he said, adding that Connor was taken to a local hospital.

"My brother is OK," he said.

But his father, who has six children, is yet to be found, said McManigal, who is trying to get back home.

The founder of St. Augustine Academy in Ventura was among those killed early Tuesday when a powerful mudslide swept him and his wife from their Montecito home.

Roy Rohter was identified by officials at Thomas Aquinas College, from which his daughter graduated in 2000. His wife, Theresa, was rescued and is in stable condition, officials said.

Friends remembered Rohter as an energetic leader and generous benefactor of the college.

"Roy Rohter was a man of strong faith and a great friend of Catholic education," Michael F. McLean, president of the college, said in a statement posted on the school's website. "He played a pivotal role in the lives of countless young Catholic students — students who came to a deeper knowledge and love of Christ because of his vision, commitment and generosity."

Michael Van Hecke, headmaster of St. Augustine, said in a statement that Rohter "has done so much for so many people and pro-life and Catholic education causes. ... Thousands have been blessed by the Rohters' friendship and generosity."

Emergency crews spent the first hours of light making rescues in voluntary evacuation zones near Montecito Creek north of U.S. 101.

In the 300 block of Hot Springs Road, crews rescued six people and a dog after four homes were destroyed. The mud lifted one home off of its foundation and carried it into trees, where it then collapsed, Eliason said. Firefighters used the jaws of life to cut their way into the home where a firefighter heard muffled cries for help from a 14-year-old girl, Eliason said.

A rescue dog pinpointed the girl's location and two hours later, the mud-covered girl was pulled free. A second 14-year-old girl was also rescued from the same neighborhood and carried from ankle-high mud in a basket by half a dozen firefighters.

The U.S. Coast Guard also sent rescue helicopters into the area Tuesday morning, hoisting several people from collapsed homes or rooftops that stood above swirling mud and water. Rescue personnel were also able to save a young boy who was swept more than half a mile south from his house after the building was lifted from its foundation in Montecito, authorities said.

The boy was found alive under a U.S. 101 overpass, authorities said. But his father remains unaccounted for.

On Hot Springs Road on Tuesday afternoon, a dozen sheriff's deputies carried a body on a gurney from a collapsed house as muddy water raced down the street. The deputies surrounded the body in silence for several moments before placing it gently into an emergency vehicle.

According to the National Weather Service in Los Angeles, the highest preliminary rainfall total appeared to register at roughly 5 inches in a gauge north of Ojai in Ventura County, in the burn area of the Thomas fire, which forced evacuations and destroyed homes last month. With heavy showers still forecast, flash flood warnings remained in effect for Santa Barbara County and southern Ventura County through Tuesday afternoon, according to the National Weather Service.

AMERICAN OVERSIGHT

The 101 Freeway was shut down in both directions for more than 30 miles in the Thomas fire burn area because of flooding and debris flow, spanning an area from Santa Barbara to Ventura, according to the California Highway Patrol. Sections of routes 33 and 150 were also closed in Ventura County, according to the Sheriff's Department. There was no estimate for when the roadways might reopen, a California Department of Transportation spokesman said Tuesday afternoon.

In Los Angeles, one person was killed when a big rig overturned in the northbound lanes of the 5 Freeway near Los Feliz, said Saul Gomez, public information officer for the California Highway Patrol's Southern Division. All northbound lanes were closed as of 4 a.m., though Gomez said police were hoping to reopen the roadway by 8 a.m.

The victim, who was not identified, was approximately 60 years old, Gomez said. No one else was injured. While the accident happened as rain fell across Los Angeles County, Gomez said he could not confirm the crash was storm-related.

The fatal crash was one of hundreds that occurred during the downpour. Between 5 and 9 a.m. Tuesday, there were 275 traffic collisions reported on Los Angeles-area freeways, the California Highway Patrol said. There were only 30 during the same time period a week ago.

Santa Barbara County officials evacuated nearly 7,000 residents from foothill communities shortly before the heaviest surge hit the area, according to Sheriff's Office spokeswoman Kelly Hoover.

About 3 a.m., she said, the storm became ferocious.

"We just had a deluge, a power surge of rain. And we had a report of a structure fire burning in the Montecito area, the San Ysidro area. And it just kept going downhill from there," she said. "We have people stuck in their homes, stuck in their cars. There's downed power lines, flooded roadways, debris."

Hoover said the shutdown of the 101 Freeway was heavily hindering rescue efforts.

"There's no way to get from Ventura here, no way for us to get south," Hoover said. "We're encouraging people to stay off the roads if they're in an evacuation area."

By 8:30 a.m., the county's dispatch center had at least 50 calls pending, she said.

Santa Barbara County officials put a boil water notice in effect for the entire Montecito Water District on Tuesday afternoon.

In Los Angeles County, there was "mudslide activity" on Country Club Drive in Burbank, where police ordered evacuations of all homes east of Via Montana on Tuesday morning. The Police Department released footage of water surging across a roadway and urged people not to attempt to drive over it. Some vehicles were picked up and moved by the surge, and a few homes suffered minor damage, but no one had been injured as of 1 p.m., according to Sgt. Derek Green, a Burbank police spokesman.

The torrent of mud and debris sheared at least three fire hydrants, pumping another 130,000 gallons of water onto the debris flow, said Bill Mace, an assistant general manager of water systems for Burbank Water and Power. The department was able to cut off the pressure to each hydrant, but 14 homeowners will be without water for at least two days, Mace said.

Country Club Drive residents Allie Vonnacher, 17, and her mom, Heidi Donato-Fennell, 42, said they awoke to the site of several cars flowing down the street, along with power lines, trees and mailboxes.

AMERICAN OVERSIGHT

"It's just surreal how powerful nature is," Donato-Fennell said. "You just hope it stays contained in the street and it doesn't become life-threatening."

Surges also washed out Topanga Canyon Boulevard north of Pacific Coast Highway, and sections of the 110 Freeway were closed because of flooding. The Los Angeles Fire Department had to launch a swift-water rescue to aid a man and a dog trapped in rising water near the Sepulveda Basin Recreation Area, and a Los Angeles police cruiser became mired in a debris flow on La Tuna Canyon Road, according to authorities. The officer was uninjured and walked out of the vehicle. The cruiser was in the process of being dug out of the mud with a backhoe early Tuesday.

International travelers arriving at Los Angeles International Airport also had to be diverted from Terminal 2 on Tuesday morning, after the customs area became flooded, the airport said on Twitter.

The CHP also said heavy rains likely contributed to a crash that left one person dead on Highway 126 in Ventura County, about two miles from the Los Angeles County line, on Monday afternoon. One woman died and two others were injured in the five-car crash, the agency said.

The National Weather Service was reporting rainfall totals of up to 5 inches in Ventura County and 3.3 inches in Santa Barbara County as of 11 a.m. Nearly 1½ inches of rain had fallen in Bel-Air, which could be susceptible to mudslides and debris flow because of damage caused by the Skirball fire last month.

The storm spared some areas that were affected by last month's blazes. Early Tuesday afternoon, evacuation orders for neighborhoods in the burn areas of the Creek and Fish fires were lifted, according to the Los Angeles County Sheriff's Department.

"I woke up ready this morning to laugh and scoff at all the gloom-and-doom predictions," said Dominic Shiach, 50. "It's actually way worse than I thought it was going to be."

Shiach wore a Navy raincoat as he walked Archie, his 3-year-old West Highland terrier, down Sycamore Canyon Road on Tuesday morning.

Amber Anderson with the Santa Barbara Incident Management Team said there were about 75 people who called for evacuation help.

Marc Phillips realized he should have listened to emergency officials as he trudged down East Valley Road in mud-soaked jeans.

"They were right," he said, pointing to a place where residences had been knocked from their foundations. "It looks like there was never a house there, but it was."

US Oks selling Japan missiles to shoot down North Korean missiles

By: Frank Miles, 1/9/18

The Trump administration has approved a $133.3 million missile defense sale to Japan to meet the escalating threat from North Korea — by shooting down the rogue nation's own ballistic missiles.

The State Department says Congress was notified Tuesday of the proposed sale of four missiles for the SM-3 Block IIA interceptor.

AMERICAN OVERSIGHT

A State Department official told Fox News that, "Also included are four Mk 29 missile canisters, and other technical, engineering and logistics support services."

The department said the sale would support the U.S. defense industry and underscore Trump's commitment to improve the defense of allies threatened by North Korea.

The system was jointly developed by Japan and the U.S.

The missiles could be used at sea with Japan's current Aegis-equipped destroyers and with the land-based Aegis system its Cabinet approved for purchase last month.

That's intended to bolster Japan's current missile defense and perhaps curry favor with President Donald Trump who is eager for U.S. allies to buy more American military hardware.

"If concluded, this proposed sale will contribute to the foreign policy and national security interests of the United States," the State Department official told Fox News. "It will bolster the security of a major treaty ally that has been, and continues to be, a force for political stability and economic progress in the Asia-Pacific region. It will also improve (Japan Maritime Self-Defense Force's) interoperability with U.S. missile defense systems, and increase the protection for U.S. installations in the region."

Fox News previously reported that North Korea's weapons "are only aimed" at America and its territories, a regime official menacingly revealed during Tuesday's joint talks with South Korea — doubling down on Kim Jong Un's frequent threats to destroy the United States.

CNBC

China is reportedly thinking of halting US Treasury purchase and that's worrying markets right now

By: Fred Imbert, 1/10/18

China, the United States' biggest buyer of sovereign bonds, could be slowing down or even halting its purchases, according to a report.

Bloomberg News reported Wednesday, citing people familiar with the matter, that officials in Beijing have recommended the Chinese government lowers — or even stops — its buying of U.S. sovereign debt.

The report also notes that Chinese officials think U.S. debt is becoming less attractive compared to other assets, adding that trade tensions between the two countries could provide a reason to slow down or halt the purchases.
The news is worrying markets.

Treasury prices fell, boosting yields. The U.S. dollar also fell vs. most currencies and gold increased.
Dow futures were down more than 110 points.

A taper in Chinese purchases would come as the Federal Reserve unwinds the massive balance sheet it amassed following the financial crisis. The Fed is also expected to raise rates three times this year. In 2017, the central bank also hiked rates three times.

The U.S. 10-year yield rose to 2.59 percent on Wednesday, hitting levels not seen since last March. The dollar also fell against a basket of major currencies, trading down 0.6 percent at 91.96.

Amid signs of a thaw in North Korea, Tensions bubble up

By: Gerald Seib, 1/9/18

A tentative move toward diplomacy over the confrontation with North Korea has begun, though that hardly means the tension is evaporating.

In a village on their heavily militarized border, North and South Korean officials opened talks Tuesday, ostensibly over possible North Korean participation in the coming South Korean Olympics. South Korea would like the talks to expand beyond that, toward finding broader ways to lower tensions.

But as just one sign of how fraught the situation remains, simply consider this: U.S. officials are quietly debating whether it's possible to mount a limited military strike against North Korean sites without igniting an all-out war on the Korean Peninsula.

Senior officials from South and North Korea held their first formal face-to-face talks in two years on Tuesday, discussing Pyongyang's possible participation in the Winter Olympics and other issues in hopes of cooling tensions.

The idea is known as the "bloody nose" strategy: React to some nuclear or missile test with a targeted strike against a North Korean facility to bloody Pyongyang's nose and illustrate the high price the regime could pay for its behavior. The hope would be to make that point without inciting a full-bore reprisal by North Korea.

It's an enormously risky idea, and there is a debate among Trump administration officials about whether it is feasible. North Koreans have a vast array of artillery tubes pointed across the demilitarized zone at Seoul, the capital of South Korea, with which they could inflict thousands of casualties within minutes if they choose to unleash an all-out barrage.

Now, that danger is coupled with the risk that the North Koreans could attempt to use a nuclear weapon if they choose to escalate in retaliation against even a single strike.

Such a debate reflects how tense the situation remains, even though North Korea has scaled back the pace of its provocative actions in recent weeks and opened the door to diplomacy.

Tuesday's talks marked the first high-level dialogue between the Koreas in two years. After almost a year of regular provocations from North Korean leader Kim Jong Un, they are the first real sign that a diplomatic track is possible to begin de-escalating tensions over his nuclear and missile programs.

The U.S. and South Korea agreed on Thursday to delay their planned joint military exercises. The South Koreans are hosting the Olympics in February and want a period of calm and peace on the Korean Peninsula during that period. WSJ's Gerald F. Seib explains the short-term and long-term consequences of the delay.

A key question is whether the conversation can expand beyond the Olympics to include other topics Seoul wants to discuss, notably reunification of Korean families split between North and South, and a general lowering of hostility.

Even if that happens, though, the diplomatic move needed to really start dialing back tensions would be conversations between North Korea and the U.S. That possibility seems stuck in a long-distance dance between Pyongyang and Washington, with each side making opening bids the other finds unacceptable.

North Korea wants the U.S. to forswear joint military activities with South Korea in advance of talks, while the U.S. insists

AMERICAN OVERSIGHT

the goal of talks should be to eliminate North Korea's nuclear arsenal, not merely contain it. Each side finds the other's conditions unacceptable.

Indeed, diplomats suspect North Korea's engagement with South Korea is an attempt to drive a wedge between Seoul and its American allies, thereby reducing the possibility the U.S. could take any kind of military action against Pyongyang.
Efforts are under way to broaden the diplomatic opening beyond Tuesday's intra-Korean conversation. Jonathan Powell, a former chief of staff to British Prime Minister Tony Blair, has offered to help try to get broader conversations going, three people in the diplomatic community said.

And Jeffrey Feltman, an American diplomat now serving as U.N. under secretary-general for political affairs, recently traveled to North Korea to explore diplomatic possibilities. But Mr. Feltman returned alarmed at what he found in Pyongyang, where he sensed little interest in either talks with the U.S. or moving off the North's current nuclear track, say those who have talked with him.

Within the Trump administration, officials say, Secretary of State Rex Tillerson and Defense Secretary Jim Mattis remain focused on trying to get a broader diplomatic effort under way to rein in the North Korean nuclear program. National security adviser H.R. McMaster is arguing more vocally, publicly and privately, that military options need to be considered.

The wild card, as in all things in the Trump administration, is President Donald Trump himself. He signaled his own interest in a diplomatic track in the past. But he has also seemed to disavow Mr. Tillerson's overtures on negotiations. And his recent tweet—asserting he has a "bigger" nuclear button than does Mr. Kim—is, in the words of one experienced diplomat, the equivalent of "waving a red flag before a bull."

The U.S. hasn't done the kind of logistical preparations needed for a full-blown conflict on the Korean Peninsula. Still, as the talk of a "bloody nose" option suggests, that doesn't mean one can't happen.

Thanks to the Olympics and the intra-Korean diplomatic opening, the next few months figure to be relatively calm. But depending on whether the diplomatic opening widens or not, mid-2018 could be a time of reckoning.

A New Chapter Begins in the Long Running PWSA Saga

(December 13, 2017)--Summary: The year 2017 has not been kind, to say the least, to the Pittsburgh Water and Sewer Authority (PWSA). As *Policy Brief Vol. 17, No. 14*, described earlier this year, the PWSA's very old infrastructure has been continually springing leaks that have cost millions of dollars to repair. The mayor proposed leasing the beleaguered authority to a private operator. But given the very high level of debt and the daunting problem of replacing the many miles of water and sewer lines at a cost of several billions of dollars, finding a firm that will enter into a lease agreement on the mayor's terms is not likely to happen. A state auditor general's (AG) report claims that half of all the water treated is lost before it reaches customers.

AMERICAN OVERSIGHT

PWSA's very serious problems caught the eye of the state Legislature which introduced a bill (HB 1490) back in June to place the authority under regulation by the state Public Utility Commission (PUC). After the House passed the bill and sent it to the Senate, HB 1490 was not acted on again for several months. It received legislative approval and was signed into law in late November.

The legislation does two essential things: First, it holds the PWSA accountable for putting together a compliance plan to bring its procedures such as accounting, billing and technology in line with the requirements applicable to other PUC-governed water and wastewater utilities. The authority needs to improve its asset management capabilities so it will know what assets need repair and be able to prioritize those repairs.

Second, it requires the PWSA to create a long-range plan to improve its infrastructure. This plan must include a general description of items needing repair, where they are located and an initial schedule of the planned repairs or replacements. The PWSA will also be required to project annual expenditures to implement the plan and will be allowed to raise rates to pay for the repairs/replacements. The authority will be allowed to update the charge quarterly as appropriate while keeping customers informed about any rate increases. In addition, the PUC will require the authority to submit an annual plan detailing what has been improved or replaced as well as a description of the work to be done in the coming year. This requirement is designed to ensure that the PWSA follows through on the urgent need to replace the outdated and fragile infrastructure.

The legislation gives the authority six months (until May 20, 2018) to present its compliance plan.

In addition to legislative action on the PWSA this year, the AG conducted an audit of the authority (the city controller had performed an audit earlier in the year). The AG audit focused on the leadership of the PWSA and its ties to city government but also provided a useful history of the authority.

A succinct recap of that history follows: The PWSA was established in 1984 under the Municipal Authorities Act of 1945 but was not granted a fully independent status. Indeed, its primary function was to oversee a $200 million capital improvement program to refurbish the entire system. The city would bill the PWSA for any back-office services the authority used and employees remained on the city payroll. In 1995, the PWSA and city replaced the 1984 arrangement by entering into a new agreement in which the authority would lease the system from the city for an upfront payment of $101.4 million to cover the 30 year lease. At the end of the lease, the authority could purchase the system for $1.

AMERICAN OVERSIGHT

However, the 1995 agreement also included a 40-year co-op arrangement in which the city would also provide for a fee the same services agreed to in 1984—telephone and data, vehicle fuel and repair, legal aid, computer services, payroll service and administration of benefit programs. A major change was to move PWSA employees off the city's payroll.

In addition, the PWSA would provide the city with 600 million gallons of water per year at no charge (estimated to be worth $6 million and $6.84 million at 2016 and 2017 rates, respectively). The city would also charge the authority for direct and overhead expenses for any services required (estimated to be worth a total of $7.15 million from 2012 to 2016). Furthermore, the PWSA is required to make equalization payments to city residents not served by the authority and have to get their water from another provider if its water costs more than PWSA water. Over the three years ending in 2016, this requirement cost PWSA an estimated $4.8 million.

Both the 1984 and 1995 agreements placed conditions on the PWSA that doomed it to financial hardship—while providing a bailout for a city that couldn't put its fiscal house in order. The AG quoted a former mayor who claimed that from 1984 to 1995 the PWSA was used to help balance the city's budgets. Revenues were diverted to uses not related to the PWSA system limiting the authority's ability to invest in infrastructure upgrades.

A primary aim of the 1995 agreement was to spin off the PWSA to "focus on rebuilding the system and not use it as a financial tool of the city." The AG's report notes that the city used the $101.4 million payment—which the PWSA had to borrow—to improve its own financial situation. According to the audit, "the City retained ownership of the system, yet pawned the financial and operation responsibilities of the neglected system off on the PWSA."

The AG believes the "City has over-extended authority regarding the PWSA." Based on the original governing documents (1984 and 1995 leases), the city never intended the PWSA to be a truly independent organization. That starts with the makeup of the board of directors. One seat belongs to city council, two belong to the city finance director and treasurer and the remaining four are appointed by the mayor. The board appoints an executive director. Little wonder the authority agreed to lopsided agreements with the city.

Additionally, to the detriment of the PWSA, the 1995 lease agreement states that the PWSA is to keep the system in "as good condition as it is in on the date hereof, ordinary wear and tear excepted… while also putting all the financial burden on the authority." The new 1995 agreement stipulates that "the City shall not be liable for any [PWSA] debt payments." This holds the PWSA responsible for the system and absolves the city of any responsibility

AMERICAN OVERSIGHT

even though it still owns the system's assets. City ownership of the assets and the co-op agreement have limited the steps PWSA could take to accelerate needed improvements. This arrangement designed to benefit the city while hamstringing the PWSA is not remotely akin to good governance.

As mentioned above the AG audit reports that the city receives free water worth close to $7 million, the value of the 600 million gallons allowed under the 1995 agreement. What is not known is how much water the city *actually* uses because the water it uses is not metered. The city does not have a list of all properties that receive free water. However, as the audit explains the known free water users include, "its departments, agencies and instrumentalities (i.e., Pittsburgh Zoo, Phipps Conservatory, National Aviary, and Schenley Golf Course)." Although in a footnote it is explained that the golf course was metered in 2012 and has been paying bills, but for prior years was not.

The PWSA has severely under-invested in its infrastructure in large part due to the heavy debt load incurred over the past 30 years. The audit notes the debt levels (debt, bond and loan debt minus swap debt) increased from $300 million in 1995 to $680 million in 2012 to $750 million at the end of 2016.

High debt levels at the PWSA have critically hampered the authority's ability to make adequate investments in its infrastructure. For the years 2012-2016, the period of the audit, the PWSA's average annual capital investment was $31.4 million, ranging from $21.4 million in 2013 to $47.2 million in 2015. The recommended annual capital investment during this time, as noted by a PWSA official, was $200 million. Obviously the actual investment fell well short of what was needed.

Misuse of the PWSA as a source of funding for the city resulted in inadequate expenditures on the crumbling infrastructure. This ill-advised policy has caught up to the authority (and the city) in a big way and it will cost several billions of dollars to fix the problems now staring them in the face.

So where does the PWSA go from here?

Provisions of HB 1490 require the authority to start working on a plan to begin addressing the dreadful condition of its delivery infrastructure. Presumably, the PWSA board is taking the six- month deadline seriously. Moreover, the board and the city should also take the AG's audit to heart and begin to develop a more arms-length relationship wherein the PWSA has greater independence and less influence from city government officials. Perhaps the PUC can help with that effort. While the authority will remain an autonomous entity, its board will be accountable to the PUC and ultimately the Legislature which will undoubtedly be keeping a close watch.

AMERICAN OVERSIGHT

Of utmost importance is to keep the PWSA's critical problem of repairing and/or replacing its very old equipment at the forefront of management thinking. And that project will be very costly—recent estimates place the cost at $5 billion. Unfortunately, with its current debt and revenue levels, the authority will find it difficult to borrow the enormous amount of funding necessary to carry out a long term repair and replace program. Thus, as our earlier *Policy Briefs* pointed out, customers will be forced to bear the cost of borrowing the funds for the project in the form of substantially higher rates. Note that rate hikes must be approved by the PUC and those increases must conform to the long-term plan.

And what can the city do to help fix the mess it has allowed to develop? While the co-op agreement frees the city from any PWSA debt responsibility, nonetheless the city should take steps to help. First of all it needs to meter all city properties and begin paying for water like any other user. Secondly, city officials should pledge to support the PWSA as it develops a long-term plan as required by law and avoid carping when rate hikes become necessary. Indeed, city officials should help prepare residents and businesses for the likelihood of substantially higher water and sewer bills to come over the next several years. Dealing with this critical problem cannot be avoided any longer. In short, the city must accept the urgent need for a wholesale system upgrade and fully and willingly cooperate and assist in the process.

By Kelsey Tamborrino | 06/29/2018 05:41 AM EDT

With help from Anthony Adragna

PLOT TWIST: FERC Commissioner Rob Powelson shocked the energy world Thursday night when he announced he will leave the agency to lead a trade association for water utilities. Powelson, a Republican appointed by President Donald Trump, was one of the agency's fiercest critics of the administration's efforts to bail out struggling coal and nuclear power plants, but he told Pro's Darius Dixon that policy disagreements had nothing to do with his decision. He said he simply couldn't pass up the once-in-a-lifetime opportunity to take a great job as CEO of the National Association of Water Companies that would allow him to nix the commute to Washington from his home near Philadelphia.

There is no "subplot to this," Powelson said, adding it was a decision he made with his family. "I'm at peace. I know people want to be like, 'Argh, he got forced out! He pissed off the president or Rick Perry.' I'm free to speak my mind now more than ever. And as a Philly boy, I will let it fly," he said. "No one came at me and said, 'You need to move on. You know if that would ever happen, I would never do it anyway. ... If I was done wrong, I'd tell you about it. But life is better than I deserve it to be."

His departure will leave FERC deadlocked, and likely unable to approve new interstate natural gas pipelines over Democratic objections related to issues like climate change. Powelson was a critic against the administration's coal and nuclear bailout pitch, telling a Senate committee earlier this month that a bailout "goes against everything we talk about in

AMERICAN OVERSIGHT

terms of supply-and-demand side economics."

Now Trump has a chance to nominate a new commissioner who is friendlier to his pro-coal policies. Still, that person will require Senate confirmation with a tough calendar ahead. Keep in mind, the Senate is racing toward midterm elections, August recess and now a new Supreme Court confirmation — making a speedy confirmation for a FERC nominee all the more unlikely. Read more.

NEW YORK STATE OF MIND: Energy Secretary Rick Perry offered some harsh words Thursday for the state of New York energy, suggesting the federal government should consider preventing the state from blocking new natural gas pipelines. "I think we need to have a conversation as a country, is that a national security issue that outweighs political concerns in Albany, New York?" Perry said, referring to the administration's central national security argument behind efforts to bail out economically struggling coal and nuclear power plants.

Perry has criticized New York Gov. Andrew Cuomo for years, but didn't mention him by name in his remarks at the World Gas Conference. Perry said political opposition to new gas infrastructure had left the state vulnerable, including to major winter storms and cyberattacks. "And people literally have to start making the decision about 'Do I keep my family warm? Do I keep the lights on?' Does the financial center of New York go dark? Do the hospitals shut down?" he said. Read more from Pro's Matt Daily.

FINALLY FRIDAY! I'm your host, Kelsey Tamborrino. PECO's Tom Bonner correctly identified the three current governors born in Pennsylvania: John Kasich, John Hickenlooper and Tom Wolf. A geography question to close out the week: What state has a triple divide that allows water to flow to the Pacific Ocean, Atlantic Ocean or the Hudson Bay? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

PRUITT MEETS CALIFORNIA OFFICIAL ON CARS: EPA Administrator Scott Pruitt will meet with California's top air regulator this morning in San Francisco, the agency said. Pruitt and Mary Nichols, the head of the California Air Resources Board, will discuss various issues including "cooperative federalism, car and truck greenhouse gas standards, and NAAQS," according to EPA. The Trump administration is weighing action on car emissions standards that could spark a court showdown with California, as it currently has authority to set its own greenhouse gas limits on tailpipe emissions. The last time EPA met with CARB officials, the agency called it a "productive" meeting, although Nichols took to Twitter shortly after to dispute that characterization.

** **Presented by ExxonMobil:** Natural gas has become more important than ever. That's because it's fueling an American manufacturing revival and creating jobs while lowering emissions. And ExxonMobil is one of the world's largest providers. EnergyFactor.com **

ZINKE TAKES HIS TURN: Kicking off the final day of the weeklong World Gas Conference, Interior Secretary Ryan Zinke will deliver opening remarks at a panel on

AMERICAN OVERSIGHT

innovation in the energy industry that's set to answer questions like, "How can innovative technologies, business models and operating practices shape the future of the global natural gas industry?"

Later in the day, EPA's air chief, Bill Wehrum, will join a workshop on the "role of voluntary action in methane management" — an interesting discussion as greens have pointed fingers at the agency after a report released last week found oil and gas methane emissions are greater than previously thought. Former Energy Secretary Ernest Moniz will close out the conference with remarks about "energy systems of the future."

FOR YOUR RADAR: Zinke met with a "good mix" of electricity, oil and gas leaders Thursday afternoon for a roundtable discussion, an industry source who attended the meeting told ME. About 40 or more people attended the meeting with Zinke, the source added, which ranged from discussions on streamlining the permitting process to federal lands. The meeting follows a similar one in May between Zinke and several conservation groups.

INTERESTING TEAM: Reps. Kyrsten Sinema, a Democrat running for Senate in Arizona, and Steve Stivers, the chairman of the National Republican Congressional Committee, released legislation Thursday that would require political appointees to personally pay back any illegal expenditures of public funds. No one is singled out, but Pruitt's $43,000 privacy booth would certainly fit the bill. To qualify for repayment under the bill, the spending must be found illegal through a joint determination from an inspector general and the Government Accountability Office. Reps. Brian Fitzpatrick, Josh Gottheimer, Carlos Curbelo and David Young co-sponsored the legislation.

TIMING UPDATE: A House Oversight Committee aide tells ME that staff expect to speak with Kevin Chmielewski, the former Trump EPA political staffer-turned-whistleblower, "within the next couple of weeks." They'll interview current chief of staff Ryan Jackson today, according to the aide. Pro's Anthony Adragna reported committee staff also interviewed policy adviser Samantha Dravis on Thursday.

INDIAN AFFAIRS NOM CONFIRMED: The Senate confirmed Tara Sweeney to be assistant secretary for Indian Affairs at Interior on Thursday by a voice vote. Sweeney, who previously served as executive vice president of external affairs for Arctic Slope Regional Corporation, was nominated back in October, and was advocated for by Senate Energy Chairman Lisa Murkowski. Sweeney was welcomed in a tweet by Zinke , who said he was "excited" for her arrival. "She is the first Alaska Native woman to hold the position," he tweeted. "A historic day for Alaska and America!"

IG RELEASES SUMMARY ON NPS ALLEGATION: Interior's inspector general released a brief summary of its investigation into allegations made against National Park Service Deputy Director P. Daniel Smith. An anonymous employee earlier this year said Smith made an obscene gesture and used vulgar language while standing in the hallway of the agency's headquarters, which prompted OIG to launch an investigation in May. The summary stopped short of condemning Smith, and cites a retelling by Smith and another

AMERICAN OVERSIGHT

NPS employee, who denied that Smith touched himself obscenely or used any vulgar language. The OIG said it could not find anyone else who witnessed the incident.

Smith, however, "acknowledged he gestured with his hands to simulate urinating while telling a story and stated that in hindsight, the story and the gesture were not appropriate for work," according to the summary. "The other employee said he was not offended by the story or the gesture but also acknowledged that they were inappropriate for the workplace."

THIS LAND IS OUR LAND: Montana Sen. Jon Tester is out with a new statewide ad promoting his stance on public lands, Campaign Pro's Zach Montellaro reports. The ad features a video of Tester speaking about his roots. "My family has made a living off the land in Montana for over 100 years," Tester says, adding, "As long as I'm in the U.S. Senate, Montana is not for sale." Watch the ad.

GAO: DOE SHOULD IMPROVE SPR OVERSIGHT: The Government Accountability Office released a report Thursday that offers several ways for DOE to modernize the Strategic Petroleum Reserve. The report found DOE had not identified the optimal size of the reserve, and said the last review conducted by the department "was limited in several ways." GAO made several recommendations, including a suggestion that Congress "may wish to consider setting a long-range target for the size and configuration of the SPR," taking into account issues like future oil production projections and U.S. International Energy Agency obligations.

"By not examining a full range of options, DOE risks missing beneficial ways to modernize the SPR while saving taxpayer resources," according to the GAO report, which was requested by the House Energy and Commerce Committee. "We will give GAO's recommendations careful consideration as the committee considers legislative options to address the concerns raised by this report," a joint statement from the E&C energy subcommittee's leadership said.

REPORT: MORE CAN BE DONE TO FIGHT BLACK LUNG: Although cases of black lung disease has declined in miners in most areas, excluding Appalachia, a new report from the National Academies of Sciences, Engineering, and Medicine says a "fundamental shift" is required in the way operators approach exposure control in order to eliminate the disease. The report found operators are complying with regulatory requirements, but the basis of such requirements could improve by recommending improvements to current monitoring technologies, as well as building out the research currently being done, among other guidance. Read the report.

AGs JOIN EPA SCIENCE PANEL SUIT: Attorneys general from nine states filed an amicus brief this week in support of the plaintiffs suing over EPA's policy barring scientists who receive agency grants from serving on its scientific advisory committees. "The advisory committee Directive has already caused dozens of uniquely qualified scientists to be removed from their posts on EPA advisory boards and committees, while leaving in place (and even increasing) persons affiliated with regulated industries," the brief states. AGs from Washington, California, Illinois, Iowa, Maryland, Massachusetts, New Jersey,

AMERICAN OVERSIGHT

New York and Oregon, and the Pennsylvania Department of Environmental Protection joined the filing.

MAIL CALL! RECONSIDER THIS: A bipartisan and bicameral group of lawmakers is calling on Perry to reconsider DOE's move to have power marketing administrations report directly to the assistant secretary for electricity instead of the deputy secretary, as has been tradition. "We are concerned that these changes could lead to decisions that are not in the best interest of Pacific Northwest ratepayers," they write.

A TIMELINE EMERGES: The White House is hoping to select a Supreme Court nominee before Trump leaves for his European trip on July 10, POLITICO's Nancy Cook reports. Whomever Trump nominates will likely get a confirmation vote after Labor Day, Senate Majority Whip John Cornyn said Thursday, telling POLITICO's Elana Schor he'd be "shocked" if the vote occurred before then. Cornyn, however, added he is "not opposed" to moving more quickly but said the process to confirm a nominee (i.e., background checks) would take quite a bit of time.

SENATE PASSES FARM BILL: The Senate Thursday passed a farm bill, H.R. 2 (115), which includes a provision reauthorizing the National Flood Insurance Program. But with the NFIP expiring on July 31, senators are looking at other vehicles to attach a short-term extension, Pro's Zachary Warmbrodt reports.

MINN. PUC APPROVES LINE 3: The Minnesota Public Utilities Commission approved Enbridge's proposed Line 3 tar sands pipeline on Thursday in a unanimous 5-0 vote, MPR News reports. The decision came with several conditions, the website writes, "including a decommissioning trust fund to ensure the new pipeline will be retired responsibly decades from now." Green groups have urged the PUC to reject the pipeline, especially following a 2010 Enbridge pipeline spill in Kalamazoo, Mich. Read more.

VISUALIZE IT: JUST Capital, a nonprofit business tracking group, will release today its new "Environmental Explorer" interactive tool, which allows users to explore companies based on their environmental impact, including recycling, waste management and electricity use. See it here.

Stories from POLITICO Pro

GOP FERC commissioner slams latest bailout pitch Back

By Darius Dixon | 06/12/2018 03:17 PM EDT

Republican Commissioner Rob Powelson positioned himself Tuesday as FERC's leading critic of the Trump administration's call to rescue financially struggling coal and nuclear plants, panning the latest approach floated by the White House.

Letting the Energy Department prop up money-losing power plants in the name of national security is not necessary to maintain a resilient electric grid, Powelson said at a Senate Energy and Natural Resources Committee hearing with all five FERC commissioners. A former chairman of the Pennsylvania Public Utility Commission, Powelson said electric service was not disrupted by power company bankruptcies during his time as a state regulator.

"These markets are operating hyper-efficiently," he said. "Now, we're seeing the best of all worlds: New resources, cleaner resources, more efficient resources coming in the marketplace. The markets are creating orderly entry and exit, and to put someone's risk capital at play I have grave concerns about that."

The idea of a government bailout "goes against everything we talk about in terms of supply-

AMERICAN OVERSIGHT

and-demand side economics," Powelson added.

DOE is pondering the use of the Federal Power Act and the Defense Production Act to force coal and nuclear power plants to keep operating in the face overwhelming competition from cheap natural gas and growing renewable power that has pushed big power units into retirement. A memo that circulated at the National Security Council earlier this month cited possible attacks on natural gas pipelines among the justifications for DOE's latest national security approach.

Speaking to reporters after the hearing, Powelson acknowledged that national security "should be part of the conversation," but he seemed skeptical of the administration's shifting justifications for a bailout.

"All of a sudden we have a national conversation that went from potential reliability issues, now to national security issues," he said, referring to DOE's ill-fated effort last year to push for payments to power plants with 90 days of fuel on-site, an earlier tactic aimed at supporting coal and nuclear power. "I struggle with the original posture of saying the FERC's not doing enough. I categorically disagree."

Chairman Kevin McIntyre acknowledged that Energy Secretary Rick Perry has the authority to declare a grid emergency that could require retiring power plants to keep operating, but he did not offer any opinion on the merits of such an approach.

Democratic FERC Commissioner Richard Glick, who once worked for former Energy Secretary Bill Richardson, said the agency has not built up a solid record for declaring a national emergency.

At the end of the Clinton administration, the Western energy crisis was still unfolding and Richardson invoked the emergency powers in the Federal Power Act and made use of the Defense Production Act to force the sale of natural gas supplies into the region because a defense facility was impacted, he said.

"We created a record. We have a record that it truly was an emergency," Glick said. "In this case, I think what we're trying to get a solution before we actually build a record suggesting that there's actually an emergency."

FERC Commissioner Neil Chatterjee, a former aide to Senate Majority Leader Mitch McConnell, tried not to dismiss DOE's proposal out of hand.

"It's a leaked memo. We don't know what the administration intends to do with it. But I think people are also too quickly dismissing it," Chatterjee said. "I've read the memo. There are a number of points in the memo that are thoroughly well-cited and researched and I think we can disagree what the remedy might be but I think they raise a real issue."

On Monday, Chatterjee and Glick penned an editorial that called for setting up a regiment of mandatory standards for natural gas pipeline, the infrastructure that DOE argues poses a

AMERICAN OVERSIGHT

risk to national security.

Senate Energy and Natural Resources Chairwoman Lisa Murkowski told regulators that she's been frustrated with FERC's pace of addressing market concerns and argued that that may have egged DOE on to jump into the power markets.

"I have my concerns with the steps that the Department of Energy is reported to be considering. But I also recognize that they're trying to fill a perceived vacuum," the Alaska Republican said at Tuesday's hearing.

"In my view, FERC should be pointing the way on policy improvement that address grid vulnerabilities while reaffirming our commitment to competition in wholesale power markets," she said. "And frankly, as one who has been concerned about this issue for years now, I find it unfortunate that prior commissions did not lead more effectively."

Powelson: No 'subplot' to surprise FERC exit Back

By Darius Dixon | 06/28/2018 08:20 PM EDT

FERC Commissioner Rob Powelson says his surprise decision to resign after just one year at the commission had nothing to do with his frequent objections to one of the Trump administration's main energy policy goals.

The Republican former state regulator has been one of the most vocal critics of the Energy Department's efforts to rescue economically struggling coal and nuclear power plants, but he said that position was not a factor in his decision to leave the commission. In mid-August, Powelson will take over as CEO of the National Association of Water Companies. He simply jumped at a once-in-a-lifetime opportunity to take a great job that would allow him to avoid commuting to Washington from his home near Philadelphia.

There is no "subplot to this," he told POLITICO on Thursday, saying it was a decision he made with his family.

"I'm at peace. I know people want to be like, 'Argh, he got forced out! He pissed off the president or Rick Perry.' I'm free to speak my mind now more than ever. And as a Philly boy, I will let it fly," he said in a phone interview after announcing his plan to resign.

"No one came at me and said, 'You need to move on,'" he added. "You know if that would ever happen, I would never do it anyway. ... If I was done wrong, I'd tell you about it. But life is better than I deserve it to be."

AMERICAN OVERSIGHT

Powelson's departure could also leave FERC's four remaining commissioners unable to approve new interstate natural gas pipelines over Democratic objections related to climate change or the agency's overall process for assessing the need for those projects. A former chairman of the Pennsylvania Public Utility Commission, Powelson also was one of the strongest advocates for state regulators, especially in PJM — the regional grid that would be most affected by the Trump administration's coal-boosting efforts.

Leaving in August means that Powelson will have served on the commission for just one year of a term that was scheduled to run through mid-2020, making his the shortest tenure in agency history since the 1960s, when FERC was still the Federal Power Commission. It also gives President Donald Trump an opportunity to replace Powelson with a regulator who is friendlier to his pro-coal policies.

Powelson said he didn't expect to be at FERC for such a short time, but felt he couldn't pass up the job offer, especially after the National Association of Water Companies told him it was planning to move its headquarters from Washington to Philadelphia. He has two sons, a rising seventh-grader and a rising 10th-grader, and said that his job change was in part a decision between career moves and an opportunity to be closer to family.

"I had every intention to stay longer. But honestly, I served eight and a half years on the Pennsylvania commission. I love this place. The people are great [at FERC]," he said. "But for me to say no — that opportunity is not coming around again, and I knew that. There was just too much alignment for me not to take it."

The outgoing commissioner also said that he didn't pine for the FERC chairmanship, noting that few people run a state commission as well as FERC like Texas' Pat Wood did.

"I looked at Chairman [Kevin] McIntyre's desk the other day and I don't miss the piles of paper on my desk. I'm perfectly at peace. I was honored to be a commissioner. It's a stressful job to be a chairman and you're running the agency," he said.

"I've done the chairmanship duty [in Pennsylvania] and I'm perfectly at peace with that," he said. With emphasis and a chuckle, Powelson added: "Perfectly at peace, trust me."

He said he told all the commission leadership colleagues about his plans face to face, and sent an all-hands email to FERC staff Thursday.

Powelson warned that he's excited to talk about "water resiliency" and the "water grid" in a post-Flint, Mich., world that is also looking at the energy-water nexus. The association represents water and wastewater utilities such as American Water and Aqua America, among other companies.

"Now I get to be a pain in the ass on water policy," he said.

Rick Perry takes aim at New York Back

By James Hohmann | 06/19/2013 05:01 AM EDT

Rick Perry stars in an ad out Wednesday that coincides with his swing across the Northeast to lure jobs to Texas.

The one-minute, campaign-style video — shared first with POLITICO — attacks New York, where the governor is spending the day, as a high-tax, high-regulation state. (Watch the ad.)

New York Mayor Michael Bloomberg's ban on large sodas is referenced, and New York Gov. Andrew Cuomo is mentioned by name in the first 30 seconds, which plays out like an attack ad.

The second half turns triumphal, with feel-good music and B-roll of Texas skylines.

"Why have more jobs and businesses moved to Texas than any other state? Our state is No. 1 for business because we have no state income tax," Perry says, "and [Texas] has added more jobs than any state in the nation over the last five years."

The Republican governor, who many believe could run for president again in 2016, notes that Texas was just ranked No. 1 as a place to do business for the ninth straight year by Chief Executive Magazine.

"If you're tired of the same old recipe — of over-taxation, over-regulation and frivolous litigation — get out before you go broke," Perry says, with the state capitol in Austin as a backdrop. "Texas is calling. Your opportunity awaits."

As Perry speaks, messages on screen declare: "Bigger opportunities. Bigger Dreams. A Bigger Future. Go Big With Texas."

Perry is in Connecticut and New York for five days. He has courted, among others, gun manufacturers facing stricter laws in the wake of the Newtown shootings.

This is the latest salvo in an aggressive campaign to attract businesses and raise the state's profile that has already sent Perry to Illinois and California.

The video appears on the Web site of "Texas Wide Open for Business," which is part of the Economic Development Division within the governor's office.

TexasOne, a privately funded entity, launched a $1 million radio and TV campaign in Connecticut and New York last week. They are also paying for the governor's trip.

Back

Perry warns of looming New York energy 'reckoning' Back

By Matt Daily | 06/28/2018 04:57 PM EDT

Energy Secretary Rick Perry today suggested that the federal government should consider preventing New York state from blocking new natural gas pipelines, echoing the national security argument he has put behind his efforts to bail out struggling coal and nuclear power plants.

Perry, who has criticized New York Gov. Andrew Cuomo for years, didn't mention the Democratic governor by name, but said political opposition to new gas infrastructure had left the state vulnerable to potential devastating power outages.

"I think we need to have a conversation as a country, is that a national security issue that outweighs political concerns in Albany, New York?" he said.

New York has blocked the expansion of the Constitution Pipeline by denying the project the water permits it needs to extend the pipeline that would carry gas from Pennsylvania.

Perry laid out a scenario to an audience at the World Gas Conference where a major winter storm and cyberattack on the power grid hit the state at the same time.

"And people literally have to start making the decision about 'Do I keep my family warm? Do I keep the lights on?' Does the financial center of New York go dark? Do the hospitals shut down?" he said.

"At that particular point in time, the political leadership of that state that is keeping pipelines from being built — for strictly political purposes — are going to have real reckoning. I wouldn't want to be the governor of that state faced with that situation," he said.

Watchdog reports provide new ammo for Pruitt's critics Back

By Alex Guillén and Anthony Adragna | 04/16/2018 12:28 PM EDT

AMERICAN OVERSIGHT

Critics of Scott Pruitt got fresh ammunition against the embattled EPA administrator on Monday, with two federal reports revealing that EPA had broken the law in building him a secure phone booth and that the agency had granted previously undisclosed pay raises of more than 20 percent to his political appointees.

EPA failed to notify lawmakers that it spent more than $43,000 to build a secure phone booth for Pruitt's office, according to a report from the Government Accountability Office on Monday morning. A few hours later, EPA's inspector general detailed the steep pay hikes — but did offer some support for Pruitt's claim that he had been unaware of controversial raises at the agency, though the internal watchdog stressed its investigation is ongoing.

Pruitt has drawn criticism that he has spent excessively on heightened security since he joined the agency last year. While Monday's GAO report focuses on the phone booth, Pruitt has also expanded his security staff to provide round-the-clock protection and spent heavily on first-class travel for himself and his security personnel to limit his exposure to potential threats from fellow passengers. He also faces questions over his use of special hiring authority to hire former lobbyists and political allies, but the IG's initial findings do not include evidence that he personally circumvented the White House in order to boost their pay, despite earlier reports.

Construction of the phone booth violated the Financial Services and General Government Appropriations Act since it cost well above the $5,000 limit that requires the agency to notify Congress, according to the GAO.

"We conclude that EPA violated section 710 when it obligated $43,238.68 for the installation of a soundproof privacy booth without providing advance notice to the Committees on Appropriations of the House of Representatives and the Senate," the GAO report said.

EPA defended the booth as necessary to Pruitt's work, arguing that it was similar to a computer or other equipment he uses. But GAO said the booth is clearly a "furnishment" under the law and thus should have been reported to Congress in advance. EPA did not say whether the phone booth had been certified as a Sensitive Compartmented Information Facility, or SCIF.

"This is just one more example of how Scott Pruitt is blatantly breaking laws and ethics rules that protect taxpayers from government waste, fraud and abuse in order to help himself to perks and special favors — and taking deliberate steps to hide everything from Congress and taxpayers," Sen. Tom Udall (D-N.M.) said in a statement to POLITICO.

Critics wondered why Pruitt needed a place to make secure phone calls in his office since the agency already had two SCIFs in its headquarters. Those SCIFs are located outside of Pruitt's secure suite of offices, however.

The GAO report specifically steered clear of judging whether installing the booth was the

AMERICAN OVERSIGHT

best or only way to provide Pruitt with a secure phone line.

An EPA spokeswoman defended Pruitt's need for the booth but acknowledged that Congress had not been informed ahead of time.

"EPA is addressing GAO's concern, with regard to Congressional notification about this expense, and will be sending Congress the necessary information this week," spokeswoman Liz Bowman said in a statement.

Sen. John Barrasso (R-Wyo.), who chairs the Environment and Public Works Committee, said he wants to hear more from EPA about why it did not properly inform Congress.

"It is critical that EPA and all federal agencies comply with notification requirements to Congress before spending tax payer dollars. EPA must give a full public accounting of this expenditure and explain why the agency thinks it was complying with the law," he said.

GAO is also reviewing Pruitt's appearance in a cattle industry video that asked for public comments on Pruitt's plan to repeal the Waters of the U.S. rule. Democrats similarly alleged his actions violated the Antideficiency Act.

Separately, EPA's inspector general released a preliminary report on its investigation into several political appointees who were hired or promoted under special authority given to Pruitt through the Safe Drinking Water Act.

The report shows a handful of political appointees at EPA saw their salaries boosted by 20 percent or more in their first year at the agency — in some cases over objections from the White House. But Pruitt did not personally sign off on the most controversial raises, leaving open the question of how involved he was in the decision. The IG said the interim report was meant to "provide certain factual information" and "does not present any conclusions or recommendations."

None of the EPA staffers were named in the report, but the salary and other information provided aligns with names included in previously released employment documents reviewed by POLITICO.

The IG's report shows Sarah Greenwalt, senior counsel to Pruitt, received a $56,765 raise on April 1, while Millan Hupp, director of scheduling and advance, received a $28,130 raise the same day. Those figures are in line with The Atlantic's report that EPA circumvented the White House to boost their pay.

Chief of staff Ryan Jackson signed forms authorizing both of those pay increases, each time writing "Ryan Jackson for Scott Pruitt," according to documents included with the IG report. Jackson had said last week that he approved the raises.

EPA said those raises have been reversed, but the IG was unable to back up that claim. "We requested from the agency any documentation indicating modifications to the salary of any

AMERICAN OVERSIGHT

of the employees subsequent to the personnel actions noted above. As of report issuance, the agency was unable to provide us with complete information or confirmation of any modifications," according to the report.

The IG's office also uncovered several previously unreported raises, some of which were granted using the drinking water authority and others achieved by changing the employees' job classifications.

In mid-February, Forrest McMurray, an advance staffer from Oklahoma and, like Hupp, a relatively recent college graduate, saw his salary increase 25 percent through the same SDWA process that was later applied to Greenwalt and Hupp. (Bloomberg News had initially reported on Monday that the third raise granted via that process was to Samantha Dravis, the association administrator running the Office of Policy. But the third salary increase corresponds with McMurray's employment information, and Bloomberg removed Dravis' name from an updated version of its article.)

A fourth aide, speechwriter Lincoln Ferguson, received 25 percent pay increase last September after receiving a renewed position with the SDWA authority. Ferguson worked for Pruitt when he was Oklahoma attorney general.

Pruitt signed off on the raise for Ferguson, but not McMurray, according to the IG report.

Two other political appointees — Liz Bowman, the associate administrator for the Office of Public Affairs, and Kevin Chmielewski, the advance staffer who last week made allegations about mismanagement and wrongdoing at EPA to both Democrats and Republicans — appear to have received raises of more than 20 percent last summer when their employment classification was increased. Chmielewski departed the agency in mid-February.

Brittany Bolen, the senior deputy associate administrator in the Office of Policy, had received a 1.6 percent raise last summer when she underwent the same increase in classification.

The IG report was part of a larger investigation into EPA's use of a special hiring authority under the SDWA, which allows Pruitt to hire up to 30 staffers without having to go through normal hiring procedures or subjecting the staffers to the Trump administration's ethics pledge.

The SDWA authority was intended to allow EPA to bring on board engineers or scientists with subject matter expertise. Democratic critics alleged that Pruitt used it to get key political appointees in place quickly or to bypass ethics issues, and asked for the IG to review the matter. But EPA has dismissed those criticisms.

"Salary determinations for appointees are made by EPA's chief of staff, White House liaison, and career human resources officials. Salaries are based on work history; and, any increases are due to either new and additional responsibilities or promotions," EPA spokesman Jahan Wilcox said.

AMERICAN OVERSIGHT

Records released last summer by EPA show that a dozen EPA political staffers were working in "administratively determined" positions as of mid-July 2017, while another 22 had been converted to permanent political appointees or left the agency.

Among those still working under the special hiring authority at that time were Nancy Beck, the deputy for EPA's chemicals office; Byron Brown, Pruitt's deputy chief of staff; air adviser Mandy Gunasekara; and a number of public affairs officials, including Michael Abboud, James Hewitt, Ferguson and Wilcox. Their status may have changed since.

The IG's audit of EPA's use of the hiring authority will continue, with a final report expected at a later date.

Oversight will interview two more Pruitt aides this week Back

By Anthony Adragna | 06/28/2018 02:47 PM EDT

House Oversight Committee staff are interviewing former EPA policy adviser Samantha Dravis today as they continue their probe into allegations of lavish spending and unethical behavior by Administrator Scott Pruitt, a committee aide confirmed.

In addition, staff plan to interview Pruitt's chief of staff Ryan Jackson on Friday, the aide said.

Dravis and Jackson's interviews come after the committee already spoke with multiple other members of Pruitt's inner circle: former security chief Pasquale "Nino" Perrotta, scheduler Millan Hupp and senior EPA counsel Sarah Greenwalt.

Chairman Trey Gowdy (R-S.C.) had also requested an interview with former deputy chief of staff turned whistleblower Kevin Chmielewski by June 22, but it's not immediately clear when that interview will occur.

The latest interviews were first reported by E&E News.

Tester launches new TV ad on public lands Back

By Zach Montellaro | 06/28/2018 02:43 PM EDT

Sen. Jon Tester (D-Mont.) launched a new statewide ad called "Not for Sale," touting his stance on public lands and featuring video of Tester speaking with hunters and fishermen.

The positive ad opens with the senator talking about his family's roots in the state — "My family has made a living off the land in Montana for over 100 years," Tester says — and features a Montanan praising him, saying "he understands the importance of public lands to Montanans and his values are our values."

"As long as I'm in the U.S. Senate, Montana is not for sale," Tester says at the end of the ad.

Tester is facing Republican state Auditor Matt Rosendale in November.

White House wants Trump to nominate a justice before Putin trip Back

By Nancy Cook | 06/28/2018 05:07 PM EDT

The White House hopes to have a Supreme Court nominee chosen by the time President Donald Trump leaves for his European trip on July 10, according to one Republican close to the White House and one person involved with the judicial selection process.

The White House is expected to start interviewing candidates early next week, with the White House's top attorney, Don McGahn, leading that process. The goal is to hold confirmation hearings in August or September, so that any confirmed justice can join the court in early October, before the next term.

Top contenders include Raymond Kethledge, Thomas Hardiman, Amy Coney Barrett, Brett Kavanaugh, and Amul Thapar — though the person involved with the process stressed that other potential nominees from Trump's list of judges could also get a "hard look."

Trump and a cadre of yet-to-be-determined senior administration officials are expected to interview a handful of finalists, similar to how the White House handled the selection of Trump's first Supreme Court pick, Neil Gorsuch.

"The administration has already been through this once, so that really helps a lot. There is already a system in place," said the person involved with the process.

Several outside groups including the Koch-backed Americans for Prosperity and Judicial Crisis Network are expected to help to push the Republican nomination, especially once Trump announces his nominee.

The Judicial Crisis Network spent more than $10 million to support the Gorsuch confirmation, and JCN chief counsel Carrie Severino predicted the group's spending would exceed that figure this time around. With Democrats aiming to persuade moderate Republicans to block a nominee, she added, "this nomination will be more contentious."

But after months of the president dividing his party over thorny issues like immigration and trade, the Kennedy retirement offers a unique opportunity to motivate Trump's base and, potentially, to mobilize voters frustrated with Trump to turn out the GOP in the midterm elections anyway.

"Republicans have been looking for an issue to ensure their base turns out in November, and I think we've found it with the Supreme Court pick," said Andy Surabian, a Republican strategist and former special assistant to the president and White House deputy strategist in the Trump administration. "I know the pick will happen before the elections, but messaging-wise, I don't think you can have a better one than: 'Do you want the party of Maxine Waters deciding the fate of the Supreme Court?'"

AMERICAN OVERSIGHT

The president seemed ecstatic about the open seat during a Wednesday evening rally in North Dakota. There, he pledged to select a judge who could serve for 40 to 45 years before doing his best to give supporters a sense of urgency about the need for continued Republican control Congress.

"Justice Kennedy's retirement makes the issue of Senate control the vital issue of our time," Trump said. "It's one of most important things we can do.

This opening gives the White House a chance to energize its base for an election many had expected to favor the Democrats. And it calms some tension inside the administration about what messages Republicans should emphasize in the midterms — the tax bill, economy, work on opioid addiction and drug prices, or hard-line immigration policies.

"It's the policy issue of Supreme Court nominations, not tax cuts, that truly unites the Republican Party, as evident by President Trump's debate answer on this topic that fueled his home-stretch spring in 2016," said Jason Miller, a former top aide to Trump during the campaign and transition.

In recent weeks, Republicans have been split apart by the questions of potential tariffs or hard-line immigration moves. While tariffs and a border wall fire up Trump's base of white, working-class voters, those issues have not resonated as well within the business, donor, or establishment Republican community.

Republican leadership on the Hill had hoped that in 2018 Trump's midterm message would focus primarily on the healthy state of the economy and the Republican tax bill of 2017, yet the president himself has had trouble sticking to that message at several recent rallies.

Yet a Supreme Court nomination — which ultimately could affect health care, abortion rights, affirmative action, freedom of religion and speech, guns rights, and corporate regulations - brings together the disparate coalitions of the Republican Party.

Already the anti-abortion group, SBA List, has volunteers on the ground in Ohio, Florida and Indiana going door-to-door to try to woo female voters, Hispanics, and Democrats to support anti-abortion legislation. They just hired field staff to allow them to expand the operation into North Dakota and West Virginia, home states of two vulnerable Senate Democrats, Heidi Heitkamp and Joe Manchin, respectively.

"The Senate is where Supreme Court picks are confirmed. That is one of our driving reasons for engaging at this level," said Mallory Quigley, a spokesperson for SBA List.

On Thursday night, Trump met with a group of bipartisan senators, including Democrats Heitkamp, Manchin and Joe Donnelly and moderate Republicans Susan Collins and Lisa Murkowski, to discuss the Supreme Court vacancy.

Just as they hope to unite conservatives, Republicans are hoping the issue divides Democrats. Already the White House is eyeing the 10 Democratic senators up for reelection

AMERICAN OVERSIGHT

this fall in states that Trump overwhelmingly won in 2016 — and hoping to pressure them into supporting the nominee.

The greatest hope of Trump advisers is that a Supreme Court pick will dominate the news so much that it will not allow Democrats to talk about their vision for health care or the economy or taxes — or to present any positive, forward-looking message.

"There will be no Democratic messaging on jobs, the economy or health care that cuts through, as many will be focused on hypothetical culture wars that make suburban swing voters uneasy," Miller said.

Eliana Johnson contributed to this report.

Cornyn: Supreme Court confirmation vote likely after Labor Day Back

By Elana Schor | 06/28/2018 12:51 PM EDT

The second-ranked Senate GOP leader on Thursday suggested the Supreme Court confirmation vote to replace Anthony Kennedy would take place sometime in September, saying he "would be shocked" if the vote happened before Labor Day.

Majority Whip John Cornyn (R-Texas) added that he is "not opposed" to moving President Donald Trump's nominee more quickly, but he noted that background checks on Trump's still-unnamed pick are likely to take time.

Republicans have already made clear that they don't plan to heed Democratic calls for a delay in the Supreme Court confirmation until after November's election to give midterm voters a chance to weigh in.

Supreme Court nominees since the Ford administration spent an average of 67 days between their nomination and final confirmation, according to a 2015 report from the Congressional Research Service — a window that Cornyn told reporters he "would endorse" as a goal. Of course, that figure doesn't include President Barack Obama's Supreme Court nominee, Merrick Garland, whom Republicans blocked and denied a confirmation hearing in 2016.

Republican senators anticipate dedicating much of August to passing appropriations bills, meaning that a final Supreme Court vote would wait until September. The high court's next term is set to begin on the first Monday of October.

Senate Judiciary Chairman Chuck Grassley (R-Iowa), however, declined to commit to any

AMERICAN OVERSIGHT

timetable.

"Everything is going to be judged by when the president makes an appointment and what [Majority Leader Mitch] McConnell wants to schedule," Grassley said. At this point, it's all speculation. And there's no point in speculating."

Cornyn also cautioned Trump against selecting any nominee with a publicly stated position on overturning court precedents such as Roe v. Wade.

"I think that would be a terrible mistake, for the president to nominate somebody who had that sort of agenda," Cornyn told reporters, adding that "we don't need judges who have either personal or political or ideological agendas, in my view. And I think that ought to comfort all of us."

It's common for presidents of both parties to avoid picking a nominee with a lengthy paper trail for opponents to seize on, though Trump has previously said he would want to appoint anti-abortion judges to the high court.

One member of Trump's Supreme Court shortlist, Sen. Mike Lee (R-Utah), has championed anti-abortion legislation, although he suggested Thursday that Roe might be safer after Kennedy's retirement than some on the left have argued.

Senate passes farm bill with flood insurance extension Back

By Zachary Warmbrodt | 06/28/2018 06:09 PM EDT

The Senate today passed a farm bill, H.R. 2 (115), that includes a provision reauthorizing the National Flood Insurance Program before it expires in the middle of hurricane season — a victory for coastal lawmakers.

But with time running out before the program's July 31 expiration date, and the enactment of the farm bill not a sure bet by then, senators are already looking at other vehicles to attach a short-term extension.

John Kennedy (R-La.) said he's looking at an upcoming FAA bill. Kennedy and Bill Cassidy (R-La.) pushed for the six-month reauthorization in the farm bill this week, and they've also introduced the extension as stand-alone legislation.

"We're not going to let this program expire," Kennedy said. "If lightning strikes and we get

AMERICAN OVERSIGHT

a [long-term] reform bill by the 31st, that would be great. But it's not likely to happen."

Cincinnati Enquirer: EPA Head Scott Pruitt in Cincinnati

U.S. Environmental Protection Agency Administrator Scott Pruitt visited Cincinnati Monday. He spent part of his day Monday, according to a tweet, with Greater Cincinnati Water Works officials and workers regarding the replacement of lead pipes. He also visited the federal EPA's Cincinnati Office of Research and Development near the University of Cincinnati. "This is a model for cities across the country should look at in order to invest in the future of our children," Pruitt tweeted.

Bloomberg Environment: Pruitt Seeks Quicker Superfund Cleanups at Three Targeted Sites

EPA Administrator Scott Pruitt put the spotlight on three more Superfund sites to accelerate cleanup efforts after the agency targeted those sites for a lack of progress. The Environmental Protection Agency named the sites in California, Delaware, and Minnesota April 16 after the agency's regional staff said they needed a push from the administrator, Albert "Kell" Kelly, Pruitt's senior adviser on Superfund issues, told Bloomberg Environment.

Tulsa World: EPA Finalizes Guidelines to Ebb Illinois River, Tenkiller Lake Pollution

AMERICAN OVERSIGHT

After decades of disagreement and litigation, it appears Arkansas and Oklahoma finally will be operating off the same page when it comes to Illinois River and Tenkiller Lake pollution sources. Longtime Illinois River advocates were glad to see the Environmental Protection Agency's announcement Monday of long-awaited pollution guidelines for the watershed. "I'm certainly glad to hear this," said Ed Brocksmith, a founder of the group Save The Illinois River, who said for a Tulsa World article just a few weeks ago that he feared years of cooperative efforts in the hands of the EPA had "fallen into a black hole." "It's definitely a step forward," he said Monday.

Las Vegas Review Journal: Nevada's Anaconda Mine Removed from EPA Superfund List

An agreement reached between Nevada and the Environmental Protection Agency has kept the Anaconda Copper Mine off a Superfund list, with cleanup now being directed by the state and funded by a private company, officials said Monday. Pruitt released a list of potential Superfund sites Monday that no longer includes the Nevada mine. The list also excludes the San Jacinto River Waste Pits in Texas. Three sites in California, Delaware and Minnesota were targeted by the EPA for immediate and intense cleanup efforts and put on a list for Superfund inclusion. "We are making tremendous progress expediting sites through the entire Superfund remediation process," Pruitt said in a statement. Pruitt said the updated list "reflects our commitment to addressing Superfund sites as quickly and safely as possible."

Bloomberg Environment: Smaller Bites in EPA Air Chief's Second Pass at Permitting Updated

William Wehrum has unfinished business with the EPA's air pollution permitting program for factories and power plants that want to expand or make major upgrades to their facilities. "This time around," Wehrum told Bloomberg Environment in an exclusive April 13 interview, "it's important to strike a better balance." Already, the EPA has issued two industry-coveted tweaks to the permitting program through guidance documents.

the public gallery.

Washington Free Beacon: Ex-CIA Chief Says Obama Rejected Cyber Action Against Russia for Election Meddling

Despite an unprecedented Russian intelligence operation to influence the 2016 presidential election, former President Barack Obama rejected a plan to conduct retaliatory cyber action against Moscow during the campaign, according to former CIA Director John Brennan. Brennan disclosed Saturday that Obama opposed a plan to carry out "a cyber event" against the Russians because the former president feared the action would lead to more aggressive interference by Moscow.

Politico: Comey on Trump Calling for Him to Be Jailed: 'This Is Not Ok'

Former FBI Director James Comey denounced Donald Trump's presidency as a threat to bedrock American values, warning that the president's calls for Comey to be jailed could erode the rule of law. The former FBI director, whom Trump fired last spring, has been a frequent target of Trump's criticism, especially in recent days amid the start of a publicity tour for Comey's book, which was released Tuesday. Comey has been deeply critical of the president, characterizing him as morally unfit to occupy his office, while Trump has labeled the former FBI director as a liar and leaker, suggesting he be sent to jail.

TRUMP TWEETS

Cincinnati Enquirer

https://www.cincinnati.com/story/news/2018/04/16/epa-head-scott-pruitt-cincinnati/521380002/

EPA Head Scott Pruitt in Cincinnati

By Carrie Blackmore Smith, 4/16/18

U.S. Environmental Protection Agency Administrator Scott Pruitt visited Cincinnati Monday.

He spent part of his day Monday, according to a tweet, with Greater Cincinnati Water Works officials and workers regarding the replacement of lead pipes. He also visited the federal

AMERICAN OVERSIGHT

EPA's Cincinnati Office of Research and Development near the University of Cincinnati.

"This is a model cities across the country should look at in order to invest in the future of our children," Pruitt tweeted.

Cincinnati, like many older cities, constructed its system with lead pipes at the start of the last century.

Water Works has made it a priority to replace all lead pipes with copper in order to reduce exposure to lead in drinking water. Lead can cause all sorts of health problems, including developmental delays, high blood pressure and heart disease.

“We appreciated the visit today from Administrator Pruitt. The visit gave us a chance to explain our enhanced lead program that includes education, outreach and removal of lead service lines," said water works Director Cathy Bailey. "Our program wasn’t mandated by regulations, but implemented because it is the right thing to do for our community, and we believe it can serve as a model across the country."

New research found a correlation between lead and cardiovascular disease, too. It affects children at a higher rate than adults because their brains are still developing.

The response in Twitter was fierce, with some playing off his use of #gettheleadout.

Bloomberg Environment

https://news.bloombergenvironment.com/environment-and-energy/pruitt-seeks-quicker-superfund-cleanups-at-three-targeted-sites-1

Pruitt Seeks Quicker Superfund Cleanups at Three Targeted Sites

By Sylvia Carignan and Stephen Joyce, 4/16/18

EPA Administrator Scott Pruitt put the spotlight on three more Superfund sites to accelerate cleanup efforts after the agency targeted those sites for a lack of progress.

The Environmental Protection Agency named the sites in California, Delaware, and Minnesota April 16 after the agency’s regional staff said they needed a push from the administrator, Albert “Kell” Kelly, Pruitt’s senior adviser on Superfund issues, told Bloomberg Environment.

Kelly expects that push to come in the form of an expedited cleanup plan decision or quicker negotiations for each of the sites.

AMERICAN OVERSIGHT

Pruitt also removed two sites from the list of those needing immediate action.

The sites EPA added to the list are Delaware Sand and Gravel Landfill in New Castle, Del., Casmalia Resources in Casmalia, Calif., and St. Regis Paper Co. in Cass Lake, Minn.

Kelly said hard and fast criteria aren't necessarily used when adding sites to the administrator's list.

"The criteria has some subjectivity to it, because it has to be sites [where] regions believe attention from the administrator will help them get to whatever milestone," Kelly said.

Cass Lake, Minn.

Pruitt aims to finalize a residential soil cleanup plan for the St. Regis Paper Co. site.

Remediating the Minnesota site "has been a very long and difficult process," Sara Peterson, a lawyer representing Cass Lake, Minn., the city where the property is located, told Bloomberg Environment.

The site contains soils and groundwater possibly contaminated by dioxins, pentachlorophenol, and polycyclic aromatic hydrocarbons, according to an EPA fact sheet on the site.

From the 1950s to the 1980s, Champion Paper Co.—a predecessor company to the site's current owner, Memphis, Tenn.-based International Paper Co.—manufactured treated wood for railroad ties and telephone poles.

Thomas Ryan, a spokesperson for International Paper, told Bloomberg Environment the company is working with the EPA and other parties at the Superfund site.

The city is anxious for the site's environmental cleanup to be completed, Peterson said.

"They need the jobs that would come with the redevelopment of this site, and they've got some potential opportunities out there. But having a Superfund site there at this point makes it awfully hard to market the site," she said.

A March 2016 EPA-proposed plan recommended removing contaminated soil from affected residential areas and replacing it with clean soil, managing removed soil on site, disposing of a small amount of heavily contaminated soil at an off-site facility, and monitoring soil stored on site.

Casmalia, Calif.

The Casmalia Resources site in California was a commercial hazardous waste treatment, storage, and disposal facility spanning more than 250 acres.

The EPA finalized a $590,722 settlement in November with 57 of the companies that contributed

AMERICAN OVERSIGHT

waste to the landfill. Those companies include Nestle, Leidos Inc., Hubbell Inc., and Hearst Corp.

None of those companies responded to Bloomberg Environment's emails or calls about the site's addition to Pruitt's list.

In addition, companies and government agencies involved with the Delaware site did not respond to Bloomberg Environment's requests for comment.

Setting Deadlines

The EPA also provided updates April 16 about each of the other sites on Pruitt's "immediate, intense action" list.

At the Mohawk Tannery site in Nashua, N.H., the agency wants to propose a cleanup plan this summer. The EPA is negotiating an agreement with a prospective purchaser who would redevelop the site.

For two New Jersey sites, American Cyanamid Inc. in Bound Brook and Berry's Creek in Wood Ridge borough, the agency wants to propose cleanup plans by the end of this spring.

The agency also wants to propose a cleanup plan for the Superfund site in East Chicago, Ind. his summer. The EPA is working on cleaning up lead-contaminated soil at parts of the site.

Delisted Sites

Pruitt already has made major cleanup decisions at the two sites removed from the list, the Anaconda Copper Mine in Yerington, Nev., and San Jacinto River Waste Pits outside Houston.

The EPA agreed in February to allow Nevada to oversee the cleanup of the Anaconda site, owned by Atlantic Richfield Co., after the state sought to assume control and work with private parties for a quicker resolution.

The former mine site had been under consideration to be added to the EPA National Priorities List so it could qualify for long-term cleanup and federal funding. The state last year asked the agency to defer the mine listing except for areas on tribal lands.

The San Jacinto River Waste Pits site contains paper mill waste material, including highly toxic dioxins, generated in the bleaching of wood pulp to make paper, the EPA said.

Pruitt announced a $115 million plan in October for the pits that entails excavating more than 212,000 cubic yards of contaminated waste.

Superfund sites are the most contaminated in the country, and include the Gowanus Canal in New York, Portland Harbor in Oregon, and Tar Creek in Oklahoma. Properties with EPA's Superfund designation are eligible to receive federal funds for cleanup, though the agency aims

AMERICAN OVERSIGHT

to compel companies responsible for the sites to pay the cleanup bills.

EPA Finalizes Guidelines to Ebb Illinois River, Tenkiller Lake Pollution

By Kelly Bostian, 4/16/18

Long-awaited rules mean Arkansas and Oklahoma agencies will operate off same page

After decades of disagreement and litigation, it appears Arkansas and Oklahoma finally will be operating off the same page when it comes to Illinois River and Tenkiller Lake pollution sources.

Longtime Illinois River advocates were glad to see the Environmental Protection Agency's announcement Monday of long-awaited pollution guidelines for the watershed.

"I'm certainly glad to hear this," said Ed Brocksmith, a founder of the group Save The Illinois River, who said for a Tulsa World article just a few weeks ago that he feared years of cooperative efforts in the hands of the EPA had "fallen into a black hole."

"It's definitely a step forward," he said Monday.

Phosphorous and nitrates from wastewater plants, poultry producers, industry and other sources caused algae to grow in the river and changed the habitat. The pollutants can cause algal blooms that lead to low dissolved oxygen and fish die-offs in the lake. Increased erosion and sedimentation in the river and lake also are issues.

What the EPA approved are working models for the river and the lake that address the long-debated water quality factors, most notably "total maximum daily load" for phosphorus and nitrates. In coming weeks and months, Oklahoma and Arkansas agencies and stakeholders will review the models and discuss implementation and enforcement of those rules.

The Oklahoma Water Resources Board planned to discuss the guidelines in its meeting in Oklahoma City Tuesday morning. Oklahoma Secretary of Energy and Environment Michael Teague met with his cabinet and other state agency leaders Monday.

"What we have now is a template that is concise and clear and user-friendly," said Ed Fite, vice president of water quality for Grand River Dam Authority. "The homework assignment now is for the two states to put together a framework of how it all comes together."

AMERICAN OVERSIGHT

Teague said his office, Arkansas state leaders, agency leaders of both states and Cherokee tribal leaders have worked with the EPA throughout the process.

"The models (for the river and Tenkiller Lake) say, 'here is the tool we're all going to use,' " Teague said. "Now we can look at it and say, 'now if we put this regulation change in place here, then what does that impact throughout the system?' It gives everyone a common platform."

EPA Regional Administrator Anne Edsal urged that continued cooperation.

"Over the years, we have made great progress by working with states, tribes and local agencies in improving conditions throughout the watershed and we look forward to continuing this effort," she said.

After years of disagreement between the states, a Statement of Joint Principles and Action was signed in 2003 in an effort to avoid litigation and further scientific understanding of the situation at hand.

The agreement fell short in the eyes of Oklahomans, who filed suit against poultry producers in a lawsuit that concluded in 2008 but has yet to see a ruling from the presiding judge.

Cooperative efforts increased after the lawsuit and in 2013 the states extended the agreement, enlisted the help of Baylor University as a neutral third party to complete water quality studies, and in 2016 the reports and suggested models were given to the EPA for finalization.

"Now the states and other entities can begin finding agreement on how to achieve Oklahoma Scenic River water quality standards," said Denise Deason-Toyne, president of non-profit Save the Illinois River group. "We are anxious to see the modeling for phosphorous, the primary nutrient that is over fertilizing our scenic rivers and Tenkiller Lake. Sedimentation is also a big problem, which must be addressed."

The Oklahoma-Arkansas Scenic Rivers Joint Phosphorus Study, part of the cooperative effort started in 2003, found that a 0.037 ppm total maximum daily load was appropriate for the river with the help of Baylor University researchers. The guideline is one that Arkansas interests initially thought to be arbitrary and too restrictive.

Teague said his understanding is the new models follow that 0.037 recommendation but he said the states will have to make it official.

Fite said that from his discussions with Arkansas leaders and stakeholders, the guidelines will be welcomed.

"People have been just waiting for the ambiguity to be firmed up and have a number so they can actually plan, design and fund and implement (their plans)," he said.

Teague said collaboration between states, agencies and stakeholders has been a superior process

AMERICAN OVERSIGHT

to legal wrangling of the past.

"Collaboration is how you get everything done," he said. "It's how we addressed earthquakes, it's this same type of thing, and now we have Arkansas and Oklahoma and EPA Region 6 and the Cherokee Nation all working together and improving this watershed."

Las Vegas Review Journal

Nevada's Anaconda Mine Removed From EPA Superfund List

By Gary martin, 4/16/18

An agreement reached between Nevada and the Environmental Protection Agency has kept the Anaconda Copper Mine off a Superfund list, with cleanup now being directed by the state and funded by a private company, officials said Monday.

Nevada Gov. Brian Sandoval and EPA Administrator Scott Pruitt signed a National Priorities List Deferral Agreement on Feb. 5 that puts the state in control of expedited cleanup and preparation for reuse of the property.

"Since Governor Sandoval took office and before, the state has worked to develop a long-term plan to clean up the site with a secure source of funding," said Mary-Sarah Kinner, the governor's spokeswoman.

Pruitt released a list of potential Superfund sites Monday that no longer includes the Nevada mine.

The list also excludes the San Jacinto River Waste Pits in Texas. Three sites in California, Delaware and Minnesota were targeted by the EPA for immediate and intense cleanup efforts and put on a list for Superfund inclusion.

"We are making tremendous progress expediting sites through the entire Superfund remediation process," Pruitt said in a statement.

Pruitt said the updated list "reflects our commitment to addressing Superfund sites as quickly and safely as possible."

The EPA administrator visited the Nevada and Texas sites as part of his effort to make timely decisions for cleanup of the sites and ensure protection of health and the environment for the

AMERICAN OVERSIGHT

surrounding communities.

During the Obama administration, the EPA proposed adding the Anaconda Copper Mine, which opened in 1918, to the Superfund National Priorities List to make it eligible for federal remedial funds.

Last year Atlantic Richfield Co. approached Nevada and proposed to fund implementation of a sitewide remedy for the mine. The company bought the mine in 1978.

Sandoval asked EPA in July to defer placing the copper mine on the Superfund list. Sandoval, the Nevada Division of Environmental Protection, Native American tribes and other stakeholders worked with the EPA to keep the site off the national priorities list.

Pruitt granted the request after the EPA determined cleanup efforts meet federal requirements.

In February, Sandoval called the signing of the agreement with the EPA a "landmark day." He said the state and Atlantic Richfield would work in partnership on the remaining cleanup, which is expected to take another decade.

The Trump administration has proposed cutting spending at the EPA, and funds for the Superfund program.

With cleanup under administration by the state, and Atlantic Richfield pledging to fund the process, state officials see the decision on a deferred listing as a move to secure funding for cleanup of leaching fields at the old mine where chemicals were used to strip copper from rock.

As a result of this public-private partnership, there was no need for the EPA administrator's office to continue tracking the mine site, Kinner said. The site will remain proposed for the national priority list until cleanup is completed under Nevada Division of Environmental Protection oversight.

Cleanup actions under the Superfund program have historically been slow, expensive and process-laden, according to the state agency.

The mine is located in Lyon County near the town of Yerington.

Bloomberg Environment

Smaller Bites in EPA Air Chiefs Second Pass at Permitting Update

By Jennifer Lu, 4/16/18

AMERICAN OVERSIGHT

William Wehrum has unfinished business with the EPA's air pollution permitting program for factories and power plants that want to expand or make major upgrades to their facilities.

In his first stint at the Environmental Protection Agency in an acting capacity, Wehrum tried to address industry criticism over the permitting program, known as new source review, with sweeping rulemaking bundles.

His efforts were either dropped after the George W. Bush administration withdrew his nomination to head the Office of Air and Radiation in 2007, blocked by the courts, or undone by the incoming Obama administration.

"This time around," Wehrum told Bloomberg Environment in an exclusive April 13 interview, "it's important to strike a better balance."

Already, the EPA has issued two industry-coveted tweaks to the permitting program through guidance documents.

The new source review program requires factories and power plants to install costly new air pollution controls when they expand or make modifications that increase their emissions.

Industries have long complained that securing compliance with the permitting program is tedious, time consuming, and confusing. Updating how the EPA administers the program through guidance documents is one way to quickly address those concerns.

"There are a lot of current issues within [new source review] that we can provide clear guidance through guidance," Wehrum said. "Our strategy is to tell people sooner rather than later how we think the program should be implemented."

Did You Get the Memo?

The focus on bite-sized updates to EPA programs comes after Wehrum watched a series of ambitious regulations he helped craft—from toxic air pollution rules from the power industry to attempts to set up an emissions trading program for power plants—get overturned by judges during his last go-round at the agency between 2005-2007.

Back then, Wehrum didn't have the option to quickly update policy through guidance. Only since a 2014 U.S. Supreme Court decision in Perez v. Mortgage Bankers Association have federal agencies like the EPA been allowed to issue guidance such as policy memos without having to go through a lengthy public comment process.

"We have an interest in trying to do some things quickly, and especially in case-specific circumstances where clarity is lacking," Wehrum said.

AMERICAN OVERSIGHT

However, policy made through guidance memos can be just as easily undone by a new administration, John Walke of the Natural Resources Defense Council, who previously served in the EPA General Counsel's Office, told Bloomberg Environment.

Environmental groups like Walke's and some states have already sued the EPA over one of its guidance documents, which eased toxic pollution emissions standards for industry.

"Industry relies upon Bill Wehrum's guidance at its peril," Walke said.

Everything Old is New Source Review Again

But updating the permitting program has long been an industry priority. It was repeatedly spotlighted by businesses when the EPA put out a call for regulations that should be revised or eliminated.

After past regulatory efforts to make it industry-friendly fizzled, the fastest way to address business concerns is through guidance, Richard Alonso, environmental attorney at Sidley Austin LLP's Washington, D.C., office, told Bloomberg Environment.

Already, the EPA has issued two memos on two new source review changes. A December memo told agency staff not to "second-guess" how facilities calculate emissions changes.

That was followed by a March memo on project emissions accounting, also known as project netting, which tells facilities how to calculate whether emissions from their proposed new construction projects would increase pollution. Under the new guidance, facilities can include emissions decreases from their projects to the overall calculations to avoid triggering new source review.

The memo drew inspiration from a 2006 rule changing three aspects of emissions counting under new source review, which lost traction after Wehrum left the agency.

"Finalizing this [2006] rulemaking would help to remove a substantial burden to energy and manufacturing projects," Louis Renjel, vice president of federal government affairs and strategic policy at Duke Energy, wrote in response to an EPA call for suggestions on reducing regulatory burdens.

The American Chemistry Council also asked the EPA to revisit the reforms proposed during the Bush-era EPA, whether through guidance, regulation, or legislation.

The EPA this summer aims to address project aggregation, another piece of new source review reform from Wehrum's 2006 rulemaking bundle.

It would define how emissions from separate modifications that take place around the same time should be counted, according to a presentation Anna Marie Wood, director of the EPA's Air Quality Policy Division, gave at a state air regulators conference April 5.

AMERICAN OVERSIGHT

More Guidance Coming

Three more guidance memos are slated to be issued this spring, according to Wood's presentation.

One would redefine what counts as "ambient air," or the air the general public breathes. This definition is important to new source review because facilities must show that their post-construction emissions won't worsen air quality according to the national standards, Lynn Hutchinson, the EPA new source review project lead in 2002, told Bloomberg Environment.

Another guidance document in the works would change the pollutant modeling used to decide whether emissions would damage air quality. The White House completed its review of the memo April 12.

A third spring guidance document would allow the EPA to revive an attempt to expand the kinds of routine maintenance and repairs excluded from new source review. That 2003 rule was vacated by the U.S. Court of Appeals for the District of Columbia Circuit in New York v. EPA in 2006, which said industries could not write off physical changes that cost below a certain amount as routine maintenance.

"You already have a court on record saying those particular reforms are not allowed, so those might be a heavier lift without notice and comment rulemaking," Alonso said.

When asked how he will ensure that his current batch of reforms stick beyond the current administration, Wehrum said, "a piece of it is making change that will last, but the bigger piece of it, for me, again, is just from a public policy standpoint."

"If people can't look at our rules and know what they need to do to comply, then we've got a problem," he said.

Reuters

https://www.reuters.com/article/us-usa-trump-russia-cohen/foxs-hannity-revealed-as-mystery-client-of-trumps-personal-lawyer-idUSKBN1HN12G

Fox's Hannity Revealed as Mystery Client of Trump's Personal Lawyer

By Brendan Pierson, Karen Freifeld, Jonathan Stempel, 4/16/18

U.S. President Donald Trump's personal lawyer was forced on Monday to reveal in a New York federal court that Fox News personality Sean Hannity, one of Trump's most ardent defenders, was also on his client list.

AMERICAN OVERSIGHT

Michael Cohen, Trump's fiercely loyal and pugnacious lawyer, disclosed Hannity's name through one of his own lawyers at the order of the judge. Stormy Daniels, an adult-film actress who says she had a sexual encounter with Trump, watched from the public gallery.

Daniels, in a separate civil case, is fighting a 2016 non-disclosure agreement arranged by Cohen in which she got $130,000 to stop her from discussing her claim she had sex with Trump a decade earlier, something Trump has denied.

Hannity, 56, said on Monday that he had never paid for Cohen's services or been represented by him, but had sought confidential legal advice from him. The conservative host often uses his weeknight broadcast on Fox News to defend the president against what he sees as biased attacks by the media. Sometimes Trump praises Hannity in return.

Cohen was in court to ask the judge to limit the ability of federal prosecutors to review documents seized from his offices and home last week as part of a criminal investigation, which stems in part from a probe into possible collusion between Trump's presidential campaign and Russia. (Full Story)

The Russia investigation has frustrated the White House as it has spread to enfold some of Trump's closest confidantes.

Judge Kimba Wood spent more than 2-1/2 hours listening to arguments by Cohen's lawyers, prosecutors from the U.S. attorney's office in Manhattan and a lawyer representing Trump in the hearing. She is expected to rule later.

She ordered prosecutors to give Cohen's lawyers a copy of the seized materials before the next hearing.

The unexpected naming of Hannity made him the latest prominent media personality to be drawn into the investigation's cast of unlikely supporting characters.

Daniels, whose real name is Stephanie Clifford, was another. As she arrived at the courthouse dressed in a lavender suit, photographers knocked over barricades as they scrambled to get pictures.

Daniels sat with her lawyer, Michael Avenatti, who told reporters they were there to help ensure protection for the integrity of the seized documents, some of which they believe pertain to the Daniels agreement.

Cohen, dressed in a dark suit, at times looked tense, folding and clasping his hands in front of him.

GASPS AND LAUGHTER

Cohen has argued that some of the documents and data seized from him under a warrant are

AMERICAN OVERSIGHT

protected by attorney-client privilege or otherwise unconnected to the investigation. But Judge Wood said she would still need the names of those other clients, and rejected his efforts to mask the identity of Hannity, a client Cohen had said wanted to avoid publicity.

"I understand if he doesn't want his name out there, but that's not enough under the law," Wood said, before ordering the name disclosed.

Stephen Ryan, a lawyer for Cohen, drew gasps and laughter from the public gallery when he named Hannity as the client.

After his identity was revealed, Hannity said on his syndicated radio show, and again later on his Fox News program, that he had "occasional, brief discussions" with Cohen in which he sought out Cohen's "input and perspective."

Hannity said he assumed those discussions were covered by attorney-client privilege, and insisted that none involved any matter between himself and a third party. He also said his talks with Cohen "almost exclusively focused on real estate."'

Legal advice can be considered privileged even if given by a lawyer for free.

Hannity, the top-rated personality on the most watched U.S. cable news network, told his viewers on April 9 that the raid on Cohen was part an effort by federal investigators to wrongly impeach the president. He never mentioned his association with Cohen during that broadcast.

On Monday's show, Hannity expressed amusement at the firestorm of media coverage unleashed by the disclosure that he and Trump shared a legal adviser in Cohen, playing a 45-second, rapid-fire montage of various TV commentators and anchors uttering his name on the air throughout the day.

Cohen has asked the court to give his own lawyers the first look at the seized materials so they can identify documents that are protected by attorney-client privilege. (Full Story)

Failing that, they want the court to appoint an independent official known as a special master, a role typically filled by a lawyer, to go through the records and decide what prosecutors can see.

But prosecutors want the documents to be reviewed for attorney-client privilege by a "taint team" of lawyers within their own office, who would be walled off from the main prosecution team.

"I have faith in the Southern District U.S. Attorney's Office that their integrity is unimpeachable," making a taint team "a viable option," Judge Wood said.

But she also said that to help ensure fairness and the perception of fairness, "a special master might have some role here."

After the hearing, Cohen left without comment.

AMERICAN OVERSIGHT

Daniels, in contrast, stepped up to the bank of microphones set up on the sidewalk, telling reporters that Cohen had thought he was above the law.

“My attorney and I are committed that everyone finds out the truth and the facts of what happened, and I will not rest until that happens,” she said.

Washington Free Beacon

http://freebeacon.com/national-security/ex-cia-chief-says-obama-rejected-cyber-action-russia-election-meddling/

Ex-CIA Chief Says Obama Rejected Cyber Action Against Russia for Election Meddling

By Bill Gertz, 4/17/18

Despite an unprecedented Russian intelligence operation to influence the 2016 presidential election, former President Barack Obama rejected a plan to conduct retaliatory cyber action against Moscow during the campaign, according to former CIA Director John Brennan.

Brennan disclosed Saturday that Obama opposed a plan to carry out "a cyber event" against the Russians because the former president feared the action would lead to more aggressive interference by Moscow.

"There was consideration about rattling their cages with some type of cyber event," Brennan said during remarks to a journalism conference at the University of California Berkeley.

But based on Obama's fears, the planned cyber action was shelved in favor issuing vague warnings to Russian officials. Brennan did not elaborate on the cyber retaliation plan.

"President Obama was the ultimate decision-maker on that," Brennan said of the lack of response.

The former CIA director defended the Obama administration's handling of what is widely viewed as a significant counterintelligence failure during the presidential election.

After the election, Obama ordered the expulsion of 35 Russian intelligence officers.

Both the FBI and CIA are charged with the conducting counterintelligence–detecting and thwarting hostile intelligence operations. Both agencies failed to halt the Russians in 2016 either in the United States or abroad.

AMERICAN OVERSIGHT

U.S. officials have said the targeting of U.S. and foreign elections by Russia is continuing.

President Trump in February criticized his predecessor in a Tweet for failing to act. "Why didn't Obama do something about the meddling? Why aren't Dem crimes under investigation? Ask Jeff Sessions!" he tweeted.

The disclosure that Obama scrapped a cyber plan to retaliate against Moscow for election interference comes as a former senior counterintelligence official, Michelle Van Cleave, revealed in congressional testimony last week that the Obama administration weakened American counterintelligence programs by downgrading a top counterspy office.

Brennan said he had "great confidence" the Russian influence operation was authorized and directed by Russian President Vladimir Putin, a former KGB intelligence officer. The Russian intelligence services also "know what the mission is, know what their capabilities are, and will apply them to issues that are of interest to Russian national security," he said.

Brennan called the meddling "unprecedented in terms of its scope and intensity, and made full use of the digital domain."

The first indications of Russian interference were spotted in late 2015 and early 2016 and the operation was mentioned in press reports in the spring of 2016. By the summer of 2016 the operations were confirmed, he said.

Obama also made clear to the CIA that he did not want the agency doing anything "in reality or in perception" that would have advanced the Russian disinformation and propaganda campaign, Brennan said.

"We were really trying to strike the right balance between doing everything we could to prevent and thwart as well as to uncover and understand what the Russians were doing without doing anything that would almost advance their interests in trying to disrupt our election," he said.

Obama also was afraid any U.S. action against the Russians might be perceived as an outgoing Democratic president working to influence the election outcome.

"So if we did more things and stood at the hilltops and cried out, 'the Russians, the Russians are trying to help Trump get elected,' and if President Obama who is the titular head of the Democratic Party were to do that, I think that there would have been a lot of people would believe, I think with some justification, that the President of the United States was trying to influence the outcome of a presidential election," Brennan said.

Brennan also said the Obama administration opposed aggressive action because of the president's belief that any effort to punish the Russian might produce stepped up activities.

Russian hackers had been detected navigating inside state election voter registration roll computers and other election-related networks.

AMERICAN OVERSIGHT

"They had things that they could have done that they didn't do," Brennan said of the Russians.

Intelligence agencies concluded in a report issued in early 2017 that Russian civilian and military intelligence agencies conducted an aggressive operation to sow social discord during the 2016 election by opposing Hillary Clinton while seeking to boost Donald Trump's campaign.

The Russian operation included the use of advertising on social media platforms like Facebook, and cyber attacks involving the cyber theft of emails and postings online using covert internet personas.

In February, 13 Russians were indicted by Special Counsel Robert Mueller for running a St. Petersburg, Russia-based internet troll farm that carried out influence operations during the elections.

So far, no action has been taken against the Russian hackers engaged in email thefts.

Kenneth deGraffenreid, former deputy national counterintelligence executive, said Obama's inaction was a major counterintelligence failure.

"If Brennan's claims are true, the Obama administration's inaction in the face of this Russian cyber aggression represents a serious counterintelligence failure that has had terrible consequences," deGraffenreid said.

"Good counterintelligence requires an active element beyond collecting and analyzing the secret information that has been uncovered–namely countering this serious foreign intelligence threat in an effective way. The U.S. has the sophisticated tools to do this."

"There simply is no excuse for not doing so," he added. "Our national security depends on American leaders taking the action required."

Despite signs the operation had been underway since 2015, Brennan said he was the first U.S. official to protest the matter during an Aug. 4, 2016, telephone to Alexander Bortnikov, head of Russia's FSB security service.

"I told him rather directly that if the Russians were to go down this road, they would pay a significant price," Brennan said. "I told him that all Americans would be outraged by a Russian effort to try and interfere in our election."

A month later at the G-20 summit in China, Obama confronted Putin about the election interference, according to Brennan.

Weeks later, Director of National Intelligence James Clapper and Homeland Security Secretary Jeh Johnson issued an official statement accusing the Russian government of interfering with the election campaign.

Brennan said he believes the softline Obama policy dissuaded Moscow from intensifying the

AMERICAN OVERSIGHT

campaign and that he had no regrets.

Additionally, the former CIA chief said he has spoken to Obama who he asserted is "very comfortable with what we did and didn't do."

"I would argue that I think by pushing them back a bit and confronting them with it, both privately as well as publicly, I think we did dissuade them from even going further," he said.

Brennan also said the CIA was told by Obama not to take any action on the Russian intelligence operation over concerns any action would appear the administration was trying to support the Democratic candidate, Hillary Clinton.

Since leaving office, Brennan has been a Trump critic, taking to Twitter to call the president a "charlatan," "demagogue," and "snake oil salesman."

Brennan said that criticism has cost him financially as "a number of opportunities were rescinded."

Russian cyber intelligence operations are sophisticated and difficult to track, he said.

"And so I fully anticipate that the Russians and others are going to take advantages that are there," Brennan said. "They are going to try to hide their footprints better. They're going to try to prevent the U.S. from understanding what may be happening there. But let's not make a mistake, that environment is ripe for mal actors and they are going to continue to cause us problems."

On the controversial dossier produced by former British intelligence officer Christopher Steele, Brennan said the dossier may have been part of a Russian cover operation.

"Well certainly it could be," he said. "I don't know the provenance of the information. As I said I've seen the dossier. It is done by a former accomplished member of the British intelligence service, MI-6. It is sourced to unnamed sources and subsources that alleged these types of activities. So I don't know whether the information in it–some, all or none–is valid or not."

Brennan said he does not believe Steele was manipulated by the Russians for intelligence purposes.

"I do not believe he is acting on behalf of them," he said. "Might he have been unwittingly used? Maybe. So I don't know."

The Steele dossier was funded by the Democratic National Committee and the Clinton campaign through the research group Fusion GPS.

The Washington Free Beacon hired Fusion GPS to conduct research on Republican candidates but had no role in the dossier.

On his political views, Brennan said he is not a member of any political party and described

AMERICAN OVERSIGHT

himself as "an avowed nonpartisan."

In 2016, Brennan disclosed that in 1976 he voted for the Moscow-backed Communist Party USA candidate for president, Gus Hall, during the height of the Cold War.

Politico

Comey on Trump Calling for Him to Be Jailed: 'This Is Not OK'

By Louis Nelson, 4/17/18

Former FBI Director James Comey denounced Donald Trump's presidency as a threat to bedrock American values, warning that the president's calls for Comey to be jailed could erode the rule of law.

The former FBI director, whom Trump fired last spring, has been a frequent target of Trump's criticism, especially in recent days amid the start of a publicity tour for Comey's book, which was released Tuesday. Comey has been deeply critical of the president, characterizing him as morally unfit to occupy his office, while Trump has labeled the former FBI director as a liar and leaker, suggesting he be sent to jail.

"President Trump, I don't follow him on Twitter but I get to see his tweets tweeted, I don't know how many, but some tweets this past couple of days that I should be in jail. The president of the United States just said that a private citizen should be jailed. And I think the reaction of most of us was, 'meh, that's another one of those things.' This is not normal. This is not OK," Comey told NPR in an interview broadcast Tuesday morning. "The reason I'm talking in terms of morality is, those are the things that matter most to this country. And there's a great danger we'll be numbed into forgetting that, and then only a fool would be consoled by some policy victory."

While Comey's criticism of the president, both in interviews and in his book, has been withering, so too has the White House's response. Trump administration officials have painted Comey as a disgruntled ex-employee looking to settle scores and an admitted leaker whose Congressional testimony had to be corrected almost immediately. Trump's press secretary Sarah Huckabee Sanders said last week that "one of the president's greatest achievements will go down as firing director James Comey" and Trump himself wrote on Twitter over the weekend that Comey "will go down as the WORST FBI Director in history, by far!"

"This is not some tin pot dictatorship where the leader of the country gets to say 'the people I don't like go to jail.' Our Lady Justice wears a blindfold. And the reason all those statues all over the country have a blindfold is, that's the way it has to be," Comey told NPR. "Lady Justice can't

AMERICAN OVERSIGHT

be peeking under the blindfold to see if Donald Trump wants her to convict so-and-so and not convict so-and-so. If we lose that, we've lost the rule of law, and so there's great danger in the president of the United States saying 'you should be in jail.'"

Asked about the potential that he might one day run for office, Comey was emphatic that he had no such plans. Instead, he said he plans to teach at the university level and give speeches on ethics and leadership.

"Never. I will never run for office. Not even a close call," he said. "I'm going to teach about leadership and ethics, and so I'm going to be a professor, which is exciting, and speak about leadership… I'm going to use my book in the class and I'm going to buy it for the students, because I'm not going to be one of those professors."

EPA News Highlights 4.17.18

Cincinnati Enquirer: EPA Head Scott Pruitt in Cincinnati

U.S. Environmental Protection Agency Administrator Scott Pruitt visited Cincinnati Monday. He spent part of his day Monday, according to a tweet, with Greater Cincinnati Water Works officials and workers regarding the replacement of lead pipes. He also visited the federal EPA's Cincinnati Office of Research and Development near the University of Cincinnati. "This is a model for cities across the country should look at in order to invest in the future of our children," Pruitt tweeted.

Bloomberg Environment: Pruitt Seeks Quicker Superfund Cleanups at Three Targeted Sites

EPA Administrator Scott Pruitt put the spotlight on three more Superfund sites to accelerate cleanup efforts after the agency targeted those sites for a lack of progress. The Environmental Protection Agency named the sites in California, Delaware, and Minnesota April 16 after the agency's regional staff said they needed a push from the administrator, Albert "Kell" Kelly, Pruitt's senior adviser on Superfund issues, told Bloomberg Environment.

Tulsa World: EPA Finalizes Guidelines to Ebb Illinois River, Tenkiller Lake Pollution

After decades of disagreement and litigation, it appears Arkansas and Oklahoma finally will be operating off the same page when it comes to Illinois River and Tenkiller Lake pollution sources. Longtime Illinois River advocates were glad to see the Environmental Protection Agency's announcement Monday of long-awaited pollution guidelines for the watershed. "I'm certainly glad to hear this," said Ed Brocksmith, a founder of the group Save The Illinois River, who said for a Tulsa World article just a few weeks ago that he feared years of cooperative efforts in the hands of the EPA had "fallen into a black hole." "It's definitely a step forward," he said Monday.

Las Vegas Review Journal: Nevada's Anaconda Mine Removed from EPA Superfund List

An agreement reached between Nevada and the Environmental Protection Agency has kept the Anaconda Copper Mine off a Superfund list, with cleanup now being directed by the state and funded by a private company, officials said Monday. Pruitt released a list of potential Superfund sites Monday that no longer includes the Nevada mine. The list also excludes the San Jacinto River Waste Pits in Texas. Three sites in California, Delaware and Minnesota were targeted by the EPA for immediate and intense cleanup efforts and put on a list for Superfund inclusion. "We are making tremendous progress expediting sites through the entire Superfund remediation process," Pruitt said in a statement. Pruitt said the updated list "reflects our commitment to addressing Superfund sites as quickly and safely as possible."

Bloomberg Environment: Smaller Bites in EPA Air Chief's Second Pass at Permitting Updated

William Wehrum has unfinished business with the EPA's air pollution permitting program for factories and power plants that want to expand or make major upgrades to their facilities. "This time around," Wehrum told Bloomberg Environment in an exclusive April 13 interview, "it's important to strike a better balance." Already, the EPA has issued two industry-coveted tweaks to the permitting program through guidance documents.

Former FBI Director James Comey denounced Donald Trump's presidency as a threat to bedrock American values, warning that the president's calls for Comey to be jailed could erode the rule of law. The former FBI director, whom Trump fired last spring, has been a frequent target of Trump's criticism, especially in recent days amid the start of a publicity tour for Comey's book, which was released Tuesday. Comey has been deeply critical of the president, characterizing him as morally unfit to occupy his office, while Trump has labeled the former FBI director as a liar and leaker, suggesting he be sent to jail.

TRUMP TWEETS

Cincinnati Enquirer

https://www.cincinnati.com/story/news/2018/04/16/epa-head-scott-pruitt-cincinnati/521380002/

EPA Head Scott Pruitt in Cincinnati
By Carrie Blackmore Smith, 4/16/18

U.S. Environmental Protection Agency Administrator Scott Pruitt visited Cincinnati Monday.

He spent part of his day Monday, according to a tweet, with Greater Cincinnati Water Works officials and workers regarding the replacement of lead pipes. He also visited the federal EPA's Cincinnati Office of Research and Development near the University of Cincinnati.

"This is a model cities across the country should look at in order to invest in the future of our children," Pruitt tweeted.

Cincinnati, like many older cities, constructed its system with lead pipes at the start of the last century.

Water Works has made it a priority to replace all lead pipes with copper in order to reduce exposure to lead in drinking water. Lead can cause all sorts of health problems, including developmental delays, high blood pressure and heart disease.

"We appreciated the visit today from Administrator Pruitt. The visit gave us a chance to explain our enhanced lead program that includes education, outreach and removal of lead service lines," said water works Director Cathy Bailey. "Our program wasn't mandated by regulations, but implemented because it is the right thing to do for our community, and we believe it can serve as a model across the country."

New research found a correlation between lead and cardiovascular disease, too. It affects children at a higher rate than adults because their brains are still developing.

The response in Twitter was fierce, with some playing off his use of #gettheleadout.

Bloomberg Environment

Pruitt Seeks Quicker Superfund Cleanups at Three Targeted Sites
By Sylvia Carignan and Stephen Joyce, 4/16/18

EPA Administrator Scott Pruitt put the spotlight on three more Superfund sites to accelerate cleanup efforts after the agency targeted those sites for a lack of progress.

AMERICAN OVERSIGHT

The Environmental Protection Agency named the sites in California, Delaware, and Minnesota April 16 after the agency's regional staff said they needed a push from the administrator, Albert "Kell" Kelly, Pruitt's senior adviser on Superfund issues, told Bloomberg Environment.

Kelly expects that push to come in the form of an expedited cleanup plan decision or quicker negotiations for each of the sites.

Pruitt also removed two sites from the list of those needing immediate action.

The sites EPA added to the list are Delaware Sand and Gravel Landfill in New Castle, Del., Casmalia Resources in Casmalia, Calif., and St. Regis Paper Co. in Cass Lake, Minn.

Kelly said hard and fast criteria aren't necessarily used when adding sites to the administrator's list.

"The criteria has some subjectivity to it, because it has to be sites [where] regions believe attention from the administrator will help them get to whatever milestone," Kelly said.

Cass Lake, Minn.

Pruitt aims to finalize a residential soil cleanup plan for the St. Regis Paper Co. site.

Remediating the Minnesota site "has been a very long and difficult process," Sara Peterson, a lawyer representing Cass Lake, Minn., the city where the property is located, told Bloomberg Environment.

The site contains soils and groundwater possibly contaminated by dioxins, pentachlorophenol, and polycyclic aromatic hydrocarbons, according to an EPA fact sheet on the site.

From the 1950s to the 1980s, Champion Paper Co.—a predecessor company to the site's current owner, Memphis, Tenn.-based International Paper Co.—manufactured treated wood for railroad ties and telephone poles.

Thomas Ryan, a spokesperson for International Paper, told Bloomberg Environment the company is working with the EPA and other parties at the Superfund site.

The city is anxious for the site's environmental cleanup to be completed, Peterson said.

"They need the jobs that would come with the redevelopment of this site, and they've got some potential opportunities out there. But having a Superfund site there at this point makes it awfully hard to market the site," she said.

A March 2016 EPA-proposed plan recommended removing contaminated soil from affected residential areas and replacing it with clean soil, managing removed soil on site, disposing of a small amount of heavily contaminated soil at an off-site facility, and monitoring soil stored on site.

Casmalia, Calif.

The Casmalia Resources site in California was a commercial hazardous waste treatment, storage, and disposal facility spanning more than 250 acres.

The EPA finalized a $590,722 settlement in November with 57 of the companies that contributed waste to the landfill. Those companies include Nestle, Leidos Inc., Hubbell Inc., and Hearst Corp.

None of those companies responded to Bloomberg Environment's emails or calls about the site's addition to Pruitt's list.

In addition, companies and government agencies involved with the Delaware site did not respond to Bloomberg

AMERICAN OVERSIGHT

Environment's requests for comment.

Setting Deadlines

The EPA also provided updates April 16 about each of the other sites on Pruitt's "immediate, intense action" list.

At the Mohawk Tannery site in Nashua, N.H., the agency wants to propose a cleanup plan this summer. The EPA is negotiating an agreement with a prospective purchaser who would redevelop the site.

For two New Jersey sites, American Cyanamid Inc. in Bound Brook and Berry's Creek in Wood Ridge borough, the agency wants to propose cleanup plans by the end of this spring.

The agency also wants to propose a cleanup plan for the Superfund site in East Chicago, Ind. his summer. The EPA is working on cleaning up lead-contaminated soil at parts of the site.

Delisted Sites

Pruitt already has made major cleanup decisions at the two sites removed from the list, the Anaconda Copper Mine in Yerington, Nev., and San Jacinto River Waste Pits outside Houston.

The EPA agreed in February to allow Nevada to oversee the cleanup of the Anaconda site, owned by Atlantic Richfield Co., after the state sought to assume control and work with private parties for a quicker resolution.

The former mine site had been under consideration to be added to the EPA National Priorities List so it could qualify for long-term cleanup and federal funding. The state last year asked the agency to defer the mine listing except for areas on tribal lands.

The San Jacinto River Waste Pits site contains paper mill waste material, including highly toxic dioxins, generated in the bleaching of wood pulp to make paper, the EPA said.

Pruitt announced a $115 million plan in October for the pits that entails excavating more than 212,000 cubic yards of contaminated waste.

Superfund sites are the most contaminated in the country, and include the Gowanus Canal in New York, Portland Harbor in Oregon, and Tar Creek in Oklahoma. Properties with EPA's Superfund designation are eligible to receive federal funds for cleanup, though the agency aims to compel companies responsible for the sites to pay the cleanup bills.

Tulsa World

http://www.tulsaworld.com/homepagelatest/epa-finalizes-guidelines-to-ebb-illinois-river-tenkiller-lake-pollution/article_f2de85c0-46c8-5dec-99c4-3a84fc710fad.html

EPA Finalizes Guidelines to Ebb Illinois River, Tenkiller Lake Pollution

By Kelly Bostian, 4/16/18

Long-awaited rules mean Arkansas and Oklahoma agencies will operate off same page

After decades of disagreement and litigation, it appears Arkansas and Oklahoma finally will be operating off the same page when it comes to Illinois River and Tenkiller Lake pollution sources.

Longtime Illinois River advocates were glad to see the Environmental Protection Agency's announcement Monday of long-awaited pollution guidelines for the watershed.

"I'm certainly glad to hear this," said Ed Brocksmith, a founder of the group Save The Illinois River, who said for a Tulsa

AMERICAN OVERSIGHT

World article just a few weeks ago that he feared years of cooperative efforts in the hands of the EPA had "fallen into a black hole."

"It's definitely a step forward," he said Monday.

Phosphorous and nitrates from wastewater plants, poultry producers, industry and other sources caused algae to grow in the river and changed the habitat. The pollutants can cause algal blooms that lead to low dissolved oxygen and fish die-offs in the lake. Increased erosion and sedimentation in the river and lake also are issues.

What the EPA approved are working models for the river and the lake that address the long-debated water quality factors, most notably "total maximum daily load" for phosphorus and nitrates. In coming weeks and months, Oklahoma and Arkansas agencies and stakeholders will review the models and discuss implementation and enforcement of those rules.

The Oklahoma Water Resources Board planned to discuss the guidelines in its meeting in Oklahoma City Tuesday morning. Oklahoma Secretary of Energy and Environment Michael Teague met with his cabinet and other state agency leaders Monday.

"What we have now is a template that is concise and clear and user-friendly," said Ed Fite, vice president of water quality for Grand River Dam Authority. "The homework assignment now is for the two states to put together a framework of how it all comes together."

Teague said his office, Arkansas state leaders, agency leaders of both states and Cherokee tribal leaders have worked with the EPA throughout the process.

"The models (for the river and Tenkiller Lake) say, 'here is the tool we're all going to use,' " Teague said. "Now we can look at it and say, 'now if we put this regulation change in place here, then what does that impact throughout the system?' It gives everyone a common platform."

EPA Regional Administrator Anne Edsal urged that continued cooperation.

"Over the years, we have made great progress by working with states, tribes and local agencies in improving conditions throughout the watershed and we look forward to continuing this effort," she said.

After years of disagreement between the states, a Statement of Joint Principles and Action was signed in 2003 in an effort to avoid litigation and further scientific understanding of the situation at hand.

The agreement fell short in the eyes of Oklahomans, who filed suit against poultry producers in a lawsuit that concluded in 2008 but has yet to see a ruling from the presiding judge.

Cooperative efforts increased after the lawsuit and in 2013 the states extended the agreement, enlisted the help of Baylor University as a neutral third party to complete water quality studies, and in 2016 the reports and suggested models were given to the EPA for finalization.

"Now the states and other entities can begin finding agreement on how to achieve Oklahoma Scenic River water quality standards," said Denise Deason-Toyne, president of non-profit Save the Illinois River group. "We are anxious to see the modeling for phosphorous, the primary nutrient that is over fertilizing our scenic rivers and Tenkiller Lake. Sedimentation is also a big problem, which must be addressed."

The Oklahoma-Arkansas Scenic Rivers Joint Phosphorus Study, part of the cooperative effort started in 2003, found that a 0.037 ppm total maximum daily load was appropriate for the river with the help of Baylor University researchers. The guideline is one that Arkansas interests initially thought to be arbitrary and too restrictive.

AMERICAN OVERSIGHT

EXT-18-783-F-002896

ED_001863D_00000181-00005

Teague said his understanding is the new models follow that 0.037 recommendation but he said the states will have to make it official.

Fite said that from his discussions with Arkansas leaders and stakeholders, the guidelines will be welcomed.

“People have been just waiting for the ambiguity to be firmed up and have a number so they can actually plan, design and fund and implement (their plans),” he said.

Teague said collaboration between states, agencies and stakeholders has been a superior process to legal wrangling of the past.

“Collaboration is how you get everything done,” he said. “It’s how we addressed earthquakes, it’s this same type of thing, and now we have Arkansas and Oklahoma and EPA Region 6 and the Cherokee Nation all working together and improving this watershed.”

Las Vegas Review Journal

Nevada’s Anaconda Mine Removed From EPA Superfund List

By Gary martin, 4/16/18

An agreement reached between Nevada and the Environmental Protection Agency has kept the Anaconda Copper Mine off a Superfund list, with cleanup now being directed by the state and funded by a private company, officials said Monday.

Nevada Gov. Brian Sandoval and EPA Administrator Scott Pruitt signed a National Priorities List Deferral Agreement on Feb. 5 that puts the state in control of expedited cleanup and preparation for reuse of the property.

“Since Governor Sandoval took office and before, the state has worked to develop a long-term plan to clean up the site with a secure source of funding,” said Mary-Sarah Kinner, the governor’s spokeswoman.

Pruitt released a list of potential Superfund sites Monday that no longer includes the Nevada mine.

The list also excludes the San Jacinto River Waste Pits in Texas. Three sites in California, Delaware and Minnesota were targeted by the EPA for immediate and intense cleanup efforts and put on a list for Superfund inclusion.

“We are making tremendous progress expediting sites through the entire Superfund remediation process,” Pruitt said in a statement.

Pruitt said the updated list “reflects our commitment to addressing Superfund sites as quickly and safely as possible.”

The EPA administrator visited the Nevada and Texas sites as part of his effort to make timely decisions for cleanup of the sites and ensure protection of health and the environment for the surrounding communities.

During the Obama administration, the EPA proposed adding the Anaconda Copper Mine, which opened in 1918, to the Superfund National Priorities List to make it eligible for federal remedial funds.

Last year Atlantic Richfield Co. approached Nevada and proposed to fund implementation of a sitewide remedy for the mine. The company bought the mine in 1978.

Sandoval asked EPA in July to defer placing the copper mine on the Superfund list. Sandoval, the Nevada Division of Environmental Protection, Native American tribes and other stakeholders worked with the EPA to keep the site off the

AMERICAN OVERSIGHT

national priorities list.

Pruitt granted the request after the EPA determined cleanup efforts meet federal requirements.

In February, Sandoval called the signing of the agreement with the EPA a "landmark day." He said the state and Atlantic Richfield would work in partnership on the remaining cleanup, which is expected to take another decade.

The Trump administration has proposed cutting spending at the EPA, and funds for the Superfund program.

With cleanup under administration by the state, and Atlantic Richfield pledging to fund the process, state officials see the decision on a deferred listing as a move to secure funding for cleanup of leaching fields at the old mine where chemicals were used to strip copper from rock.

As a result of this public-private partnership, there was no need for the EPA administrator's office to continue tracking the mine site, Kinner said. The site will remain proposed for the national priority list until cleanup is completed under Nevada Division of Environmental Protection oversight.

Cleanup actions under the Superfund program have historically been slow, expensive and process-laden, according to the state agency.

The mine is located in Lyon County near the town of Yerington.

Bloomberg Environment

https://news.bloombergenvironment.com/environment-and-energy/smaller-bites-in-epa-air-chiefs-second-pass-at-permitting-update

Smaller Bites in EPA Air Chiefs Second Pass at Permitting Update

By Jennifer Lu, 4/16/18

William Wehrum has unfinished business with the EPA's air pollution permitting program for factories and power plants that want to expand or make major upgrades to their facilities.

In his first stint at the Environmental Protection Agency in an acting capacity, Wehrum tried to address industry criticism over the permitting program, known as new source review, with sweeping rulemaking bundles.

His efforts were either dropped after the George W. Bush administration withdrew his nomination to head the Office of Air and Radiation in 2007, blocked by the courts, or undone by the incoming Obama administration.

"This time around," Wehrum told Bloomberg Environment in an exclusive April 13 interview, "it's important to strike a better balance."

Already, the EPA has issued two industry-coveted tweaks to the permitting program through guidance documents.

The new source review program requires factories and power plants to install costly new air pollution controls when they expand or make modifications that increase their emissions.

Industries have long complained that securing compliance with the permitting program is tedious, time consuming, and confusing. Updating how the EPA administers the program through guidance documents is one way to quickly address those concerns.

"There are a lot of current issues within [new source review] that we can provide clear guidance through guidance," Wehrum said. "Our strategy is to tell people sooner rather than later how we think the program should be implemented."

AMERICAN OVERSIGHT

EXT-18-783-F-002898

ED_001863D_00000181-00007

Did You Get the Memo?

The focus on bite-sized updates to EPA programs comes after Wehrum watched a series of ambitious regulations he helped craft—from toxic air pollution rules from the power industry to attempts to set up an emissions trading program for power plants—get overturned by judges during his last go-round at the agency between 2005-2007.

Back then, Wehrum didn't have the option to quickly update policy through guidance. Only since a 2014 U.S. Supreme Court decision in Perez v. Mortgage Bankers Association have federal agencies like the EPA been allowed to issue guidance such as policy memos without having to go through a lengthy public comment process.

"We have an interest in trying to do some things quickly, and especially in case-specific circumstances where clarity is lacking," Wehrum said.

However, policy made through guidance memos can be just as easily undone by a new administration, John Walke of the Natural Resources Defense Council, who previously served in the EPA General Counsel's Office, told Bloomberg Environment.

Environmental groups like Walke's and some states have already sued the EPA over one of its guidance documents, which eased toxic pollution emissions standards for industry.

"Industry relies upon Bill Wehrum's guidance at its peril," Walke said.

Everything Old is New Source Review Again

But updating the permitting program has long been an industry priority. It was repeatedly spotlighted by businesses when the EPA put out a call for regulations that should be revised or eliminated.

After past regulatory efforts to make it industry-friendly fizzled, the fastest way to address business concerns is through guidance, Richard Alonso, environmental attorney at Sidley Austin LLP's Washington, D.C., office, told Bloomberg Environment.

Already, the EPA has issued two memos on two new source review changes. A December memo told agency staff not to "second-guess" how facilities calculate emissions changes.

That was followed by a March memo on project emissions accounting, also known as project netting, which tells facilities how to calculate whether emissions from their proposed new construction projects would increase pollution. Under the new guidance, facilities can include emissions decreases from their projects to the overall calculations to avoid triggering new source review.

The memo drew inspiration from a 2006 rule changing three aspects of emissions counting under new source review, which lost traction after Wehrum left the agency.

"Finalizing this [2006] rulemaking would help to remove a substantial burden to energy and manufacturing projects," Louis Renjel, vice president of federal government affairs and strategic policy at Duke Energy, wrote in response to an EPA call for suggestions on reducing regulatory burdens.

The American Chemistry Council also asked the EPA to revisit the reforms proposed during the Bush-era EPA, whether through guidance, regulation, or legislation.

The EPA this summer aims to address project aggregation, another piece of new source review reform from Wehrum's 2006 rulemaking bundle.

It would define how emissions from separate modifications that take place around the same time should be counted,

AMERICAN OVERSIGHT

EXT-18-783-F-002899

ED_001863D_00000181-00008

according to a presentation Anna Marie Wood, director of the EPA's Air Quality Policy Division, gave at a state air regulators conference April 5.

More Guidance Coming

Three more guidance memos are slated to be issued this spring, according to Wood's presentation.

One would redefine what counts as "ambient air," or the air the general public breathes. This definition is important to new source review because facilities must show that their post-construction emissions won't worsen air quality according to the national standards, Lynn Hutchinson, the EPA new source review project lead in 2002, told Bloomberg Environment.

Another guidance document in the works would change the pollutant modeling used to decide whether emissions would damage air quality. The White House completed its review of the memo April 12.

A third spring guidance document would allow the EPA to revive an attempt to expand the kinds of routine maintenance and repairs excluded from new source review. That 2003 rule was vacated by the U.S. Court of Appeals for the District of Columbia Circuit in New York v. EPA in 2006, which said industries could not write off physical changes that cost below a certain amount as routine maintenance.

"You already have a court on record saying those particular reforms are not allowed, so those might be a heavier lift without notice and comment rulemaking," Alonso said.

When asked how he will ensure that his current batch of reforms stick beyond the current administration, Wehrum said, "a piece of it is making change that will last, but the bigger piece of it, for me, again, is just from a public policy standpoint."

"If people can't look at our rules and know what they need to do to comply, then we've got a problem," he said.

Reuters

https://www.reuters.com/article/us-usa-trump-russia-cohen/foxs-hannity-revealed-as-mystery-client-of-trumps-personal-lawyer-idUSKBN1HN12G

Fox's Hannity Revealed as Mystery Client of Trump's Personal Lawyer

By Brendan Pierson, Karen Freifeld, Jonathan Stempel, 4/16/18

U.S. President Donald Trump's personal lawyer was forced on Monday to reveal in a New York federal court that Fox News personality Sean Hannity, one of Trump's most ardent defenders, was also on his client list.

Michael Cohen, Trump's fiercely loyal and pugnacious lawyer, disclosed Hannity's name through one of his own lawyers at the order of the judge. Stormy Daniels, an adult-film actress who says she had a sexual encounter with Trump, watched from the public gallery.

Daniels, in a separate civil case, is fighting a 2016 non-disclosure agreement arranged by Cohen in which she got $130,000 to stop her from discussing her claim she had sex with Trump a decade earlier, something Trump has denied.

Hannity, 56, said on Monday that he had never paid for Cohen's services or been represented by him, but had sought confidential legal advice from him. The conservative host often uses his weeknight broadcast on Fox News to defend the president against what he sees as biased attacks by the media. Sometimes Trump praises Hannity in return.

Cohen was in court to ask the judge to limit the ability of federal prosecutors to review documents seized from his offices and home last week as part of a criminal investigation, which stems in part from a probe into possible collusion between Trump's presidential campaign and Russia. (Full Story)

AMERICAN OVERSIGHT

The Russia investigation has frustrated the White House as it has spread to enfold some of Trump's closest confidantes.

Judge Kimba Wood spent more than 2-1/2 hours listening to arguments by Cohen's lawyers, prosecutors from the U.S. attorney's office in Manhattan and a lawyer representing Trump in the hearing. She is expected to rule later.

She ordered prosecutors to give Cohen's lawyers a copy of the seized materials before the next hearing.

The unexpected naming of Hannity made him the latest prominent media personality to be drawn into the investigation's cast of unlikely supporting characters.

Daniels, whose real name is Stephanie Clifford, was another. As she arrived at the courthouse dressed in a lavender suit, photographers knocked over barricades as they scrambled to get pictures.

Daniels sat with her lawyer, Michael Avenatti, who told reporters they were there to help ensure protection for the integrity of the seized documents, some of which they believe pertain to the Daniels agreement.

Cohen, dressed in a dark suit, at times looked tense, folding and clasping his hands in front of him.

GASPS AND LAUGHTER

Cohen has argued that some of the documents and data seized from him under a warrant are protected by attorney-client privilege or otherwise unconnected to the investigation. But Judge Wood said she would still need the names of those other clients, and rejected his efforts to mask the identity of Hannity, a client Cohen had said wanted to avoid publicity.

"I understand if he doesn't want his name out there, but that's not enough under the law," Wood said, before ordering the name disclosed.

Stephen Ryan, a lawyer for Cohen, drew gasps and laughter from the public gallery when he named Hannity as the client.

After his identity was revealed, Hannity said on his syndicated radio show, and again later on his Fox News program, that he had "occasional, brief discussions" with Cohen in which he sought out Cohen's "input and perspective."

Hannity said he assumed those discussions were covered by attorney-client privilege, and insisted that none involved any matter between himself and a third party. He also said his talks with Cohen "almost exclusively focused on real estate."'

Legal advice can be considered privileged even if given by a lawyer for free.

Hannity, the top-rated personality on the most watched U.S. cable news network, told his viewers on April 9 that the raid on Cohen was part an effort by federal investigators to wrongly impeach the president. He never mentioned his association with Cohen during that broadcast.

On Monday's show, Hannity expressed amusement at the firestorm of media coverage unleashed by the disclosure that he and Trump shared a legal adviser in Cohen, playing a 45-second, rapid-fire montage of various TV commentators and anchors uttering his name on the air throughout the day.

Cohen has asked the court to give his own lawyers the first look at the seized materials so they can identify documents that are protected by attorney-client privilege. (Full Story)

Failing that, they want the court to appoint an independent official known as a special master, a role typically filled by a lawyer, to go through the records and decide what prosecutors can see.

AMERICAN OVERSIGHT

But prosecutors want the documents to be reviewed for attorney-client privilege by a "taint team" of lawyers within their own office, who would be walled off from the main prosecution team.

"I have faith in the Southern District U.S. Attorney's Office that their integrity is unimpeachable," making a taint team "a viable option," Judge Wood said.

But she also said that to help ensure fairness and the perception of fairness, "a special master might have some role here."

After the hearing, Cohen left without comment.

Daniels, in contrast, stepped up to the bank of microphones set up on the sidewalk, telling reporters that Cohen had thought he was above the law.

"My attorney and I are committed that everyone finds out the truth and the facts of what happened, and I will not rest until that happens," she said.

Washington Free Beacon

http://freebeacon.com/national-security/ex-cia-chief-says-obama-rejected-cyber-action-russia-election-meddling/

Ex-CIA Chief Says Obama Rejected Cyber Action Against Russia for Election Meddling

By Bill Gertz, 4/17/18

Despite an unprecedented Russian intelligence operation to influence the 2016 presidential election, former President Barack Obama rejected a plan to conduct retaliatory cyber action against Moscow during the campaign, according to former CIA Director John Brennan.

Brennan disclosed Saturday that Obama opposed a plan to carry out "a cyber event" against the Russians because the former president feared the action would lead to more aggressive interference by Moscow.

"There was consideration about rattling their cages with some type of cyber event," Brennan said during remarks to a journalism conference at the University of California Berkeley.

But based on Obama's fears, the planned cyber action was shelved in favor issuing vague warnings to Russian officials. Brennan did not elaborate on the cyber retaliation plan.

"President Obama was the ultimate decision-maker on that," Brennan said of the lack of response.

The former CIA director defended the Obama administration's handling of what is widely viewed as a significant counterintelligence failure during the presidential election.

After the election, Obama ordered the expulsion of 35 Russian intelligence officers.

Both the FBI and CIA are charged with the conducting counterintelligence–detecting and thwarting hostile intelligence operations. Both agencies failed to halt the Russians in 2016 either in the United States or abroad.

U.S. officials have said the targeting of U.S. and foreign elections by Russia is continuing.

President Trump in February criticized his predecessor in a Tweet for failing to act. "Why didn't Obama do something about the meddling? Why aren't Dem crimes under investigation? Ask Jeff Sessions!" he tweeted.

The disclosure that Obama scrapped a cyber plan to retaliate against Moscow for election interference comes as a former senior counterintelligence official, Michelle Van Cleave, revealed in congressional testimony last week that the Obama administration weakened American counterintelligence programs by downgrading a top counterspy office.

AMERICAN OVERSIGHT

Brennan said he had "great confidence" the Russian influence operation was authorized and directed by Russian President Vladimir Putin, a former KGB intelligence officer. The Russian intelligence services also "know what the mission is, know what their capabilities are, and will apply them to issues that are of interest to Russian national security," he said.

Brennan called the meddling "unprecedented in terms of its scope and intensity, and made full use of the digital domain."

The first indications of Russian interference were spotted in late 2015 and early 2016 and the operation was mentioned in press reports in the spring of 2016. By the summer of 2016 the operations were confirmed, he said.

Obama also made clear to the CIA that he did not want the agency doing anything "in reality or in perception" that would have advanced the Russian disinformation and propaganda campaign, Brennan said.

"We were really trying to strike the right balance between doing everything we could to prevent and thwart as well as to uncover and understand what the Russians were doing without doing anything that would almost advance their interests in trying to disrupt our election," he said.

Obama also was afraid any U.S. action against the Russians might be perceived as an outgoing Democratic president working to influence the election outcome.

"So if we did more things and stood at the hilltops and cried out, 'the Russians, the Russians are trying to help Trump get elected,' and if President Obama who is the titular head of the Democratic Party were to do that, I think that there would have been a lot of people would believe, I think with some justification, that the President of the United States was trying to influence the outcome of a presidential election," Brennan said.

Brennan also said the Obama administration opposed aggressive action because of the president's belief that any effort to punish the Russian might produce stepped up activities.

Russian hackers had been detected navigating inside state election voter registration roll computers and other election-related networks.

"They had things that they could have done that they didn't do," Brennan said of the Russians.

Intelligence agencies concluded in a report issued in early 2017 that Russian civilian and military intelligence agencies conducted an aggressive operation to sow social discord during the 2016 election by opposing Hillary Clinton while seeking to boost Donald Trump's campaign.

The Russian operation included the use of advertising on social media platforms like Facebook, and cyber attacks involving the cyber theft of emails and postings online using covert internet personas.

In February, 13 Russians were indicted by Special Counsel Robert Mueller for running a St. Petersburg, Russia-based internet troll farm that carried out influence operations during the elections.

So far, no action has been taken against the Russian hackers engaged in email thefts.

Kenneth deGraffenreid, former deputy national counterintelligence executive, said Obama's inaction was a major counterintelligence failure.

"If Brennan's claims are true, the Obama administration's inaction in the face of this Russian cyber aggression represents a serious counterintelligence failure that has had terrible consequences," deGraffenreid said.

"Good counterintelligence requires an active element beyond collecting and analyzing the secret information that has

AMERICAN OVERSIGHT

been uncovered–namely countering this serious foreign intelligence threat in an effective way. The U.S. has the sophisticated tools to do this."

"There simply is no excuse for not doing so," he added. "Our national security depends on American leaders taking the action required."

Despite signs the operation had been underway since 2015, Brennan said he was the first U.S. official to protest the matter during an Aug. 4, 2016, telephone to Alexander Bortnikov, head of Russia's FSB security service.

"I told him rather directly that if the Russians were to go down this road, they would pay a significant price," Brennan said. "I told him that all Americans would be outraged by a Russian effort to try and interfere in our election."

A month later at the G-20 summit in China, Obama confronted Putin about the election interference, according to Brennan.

Weeks later, Director of National Intelligence James Clapper and Homeland Security Secretary Jeh Johnson issued an official statement accusing the Russian government of interfering with the election campaign.

Brennan said he believes the softline Obama policy dissuaded Moscow from intensifying the campaign and that he had no regrets.

Additionally, the former CIA chief said he has spoken to Obama who he asserted is "very comfortable with what we did and didn't do."

"I would argue that I think by pushing them back a bit and confronting them with it, both privately as well as publicly, I think we did dissuade them from even going further," he said.

Brennan also said the CIA was told by Obama not to take any action on the Russian intelligence operation over concerns any action would appear the administration was trying to support the Democratic candidate, Hillary Clinton.

Since leaving office, Brennan has been a Trump critic, taking to Twitter to call the president a "charlatan," "demagogue," and "snake oil salesman."

Brennan said that criticism has cost him financially as "a number of opportunities were rescinded."

Russian cyber intelligence operations are sophisticated and difficult to track, he said.

"And so I fully anticipate that the Russians and others are going to take advantages that are there," Brennan said. "They are going to try to hide their footprints better. They're going to try to prevent the U.S. from understanding what may be happening there. But let's not make a mistake, that environment is ripe for mal actors and they are going to continue to cause us problems."

On the controversial dossier produced by former British intelligence officer Christopher Steele, Brennan said the dossier may have been part of a Russian cover operation.

"Well certainly it could be," he said. "I don't know the provenance of the information. As I said I've seen the dossier. It is done by a former accomplished member of the British intelligence service, MI-6. It is sourced to unnamed sources and subsources that alleged these types of activities. So I don't know whether the information in it–some, all or none–is valid or not."

Brennan said he does not believe Steele was manipulated by the Russians for intelligence purposes.

"I do not believe he is acting on behalf of them," he said. "Might he have been unwittingly used? Maybe. So I don't

AMERICAN OVERSIGHT

know."

The Steele dossier was funded by the Democratic National Committee and the Clinton campaign through the research group Fusion GPS.

The Washington Free Beacon hired Fusion GPS to conduct research on Republican candidates but had no role in the dossier.

On his political views, Brennan said he is not a member of any political party and described himself as "an avowed nonpartisan."

In 2016, Brennan disclosed that in 1976 he voted for the Moscow-backed Communist Party USA candidate for president, Gus Hall, during the height of the Cold War.

Comey on Trump Calling for Him to Be Jailed: 'This Is Not OK'

By Louis Nelson, 4/17/18

Former FBI Director James Comey denounced Donald Trump's presidency as a threat to bedrock American values, warning that the president's calls for Comey to be jailed could erode the rule of law.

The former FBI director, whom Trump fired last spring, has been a frequent target of Trump's criticism, especially in recent days amid the start of a publicity tour for Comey's book, which was released Tuesday. Comey has been deeply critical of the president, characterizing him as morally unfit to occupy his office, while Trump has labeled the former FBI director as a liar and leaker, suggesting he be sent to jail.

"President Trump, I don't follow him on Twitter but I get to see his tweets tweeted, I don't know how many, but some tweets this past couple of days that I should be in jail. The president of the United States just said that a private citizen should be jailed. And I think the reaction of most of us was, 'meh, that's another one of those things.' This is not normal. This is not OK," Comey told NPR in an interview broadcast Tuesday morning. "The reason I'm talking in terms of morality is, those are the things that matter most to this country. And there's a great danger we'll be numbed into forgetting that, and then only a fool would be consoled by some policy victory."

While Comey's criticism of the president, both in interviews and in his book, has been withering, so too has the White House's response. Trump administration officials have painted Comey as a disgruntled ex-employee looking to settle scores and an admitted leaker whose Congressional testimony had to be corrected almost immediately. Trump's press secretary Sarah Huckabee Sanders said last week that "one of the president's greatest achievements will go down as firing director James Comey" and Trump himself wrote on Twitter over the weekend that Comey "will go down as the WORST FBI Director in history, by far!"

"This is not some tin pot dictatorship where the leader of the country gets to say 'the people I don't like go to jail.' Our Lady Justice wears a blindfold. And the reason all those statues all over the country have a blindfold is, that's the way it has to be," Comey told NPR. "Lady Justice can't be peeking under the blindfold to see if Donald Trump wants her to convict so-and-so and not convict so-and-so. If we lose that, we've lost the rule of law, and so there's great danger in the president of the United States saying 'you should be in jail.'"

Asked about the potential that he might one day run for office, Comey was emphatic that he had no such plans. Instead, he said he plans to teach at the university level and give speeches on ethics and leadership.

"Never. I will never run for office. Not even a close call," he said. "I'm going to teach about leadership and ethics, and so I'm going to be a professor, which is exciting, and speak about leadership... I'm going to use my book in the class and I'm

AMERICAN OVERSIGHT

going to buy it for the students, because I'm not going to be one of those professors."

TRUMP TWEETS

Looks like Jerry Brown and California are not looking for safety and security along their very porous Border. He cannot come to terms for the National Guard to patrol and protect the Border. The high crime rate will only get higher. Much wanted Wall in San Diego already started!

AMERICAN OVERSIGHT

Keep Scott Pruitt and keep EPA reform alive

:s EPA has engaged in bureaucratic overreach far exceeding its lawful authority;

; been used by partisan interests, radical pressure groups and profiteers to thwart business and ɔurden private property rights often with questionable if any benefit to the environment;

; operated in an opaque manner, refusing to share the data and science it relies upon for review avoided realistic cost-benefit analyses of its policies;

; used "sue and settle" legal tactics to short-circuit the regulatory process and divert financial :s to select special interests;

ıt Trump charged EPA Administrator Scott Pruitt with the task of reforming EPA;

ıstrator Pruitt has become the target of partisan attacks aimed at thwarting his efforts at reform;

re, we the undersigned, call upon President Trump to retain Scott Pruitt as EPA Administrator, ontinue the badly needed process of reforming EPA and restoring it to its proper role as a :tive, non-partisan protector of our environment.

AMERICAN OVERSIGHT

To: Bennett, Tate[Bennett.Tate@epa.gov]
From: POLITICO Pro Energy
Sent: Fri 6/29/2018 9:44:16 AM
Subject: Morning Energy, presented by ExxonMobil: What comes next for FERC? — Perry's New York state of mind — Pruitt meets California official on cars

By Kelsey Tamborrino | 06/29/2018 05:41 AM EDT

With help from Anthony Adragna

PLOT TWIST: FERC Commissioner Rob Powelson shocked the energy world Thursday night when he announced he will leave the agency to lead a trade association for water utilities. Powelson, a Republican appointed by President Donald Trump, was one of the agency's fiercest critics of the administration's efforts to bail out struggling coal and nuclear power plants, but he told Pro's Darius Dixon that policy disagreements had nothing to do with his decision. He said he simply couldn't pass up the once-in-a-lifetime opportunity to take a great job as CEO of the National Association of Water Companies that would allow him to nix the commute to Washington from his home near Philadelphia.

There is no "subplot to this," Powelson said, adding it was a decision he made with his family. "I'm at peace. I know people want to be like, 'Argh, he got forced out! He pissed off the president or Rick Perry.' I'm free to speak my mind now more than ever. And as a Philly boy, I will let it fly," he said. "No one came at me and said, 'You need to move on. You know if that would ever happen, I would never do it anyway. ... If I was done wrong, I'd tell you about it. But life is better than I deserve it to be."

His departure will leave FERC deadlocked, and likely unable to approve new interstate natural gas pipelines over Democratic objections related to issues like climate change. Powelson was a critic against the administration's coal and nuclear bailout pitch, telling a Senate committee earlier this month that a bailout "goes against everything we talk about in terms of supply-and-demand side economics."

Now Trump has a chance to nominate a new commissioner who is friendlier to his pro-coal policies. Still, that person will require Senate confirmation with a tough calendar ahead. Keep in mind, the Senate is racing toward midterm elections, August recess and now a new Supreme Court confirmation — making a speedy confirmation for a FERC nominee all the more unlikely. Read more.

NEW YORK STATE OF MIND: Energy Secretary Rick Perry offered some harsh words Thursday for the state of New York energy, suggesting the federal government should consider preventing the state from blocking new natural gas pipelines. "I think we need to have a conversation as a country, is that a national security issue that outweighs political concerns in Albany, New York?" Perry said, referring to the administration's central national security argument behind efforts to bail out economically struggling coal and nuclear power plants.

Perry has criticized New York Gov. Andrew Cuomo for years, but didn't mention him by name in his remarks at the World Gas Conference. Perry said political opposition to new gas

AMERICAN OVERSIGHT

infrastructure had left the state vulnerable, including to major winter storms and cyberattacks. "And people literally have to start making the decision about 'Do I keep my family warm? Do I keep the lights on?' Does the financial center of New York go dark? Do the hospitals shut down?" he said. Read more from Pro's Matt Daily.

FINALLY FRIDAY! I'm your host, Kelsey Tamborrino. PECO's Tom Bonner correctly identified the three current governors born in Pennsylvania: John Kasich, John Hickenlooper and Tom Wolf. A geography question to close out the week: What state has a triple divide that allows water to flow to the Pacific Ocean, Atlantic Ocean or the Hudson Bay? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

PRUITT MEETS CALIFORNIA OFFICIAL ON CARS: EPA Administrator Scott Pruitt will meet with California's top air regulator this morning in San Francisco, the agency said. Pruitt and Mary Nichols, the head of the California Air Resources Board, will discuss various issues including "cooperative federalism, car and truck greenhouse gas standards, and NAAQS," according to EPA. The Trump administration is weighing action on car emissions standards that could spark a court showdown with California, as it currently has authority to set its own greenhouse gas limits on tailpipe emissions. The last time EPA met with CARB officials, the agency called it a "productive" meeting, although Nichols took to Twitter shortly after to dispute that characterization.

** **Presented by ExxonMobil:** Natural gas has become more important than ever. That's because it's fueling an American manufacturing revival and creating jobs while lowering emissions. And ExxonMobil is one of the world's largest providers. EnergyFactor.com **

ZINKE TAKES HIS TURN: Kicking off the final day of the weeklong World Gas Conference, Interior Secretary Ryan Zinke will deliver opening remarks at a panel on innovation in the energy industry that's set to answer questions like, "How can innovative technologies, business models and operating practices shape the future of the global natural gas industry?"

Later in the day, EPA's air chief, Bill Wehrum, will join a workshop on the "role of voluntary action in methane management" — an interesting discussion as greens have pointed fingers at the agency after a report released last week found oil and gas methane emissions are greater than previously thought. Former Energy Secretary Ernest Moniz will close out the conference with remarks about "energy systems of the future."

FOR YOUR RADAR: Zinke met with a "good mix" of electricity, oil and gas leaders Thursday afternoon for a roundtable discussion, an industry source who attended the meeting told ME. About 40 or more people attended the meeting with Zinke, the source added, which ranged from discussions on streamlining the permitting process to federal lands. The meeting follows a similar one in May between Zinke and several conservation groups.

INTERESTING TEAM: Reps. Kyrsten Sinema, a Democrat running for Senate in Arizona, and Steve Stivers, the chairman of the National Republican Congressional Committee, released legislation Thursday that would require political appointees to personally pay back any illegal

AMERICAN OVERSIGHT

expenditures of public funds. No one is singled out, but Pruitt's $43,000 privacy booth would certainly fit the bill. To qualify for repayment under the bill, the spending must be found illegal through a joint determination from an inspector general and the Government Accountability Office. Reps. Brian Fitzpatrick, Josh Gottheimer, Carlos Curbelo and David Young co-sponsored the legislation.

TIMING UPDATE: A House Oversight Committee aide tells ME that staff expect to speak with Kevin Chmielewski, the former Trump EPA political staffer-turned-whistleblower, "within the next couple of weeks." They'll interview current chief of staff Ryan Jackson today, according to the aide. Pro's Anthony Adragna reported committee staff also interviewed policy adviser Samantha Dravis on Thursday.

INDIAN AFFAIRS NOM CONFIRMED: The Senate confirmed Tara Sweeney to be assistant secretary for Indian Affairs at Interior on Thursday by a voice vote. Sweeney, who previously served as executive vice president of external affairs for Arctic Slope Regional Corporation, was nominated back in October, and was advocated for by Senate Energy Chairman Lisa Murkowski. Sweeney was welcomed in a tweet by Zinke , who said he was "excited" for her arrival. "She is the first Alaska Native woman to hold the position," he tweeted. "A historic day for Alaska and America!"

IG RELEASES SUMMARY ON NPS ALLEGATION: Interior's inspector general released a brief summary of its investigation into allegations made against National Park Service Deputy Director P. Daniel Smith. An anonymous employee earlier this year said Smith made an obscene gesture and used vulgar language while standing in the hallway of the agency's headquarters, which prompted OIG to launch an investigation in May. The summary stopped short of condemning Smith, and cites a retelling by Smith and another NPS employee, who denied that Smith touched himself obscenely or used any vulgar language. The OIG said it could not find anyone else who witnessed the incident.

Smith, however, "acknowledged he gestured with his hands to simulate urinating while telling a story and stated that in hindsight, the story and the gesture were not appropriate for work," according to the summary. "The other employee said he was not offended by the story or the gesture but also acknowledged that they were inappropriate for the workplace."

THIS LAND IS OUR LAND: Montana Sen. Jon Tester is out with a new statewide ad promoting his stance on public lands, Campaign Pro's Zach Montellaro reports. The ad features a video of Tester speaking about his roots. "My family has made a living off the land in Montana for over 100 years," Tester says, adding, "As long as I'm in the U.S. Senate, Montana is not for sale." Watch the ad.

GAO: DOE SHOULD IMPROVE SPR OVERSIGHT: The Government Accountability Office released a report Thursday that offers several ways for DOE to modernize the Strategic Petroleum Reserve. The report found DOE had not identified the optimal size of the reserve, and said the last review conducted by the department "was limited in several ways." GAO made several recommendations, including a suggestion that Congress "may wish to consider setting a long-range target for the size and configuration of the SPR," taking into account issues like

AMERICAN OVERSIGHT

future oil production projections and U.S. International Energy Agency obligations.

"By not examining a full range of options, DOE risks missing beneficial ways to modernize the SPR while saving taxpayer resources," according to the GAO report, which was requested by the House Energy and Commerce Committee. "We will give GAO's recommendations careful consideration as the committee considers legislative options to address the concerns raised by this report," a joint statement from the E&C energy subcommittee's leadership said.

REPORT: MORE CAN BE DONE TO FIGHT BLACK LUNG: Although cases of black lung disease has declined in miners in most areas, excluding Appalachia, a new report from the National Academies of Sciences, Engineering, and Medicine says a "fundamental shift" is required in the way operators approach exposure control in order to eliminate the disease. The report found operators are complying with regulatory requirements, but the basis of such requirements could improve by recommending improvements to current monitoring technologies, as well as building out the research currently being done, among other guidance. Read the report.

AGs JOIN EPA SCIENCE PANEL SUIT: Attorneys general from nine states filed an amicus brief this week in support of the plaintiffs suing over EPA's policy barring scientists who receive agency grants from serving on its scientific advisory committees. "The advisory committee Directive has already caused dozens of uniquely qualified scientists to be removed from their posts on EPA advisory boards and committees, while leaving in place (and even increasing) persons affiliated with regulated industries," the brief states. AGs from Washington, California, Illinois, Iowa, Maryland, Massachusetts, New Jersey, New York and Oregon, and the Pennsylvania Department of Environmental Protection joined the filing.

MAIL CALL! RECONSIDER THIS: A bipartisan and bicameral group of lawmakers is calling on Perry to reconsider DOE's move to have power marketing administrations report directly to the assistant secretary for electricity instead of the deputy secretary, as has been tradition. "We are concerned that these changes could lead to decisions that are not in the best interest of Pacific Northwest ratepayers," they write.

A TIMELINE EMERGES: The White House is hoping to select a Supreme Court nominee before Trump leaves for his European trip on July 10, POLITICO's Nancy Cook reports. Whomever Trump nominates will likely get a confirmation vote after Labor Day, Senate Majority Whip John Cornyn said Thursday, telling POLITICO's Elana Schor he'd be "shocked" if the vote occurred before then. Cornyn, however, added he is "not opposed" to moving more quickly but said the process to confirm a nominee (i.e., background checks) would take quite a bit of time.

SENATE PASSES FARM BILL: The Senate Thursday passed a farm bill, H.R. 2 (115), which includes a provision reauthorizing the National Flood Insurance Program. But with the NFIP expiring on July 31, senators are looking at other vehicles to attach a short-term extension, Pro's Zachary Warmbrodt reports.

MINN. PUC APPROVES LINE 3: The Minnesota Public Utilities Commission approved

AMERICAN OVERSIGHT

Enbridge's proposed Line 3 tar sands pipeline on Thursday in a unanimous 5-0 vote, MPR News reports. The decision came with several conditions, the website writes, "including a decommissioning trust fund to ensure the new pipeline will be retired responsibly decades from now." Green groups have urged the PUC to reject the pipeline, especially following a 2010 Enbridge pipeline spill in Kalamazoo, Mich. Read more.

VISUALIZE IT: JUST Capital, a nonprofit business tracking group, will release today its new "Environmental Explorer" interactive tool, which allows users to explore companies based on their environmental impact, including recycling, waste management and electricity use. See it here.

Stories from POLITICO Pro

GOP FERC commissioner slams latest bailout pitch Back

By Darius Dixon | 06/12/2018 03:17 PM EDT

Republican Commissioner Rob Powelson positioned himself Tuesday as FERC's leading critic of the Trump administration's call to rescue financially struggling coal and nuclear plants, panning the latest approach floated by the White House.

Letting the Energy Department prop up money-losing power plants in the name of national security is not necessary to maintain a resilient electric grid, Powelson said at a Senate Energy and Natural Resources Committee hearing with all five FERC commissioners. A former chairman of the Pennsylvania Public Utility Commission, Powelson said electric service was not disrupted by power company bankruptcies during his time as a state regulator.

"These markets are operating hyper-efficiently," he said. "Now, we're seeing the best of all worlds: New resources, cleaner resources, more efficient resources coming in the marketplace. The markets are creating orderly entry and exit, and to put someone's risk capital at play I have grave concerns about that."

The idea of a government bailout "goes against everything we talk about in terms of supply-and-demand side economics," Powelson added.

DOE is pondering the use of the Federal Power Act and the Defense Production Act to force coal and nuclear power plants to keep operating in the face overwhelming competition from cheap natural gas and growing renewable power that has pushed big power units into retirement. A memo that circulated at the National Security Council earlier this month cited possible attacks on natural gas pipelines among the justifications for DOE's latest national security approach.

Speaking to reporters after the hearing, Powelson acknowledged that national security "should be part of the conversation," but he seemed skeptical of the administration's shifting justifications for a bailout.

"All of a sudden we have a national conversation that went from potential reliability issues, now to national security issues," he said, referring to DOE's ill-fated effort last year to push for payments to power plants with 90 days of fuel on-site, an earlier tactic aimed at supporting coal and nuclear power. "I struggle with the original posture of saying the FERC's not doing enough. I categorically disagree."

Chairman Kevin McIntyre acknowledged that Energy Secretary Rick Perry has the authority to declare a grid emergency that could require retiring power plants to keep operating, but he did not offer any opinion on the merits of such an approach.

Democratic FERC Commissioner Richard Glick, who once worked for former Energy Secretary Bill Richardson, said the agency has not built up a solid record for declaring a national

AMERICAN OVERSIGHT

emergency.

At the end of the Clinton administration, the Western energy crisis was still unfolding and Richardson invoked the emergency powers in the Federal Power Act and made use of the Defense Production Act to force the sale of natural gas supplies into the region because a defense facility was impacted, he said.

"We created a record. We have a record that it truly was an emergency," Glick said. "In this case, I think what we're trying to get a solution before we actually build a record suggesting that there's actually an emergency."

FERC Commissioner Neil Chatterjee, a former aide to Senate Majority Leader Mitch McConnell, tried not to dismiss DOE's proposal out of hand.

"It's a leaked memo. We don't know what the administration intends to do with it. But I think people are also too quickly dismissing it," Chatterjee said. "I've read the memo. There are a number of points in the memo that are thoroughly well-cited and researched and I think we can disagree what the remedy might be but I think they raise a real issue."

On Monday, Chatterjee and Glick penned an editorial that called for setting up a regiment of mandatory standards for natural gas pipeline, the infrastructure that DOE argues poses a risk to national security.

Senate Energy and Natural Resources Chairwoman Lisa Murkowski told regulators that she's been frustrated with FERC's pace of addressing market concerns and argued that that may have egged DOE on to jump into the power markets.

"I have my concerns with the steps that the Department of Energy is reported to be considering. But I also recognize that they're trying to fill a perceived vacuum," the Alaska Republican said at Tuesday's hearing.

"In my view, FERC should be pointing the way on policy improvement that address grid vulnerabilities while reaffirming our commitment to competition in wholesale power markets," she said. "And frankly, as one who has been concerned about this issue for years now, I find it unfortunate that prior commissions did not lead more effectively."

Powelson: No 'subplot' to surprise FERC exit Back

By Darius Dixon | 06/28/2018 08:20 PM EDT

FERC Commissioner Rob Powelson says his surprise decision to resign after just one year at the

AMERICAN OVERSIGHT

commission had nothing to do with his frequent objections to one of the Trump administration's main energy policy goals.

The Republican former state regulator has been one of the most vocal critics of the Energy Department's efforts to rescue economically struggling coal and nuclear power plants, but he said that position was not a factor in his decision to leave the commission. In mid-August, Powelson will take over as CEO of the National Association of Water Companies. He simply jumped at a once-in-a-lifetime opportunity to take a great job that would allow him to avoid commuting to Washington from his home near Philadelphia.

There is no "subplot to this," he told POLITICO on Thursday, saying it was a decision he made with his family.

"I'm at peace. I know people want to be like, 'Argh, he got forced out! He pissed off the president or Rick Perry.' I'm free to speak my mind now more than ever. And as a Philly boy, I will let it fly," he said in a phone interview after announcing his plan to resign.

"No one came at me and said, 'You need to move on,'" he added. "You know if that would ever happen, I would never do it anyway. ... If I was done wrong, I'd tell you about it. But life is better than I deserve it to be."

Powelson's departure could also leave FERC's four remaining commissioners unable to approve new interstate natural gas pipelines over Democratic objections related to climate change or the agency's overall process for assessing the need for those projects. A former chairman of the Pennsylvania Public Utility Commission, Powelson also was one of the strongest advocates for state regulators, especially in PJM — the regional grid that would be most affected by the Trump administration's coal-boosting efforts.

Leaving in August means that Powelson will have served on the commission for just one year of a term that was scheduled to run through mid-2020, making his the shortest tenure in agency history since the 1960s, when FERC was still the Federal Power Commission. It also gives President Donald Trump an opportunity to replace Powelson with a regulator who is friendlier to his pro-coal policies.

Powelson said he didn't expect to be at FERC for such a short time, but felt he couldn't pass up the job offer, especially after the National Association of Water Companies told him it was planning to move its headquarters from Washington to Philadelphia. He has two sons, a rising seventh-grader and a rising 10th-grader, and said that his job change was in part a decision between career moves and an opportunity to be closer to family.

"I had every intention to stay longer. But honestly, I served eight and a half years on the Pennsylvania commission. I love this place. The people are great [at FERC]," he said. "But for me to say no — that opportunity is not coming around again, and I knew that. There was just too much alignment for me not to take it."

The outgoing commissioner also said that he didn't pine for the FERC chairmanship, noting that

AMERICAN OVERSIGHT

few people run a state commission as well as FERC like Texas' Pat Wood did.

"I looked at Chairman [Kevin] McIntyre's desk the other day and I don't miss the piles of paper on my desk. I'm perfectly at peace. I was honored to be a commissioner. It's a stressful job to be a chairman and you're running the agency," he said.

"I've done the chairmanship duty [in Pennsylvania] and I'm perfectly at peace with that," he said. With emphasis and a chuckle, Powelson added: "Perfectly at peace, trust me."

He said he told all the commission leadership colleagues about his plans face to face, and sent an all-hands email to FERC staff Thursday.

Powelson warned that he's excited to talk about "water resiliency" and the "water grid" in a post-Flint, Mich., world that is also looking at the energy-water nexus. The association represents water and wastewater utilities such as American Water and Aqua America, among other companies.

"Now I get to be a pain in the ass on water policy," he said.

Rick Perry takes aim at New York Back

By James Hohmann | 06/19/2013 05:01 AM EDT

Rick Perry stars in an ad out Wednesday that coincides with his swing across the Northeast to lure jobs to Texas.

The one-minute, campaign-style video — shared first with POLITICO — attacks New York, where the governor is spending the day, as a high-tax, high-regulation state. (Watch the ad.)

New York Mayor Michael Bloomberg's ban on large sodas is referenced, and New York Gov. Andrew Cuomo is mentioned by name in the first 30 seconds, which plays out like an attack ad.

The second half turns triumphal, with feel-good music and B-roll of Texas skylines.

"Why have more jobs and businesses moved to Texas than any other state? Our state is No. 1 for business because we have no state income tax," Perry says, "and [Texas] has added more jobs than any state in the nation over the last five years."

The Republican governor, who many believe could run for president again in 2016, notes that Texas was just ranked No. 1 as a place to do business for the ninth straight year by Chief Executive Magazine.

AMERICAN OVERSIGHT

"If you're tired of the same old recipe — of over-taxation, over-regulation and frivolous litigation — get out before you go broke," Perry says, with the state capitol in Austin as a backdrop. "Texas is calling. Your opportunity awaits."

As Perry speaks, messages on screen declare: "Bigger opportunities. Bigger Dreams. A Bigger Future. Go Big With Texas."

Perry is in Connecticut and New York for five days. He has courted, among others, gun manufacturers facing stricter laws in the wake of the Newtown shootings.

This is the latest salvo in an aggressive campaign to attract businesses and raise the state's profile that has already sent Perry to Illinois and California.

The video appears on the Web site of "Texas Wide Open for Business," which is part of the Economic Development Division within the governor's office.

TexasOne, a privately funded entity, launched a $1 million radio and TV campaign in Connecticut and New York last week. They are also paying for the governor's trip.

Back

Perry warns of looming New York energy 'reckoning' Back

By Matt Daily | 06/28/2018 04:57 PM EDT

Energy Secretary Rick Perry today suggested that the federal government should consider preventing New York state from blocking new natural gas pipelines, echoing the national security argument he has put behind his efforts to bail out struggling coal and nuclear power plants.

Perry, who has criticized New York Gov. Andrew Cuomo for years, didn't mention the Democratic governor by name, but said political opposition to new gas infrastructure had left the state vulnerable to potential devastating power outages.

"I think we need to have a conversation as a country, is that a national security issue that outweighs political concerns in Albany, New York?" he said.

New York has blocked the expansion of the Constitution Pipeline by denying the project the water permits it needs to extend the pipeline that would carry gas from Pennsylvania.

Perry laid out a scenario to an audience at the World Gas Conference where a major winter storm and cyberattack on the power grid hit the state at the same time.

AMERICAN OVERSIGHT

"And people literally have to start making the decision about 'Do I keep my family warm? Do I keep the lights on?' Does the financial center of New York go dark? Do the hospitals shut down?" he said.

"At that particular point in time, the political leadership of that state that is keeping pipelines from being built — for strictly political purposes — are going to have real reckoning. I wouldn't want to be the governor of that state faced with that situation," he said.

Watchdog reports provide new ammo for Pruitt's critics Back

By Alex Guillén and Anthony Adragna | 04/16/2018 12:28 PM EDT

Critics of Scott Pruitt got fresh ammunition against the embattled EPA administrator on Monday, with two federal reports revealing that EPA had broken the law in building him a secure phone booth and that the agency had granted previously undisclosed pay raises of more than 20 percent to his political appointees.

EPA failed to notify lawmakers that it spent more than $43,000 to build a secure phone booth for Pruitt's office, according to a report from the Government Accountability Office on Monday morning. A few hours later, EPA's inspector general detailed the steep pay hikes — but did offer some support for Pruitt's claim that he had been unaware of controversial raises at the agency, though the internal watchdog stressed its investigation is ongoing.

Pruitt has drawn criticism that he has spent excessively on heightened security since he joined the agency last year. While Monday's GAO report focuses on the phone booth, Pruitt has also expanded his security staff to provide round-the-clock protection and spent heavily on first-class travel for himself and his security personnel to limit his exposure to potential threats from fellow passengers. He also faces questions over his use of special hiring authority to hire former lobbyists and political allies, but the IG's initial findings do not include evidence that he personally circumvented the White House in order to boost their pay, despite earlier reports.

Construction of the phone booth violated the Financial Services and General Government Appropriations Act since it cost well above the $5,000 limit that requires the agency to notify Congress, according to the GAO.

"We conclude that EPA violated section 710 when it obligated $43,238.68 for the installation of a soundproof privacy booth without providing advance notice to the Committees on Appropriations of the House of Representatives and the Senate," the GAO report said.

EPA defended the booth as necessary to Pruitt's work, arguing that it was similar to a computer

AMERICAN OVERSIGHT

or other equipment he uses. But GAO said the booth is clearly a "furnishment" under the law and thus should have been reported to Congress in advance. EPA did not say whether the phone booth had been certified as a Sensitive Compartmented Information Facility, or SCIF.

"This is just one more example of how Scott Pruitt is blatantly breaking laws and ethics rules that protect taxpayers from government waste, fraud and abuse in order to help himself to perks and special favors — and taking deliberate steps to hide everything from Congress and taxpayers," Sen. Tom Udall (D-N.M.) said in a statement to POLITICO.

Critics wondered why Pruitt needed a place to make secure phone calls in his office since the agency already had two SCIFs in its headquarters. Those SCIFs are located outside of Pruitt's secure suite of offices, however.

The GAO report specifically steered clear of judging whether installing the booth was the best or only way to provide Pruitt with a secure phone line.

An EPA spokeswoman defended Pruitt's need for the booth but acknowledged that Congress had not been informed ahead of time.

"EPA is addressing GAO's concern, with regard to Congressional notification about this expense, and will be sending Congress the necessary information this week," spokeswoman Liz Bowman said in a statement.

Sen. John Barrasso (R-Wyo.), who chairs the Environment and Public Works Committee, said he wants to hear more from EPA about why it did not properly inform Congress.

"It is critical that EPA and all federal agencies comply with notification requirements to Congress before spending tax payer dollars. EPA must give a full public accounting of this expenditure and explain why the agency thinks it was complying with the law," he said.

GAO is also reviewing Pruitt's appearance in a cattle industry video that asked for public comments on Pruitt's plan to repeal the Waters of the U.S. rule. Democrats similarly alleged his actions violated the Antideficiency Act.

Separately, EPA's inspector general released a preliminary report on its investigation into several political appointees who were hired or promoted under special authority given to Pruitt through the Safe Drinking Water Act.

The report shows a handful of political appointees at EPA saw their salaries boosted by 20 percent or more in their first year at the agency — in some cases over objections from the White House. But Pruitt did not personally sign off on the most controversial raises, leaving open the question of how involved he was in the decision. The IG said the interim report was meant to "provide certain factual information" and "does not present any conclusions or recommendations."

None of the EPA staffers were named in the report, but the salary and other information provided

AMERICAN OVERSIGHT

aligns with names included in previously released employment documents reviewed by POLITICO.

The IG's report shows Sarah Greenwalt, senior counsel to Pruitt, received a $56,765 raise on April 1, while Millan Hupp, director of scheduling and advance, received a $28,130 raise the same day. Those figures are in line with The Atlantic's report that EPA circumvented the White House to boost their pay.

Chief of staff Ryan Jackson signed forms authorizing both of those pay increases, each time writing "Ryan Jackson for Scott Pruitt," according to documents included with the IG report. Jackson had said last week that he approved the raises.

EPA said those raises have been reversed, but the IG was unable to back up that claim. "We requested from the agency any documentation indicating modifications to the salary of any of the employees subsequent to the personnel actions noted above. As of report issuance, the agency was unable to provide us with complete information or confirmation of any modifications," according to the report.

The IG's office also uncovered several previously unreported raises, some of which were granted using the drinking water authority and others achieved by changing the employees' job classifications.

In mid-February, Forrest McMurray, an advance staffer from Oklahoma and, like Hupp, a relatively recent college graduate, saw his salary increase 25 percent through the same SDWA process that was later applied to Greenwalt and Hupp. (Bloomberg News had initially reported on Monday that the third raise granted via that process was to Samantha Dravis, the association administrator running the Office of Policy. But the third salary increase corresponds with McMurray's employment information, and Bloomberg removed Dravis' name from an updated version of its article.)

A fourth aide, speechwriter Lincoln Ferguson, received 25 percent pay increase last September after receiving a renewed position with the SDWA authority. Ferguson worked for Pruitt when he was Oklahoma attorney general.

Pruitt signed off on the raise for Ferguson, but not McMurray, according to the IG report.

Two other political appointees — Liz Bowman, the associate administrator for the Office of Public Affairs, and Kevin Chmielewski, the advance staffer who last week made allegations about mismanagement and wrongdoing at EPA to both Democrats and Republicans — appear to have received raises of more than 20 percent last summer when their employment classification was increased. Chmielewski departed the agency in mid-February.

Brittany Bolen, the senior deputy associate administrator in the Office of Policy, had received a 1.6 percent raise last summer when she underwent the same increase in classification.

The IG report was part of a larger investigation into EPA's use of a special hiring authority under

AMERICAN OVERSIGHT

the SDWA, which allows Pruitt to hire up to 30 staffers without having to go through normal hiring procedures or subjecting the staffers to the Trump administration's ethics pledge.

The SDWA authority was intended to allow EPA to bring on board engineers or scientists with subject matter expertise. Democratic critics alleged that Pruitt used it to get key political appointees in place quickly or to bypass ethics issues, and asked for the IG to review the matter. But EPA has dismissed those criticisms.

"Salary determinations for appointees are made by EPA's chief of staff, White House liaison, and career human resources officials. Salaries are based on work history; and, any increases are due to either new and additional responsibilities or promotions," EPA spokesman Jahan Wilcox said.

Records released last summer by EPA show that a dozen EPA political staffers were working in "administratively determined" positions as of mid-July 2017, while another 22 had been converted to permanent political appointees or left the agency.

Among those still working under the special hiring authority at that time were Nancy Beck, the deputy for EPA's chemicals office; Byron Brown, Pruitt's deputy chief of staff; air adviser Mandy Gunasekara; and a number of public affairs officials, including Michael Abboud, James Hewitt, Ferguson and Wilcox. Their status may have changed since.

The IG's audit of EPA's use of the hiring authority will continue, with a final report expected at a later date.

Oversight will interview two more Pruitt aides this week Back

By Anthony Adragna | 06/28/2018 02:47 PM EDT

House Oversight Committee staff are interviewing former EPA policy adviser Samantha Dravis today as they continue their probe into allegations of lavish spending and unethical behavior by Administrator Scott Pruitt, a committee aide confirmed.

In addition, staff plan to interview Pruitt's chief of staff Ryan Jackson on Friday, the aide said.

Dravis and Jackson's interviews come after the committee already spoke with multiple other members of Pruitt's inner circle: former security chief Pasquale "Nino" Perrotta, scheduler Millan Hupp and senior EPA counsel Sarah Greenwalt.

Chairman Trey Gowdy (R-S.C.) had also requested an interview with former deputy chief of

AMERICAN OVERSIGHT

staff turned whistleblower Kevin Chmielewski by June 22, but it's not immediately clear when that interview will occur.

The latest interviews were first reported by E&E News.

Tester launches new TV ad on public lands Back

By Zach Montellaro | 06/28/2018 02:43 PM EDT

Sen. Jon Tester (D-Mont.) launched a new statewide ad called "Not for Sale," touting his stance on public lands and featuring video of Tester speaking with hunters and fishermen.

The positive ad opens with the senator talking about his family's roots in the state — "My family has made a living off the land in Montana for over 100 years," Tester says — and features a Montanan praising him, saying "he understands the importance of public lands to Montanans and his values are our values."

AMERICAN OVERSIGHT

"As long as I'm in the U.S. Senate, Montana is not for sale," Tester says at the end of the ad.

Tester is facing Republican state Auditor Matt Rosendale in November.

White House wants Trump to nominate a justice before Putin trip Back

By Nancy Cook | 06/28/2018 05:07 PM EDT

The White House hopes to have a Supreme Court nominee chosen by the time President Donald Trump leaves for his European trip on July 10, according to one Republican close to the White House and one person involved with the judicial selection process.

The White House is expected to start interviewing candidates early next week, with the White House's top attorney, Don McGahn, leading that process. The goal is to hold confirmation hearings in August or September, so that any confirmed justice can join the court in early October, before the next term.

Top contenders include Raymond Kethledge, Thomas Hardiman, Amy Coney Barrett, Brett Kavanaugh, and Amul Thapar — though the person involved with the process stressed that other potential nominees from Trump's list of judges could also get a "hard look."

Trump and a cadre of yet-to-be-determined senior administration officials are expected to interview a handful of finalists, similar to how the White House handled the selection of Trump's first Supreme Court pick, Neil Gorsuch.

"The administration has already been through this once, so that really helps a lot. There is already a system in place," said the person involved with the process.

Several outside groups including the Koch-backed Americans for Prosperity and Judicial Crisis Network are expected to help to push the Republican nomination, especially once Trump announces his nominee.

The Judicial Crisis Network spent more than $10 million to support the Gorsuch confirmation, and JCN chief counsel Carrie Severino predicted the group's spending would exceed that figure this time around. With Democrats aiming to persuade moderate Republicans to block a nominee, she added, "this nomination will be more contentious."

But after months of the president dividing his party over thorny issues like immigration and trade, the Kennedy retirement offers a unique opportunity to motivate Trump's base and, potentially, to mobilize voters frustrated with Trump to turn out the GOP in the midterm

AMERICAN OVERSIGHT

elections anyway.

"Republicans have been looking for an issue to ensure their base turns out in November, and I think we've found it with the Supreme Court pick," said Andy Surabian, a Republican strategist and former special assistant to the president and White House deputy strategist in the Trump administration. "I know the pick will happen before the elections, but messaging-wise, I don't think you can have a better one than: 'Do you want the party of Maxine Waters deciding the fate of the Supreme Court?'"

The president seemed ecstatic about the open seat during a Wednesday evening rally in North Dakota. There, he pledged to select a judge who could serve for 40 to 45 years before doing his best to give supporters a sense of urgency about the need for continued Republican control Congress.

"Justice Kennedy's retirement makes the issue of Senate control the vital issue of our time," Trump said. "It's one of most important things we can do.

This opening gives the White House a chance to energize its base for an election many had expected to favor the Democrats. And it calms some tension inside the administration about what messages Republicans should emphasize in the midterms — the tax bill, economy, work on opioid addiction and drug prices, or hard-line immigration policies.

"It's the policy issue of Supreme Court nominations, not tax cuts, that truly unites the Republican Party, as evident by President Trump's debate answer on this topic that fueled his home-stretch spring in 2016," said Jason Miller, a former top aide to Trump during the campaign and transition.

In recent weeks, Republicans have been split apart by the questions of potential tariffs or hard-line immigration moves. While tariffs and a border wall fire up Trump's base of white, working-class voters, those issues have not resonated as well within the business, donor, or establishment Republican community.

Republican leadership on the Hill had hoped that in 2018 Trump's midterm message would focus primarily on the healthy state of the economy and the Republican tax bill of 2017, yet the president himself has had trouble sticking to that message at several recent rallies.

Yet a Supreme Court nomination — which ultimately could affect health care, abortion rights, affirmative action, freedom of religion and speech, guns rights, and corporate regulations - brings together the disparate coalitions of the Republican Party.

Already the anti-abortion group, SBA List, has volunteers on the ground in Ohio, Florida and Indiana going door-to-door to try to woo female voters, Hispanics, and Democrats to support anti-abortion legislation. They just hired field staff to allow them to expand the operation into North Dakota and West Virginia, home states of two vulnerable Senate Democrats, Heidi Heitkamp and Joe Manchin, respectively.

AMERICAN OVERSIGHT

"The Senate is where Supreme Court picks are confirmed. That is one of our driving reasons for engaging at this level," said Mallory Quigley, a spokesperson for SBA List.

On Thursday night, Trump met with a group of bipartisan senators, including Democrats Heitkamp, Manchin and Joe Donnelly and moderate Republicans Susan Collins and Lisa Murkowski, to discuss the Supreme Court vacancy.

Just as they hope to unite conservatives, Republicans are hoping the issue divides Democrats. Already the White House is eyeing the 10 Democratic senators up for reelection this fall in states that Trump overwhelmingly won in 2016 — and hoping to pressure them into supporting the nominee.

The greatest hope of Trump advisers is that a Supreme Court pick will dominate the news so much that it will not allow Democrats to talk about their vision for health care or the economy or taxes — or to present any positive, forward-looking message.

"There will be no Democratic messaging on jobs, the economy or health care that cuts through, as many will be focused on hypothetical culture wars that make suburban swing voters uneasy," Miller said.

Eliana Johnson contributed to this report.

Cornyn: Supreme Court confirmation vote likely after Labor Day Back

By Elana Schor | 06/28/2018 12:51 PM EDT

The second-ranked Senate GOP leader on Thursday suggested the Supreme Court confirmation vote to replace Anthony Kennedy would take place sometime in September, saying he "would be shocked" if the vote happened before Labor Day.

Majority Whip John Cornyn (R-Texas) added that he is "not opposed" to moving President Donald Trump's nominee more quickly, but he noted that background checks on Trump's still-unnamed pick are likely to take time.

Republicans have already made clear that they don't plan to heed Democratic calls for a delay in the Supreme Court confirmation until after November's election to give midterm voters a chance to weigh in.

Supreme Court nominees since the Ford administration spent an average of 67 days between their nomination and final confirmation, according to a 2015 report from the Congressional Research Service — a window that Cornyn told reporters he "would endorse" as a goal. Of

AMERICAN OVERSIGHT

course, that figure doesn't include President Barack Obama's Supreme Court nominee, Merrick Garland, whom Republicans blocked and denied a confirmation hearing in 2016.

Republican senators anticipate dedicating much of August to passing appropriations bills, meaning that a final Supreme Court vote would wait until September. The high court's next term is set to begin on the first Monday of October.

Senate Judiciary Chairman Chuck Grassley (R-Iowa), however, declined to commit to any timetable.

"Everything is going to be judged by when the president makes an appointment and what [Majority Leader Mitch] McConnell wants to schedule," Grassley said. At this point, it's all speculation. And there's no point in speculating."

Cornyn also cautioned Trump against selecting any nominee with a publicly stated position on overturning court precedents such as Roe v. Wade.

"I think that would be a terrible mistake, for the president to nominate somebody who had that sort of agenda," Cornyn told reporters, adding that "we don't need judges who have either personal or political or ideological agendas, in my view. And I think that ought to comfort all of us."

It's common for presidents of both parties to avoid picking a nominee with a lengthy paper trail for opponents to seize on, though Trump has previously said he would want to appoint anti-abortion judges to the high court.

One member of Trump's Supreme Court shortlist, Sen. Mike Lee (R-Utah), has championed anti-abortion legislation, although he suggested Thursday that Roe might be safer after Kennedy's retirement than some on the left have argued.

Senate passes farm bill with flood insurance extension Back

By Zachary Warmbrodt | 06/28/2018 06:09 PM EDT

The Senate today passed a farm bill, H.R. 2 (115), that includes a provision reauthorizing the National Flood Insurance Program before it expires in the middle of hurricane season — a victory for coastal lawmakers.

But with time running out before the program's July 31 expiration date, and the enactment of the

AMERICAN OVERSIGHT

farm bill not a sure bet by then, senators are already looking at other vehicles to attach a short-term extension.

John Kennedy (R-La.) said he's looking at an upcoming FAA bill. Kennedy and Bill Cassidy (R-La.) pushed for the six-month reauthorization in the farm bill this week, and they've also introduced the extension as stand-alone legislation.

"We're not going to let this program expire," Kennedy said. "If lightning strikes and we get a [long-term] reform bill by the 31st, that would be great. But it's not likely to happen."

EPA Sets Hard Deadline for Enforcing Obama-era Ozone Restrictions

By John Siciliano, 1/4/18

The Environmental Protection Agency has set a hard spring deadline for listing regions of the country that cannot meet the Obama administration's strict rules for smog-forming ozone emissions.

The EPA plans to complete designations for all of the non-compliant areas no later than April 30, the agency announced in the Federal Register Thursday.

The Trump EPA had tried to delay formally designating the regions as non-attainment zones, which would force some cities and other areas to establish special pollution control plans that critics of the rule have argued would deter development and economic growth.

A court blocked EPA Administrator Scott Pruitt's delay strategy and directed the agency to

AMERICAN OVERSIGHT

enforce the regulations. Since the court order, environmentalists have held the agency to meeting deadlines for designating the non-attainment regions, which is a key part of implementing the regulations.

EPA has missed the deadlines, saying it needs more time to collect data from states.

Thursday's notice ends that data collection period.

In November, the EPA said 2,646 counties, including Indian country in those counties, are meeting the ozone standards, and listed three other counties as unclassifiable. Thursday's notice means the EPA intends to designate all of the remaining areas as non-attainment regions.

In a separate action, EPA also proposes taking a large area that includes Missouri, including St. Louis, and Illinois off the non-attainment list for related rules for controlling soot pollution.

The action is meant to get feedback from stakeholders on the EPA's proposed plan to designate the large bi-state area as meeting the rules based on new pollution data from 2017.

"EPA expects to approve the area's re-designation," the agency said. The proposal becomes effective Friday.

Columbia County Spotlight

St. Helens Approves Contract for Brownfield Site Study

By Nicole Thill, 1/5/18

City Council votes to approve contract with Maul Foster Alongi to oversee grant-funded program

St. Helens will continue its working relationship with a Portland-based consulting company to conduct site studies of potential brownfields in the city.

The St. Helens City Council voted Wednesday, Jan. 3, to approve a contract with Maul Foster Alongi, placing the environmental engineering and consulting company in charge of project management for brownfield site identification.

In May the city received $300,000 in grant funding from the Environmental Protection Agency to conduct brownfield assessments throughout the city. Brownfields are site that have been

AMERICAN OVERSIGHT

contaminated by potentially hazardous substances or pollutants left behind by previous development on the land.

The city approved a work plan in July that outlined the project scope to perform the brownfield assessments. The main purpose of the EPA-funded project will be to identify key areas that are limited in their ability to be redeveloped due to a brownfield designation. The goal will be to conduct six environmental site assessments in phase one, six assessments in phase two, convene a brownfield advisory committee and host two public meetings to determine site prioritization and reuse planning.

Approval of the plan was the first step, however, and the city recently put out a request for proposals to seek an applicant to oversee implementation of the plan. The city issued a request for qualifications in November and recently reviewed the applications it received.

City Administrator John Walsh explained that brownfield site identification is a specialized field, and the city received only three proposals from companies interested in taking on the project management role.

The city has worked with Maul Foster Alongi on previous projects, including the development of the waterfront framework plan that outlines development possibilities for waterfront land the city owns.

Reuters

https://www.reuters.com/article/us-usa-pesticides-monsanto/monsanto-wins-support-from-11-u-s-states-in-california-cancer-dispute-idUSKBN1ES269

Monsanto Wins Support from 11 US States in California Cancer Dispute

By Tom Polansek, 1/3/18

Monsanto Co has won support from eleven U.S. states in its attempt to stop California from requiring cancer warnings on products containing glyphosate, ratcheting up a legal fight over the company's popular weed killer.

Missouri, home to Monsanto's headquarters, along with other farm states including Iowa and Indiana, said in court documents on Tuesday that the warnings would be misleading because there is no definite link between glyphosate and cancer.

Midwest businesses would need to include warnings on glyphosate products if California

AMERICAN OVERSIGHT

requires them or stop selling such goods because they may end up in the Golden State, according to the states' filing.

California added glyphosate, the main ingredient in Monsanto's Roundup herbicide, to its list of cancer-causing chemicals in July 2017 and will require products containing the chemical to carry warnings by July 2018.

The state acted after the World Health Organization's International Agency for Research on Cancer concluded in 2015 that glyphosate was "probably carcinogenic."

"The mandate imposes confusing and potentially inconsistent obligations on non-resident businesses, creating a strong incentive to abandon glyphosate markets altogether," the states' filing said.

For more than 40 years, farmers have applied glyphosate to crops, most recently on soybeans that Monsanto genetically engineered to resist the herbicide. Roundup is also sprayed on residential lawns and golf courses.

The controversy in California is a headache for the company as it faces a crisis around another herbicide based on a chemical known as dicamba that has been linked to U.S. crop damage.

Monsanto, which is being acquired by Bayer AG for $63.5 billion, developed the dicamba-based product following an increase in weeds resistant to glyphosate.

The 11 states are supporting a federal lawsuit Monsanto, the National Association of Wheat Growers and other agricultural groups filed in November to stop the state from requiring glyphosate warnings.

Monsanto said Wednesday it had discussed California's mandate with officials in agricultural states as it proceeded with the lawsuit.

AMERICAN OVERSIGHT

California's Office of Environmental Health Hazard Assessment (OEHHA), which is named in the lawsuit, declined to comment. The office previously said it stands by the decision to include glyphosate on the state's list of products known to cause cancer, as required under a rule known as Proposition 65.

"Proposition 65 is 30 years old and for every one of those years there have been strenuous attempts to kill it on the ground that it's different from other states," said David Roe, the rule's primary author.

"They've always failed."

Politico: Morning Energy

https://www.politicopro.com/newsletters/morning-energy/2018/01/zinkes-drilling-plan-lands-with-a-thud-065911 **Justices to Discuss Energy Cases Today**

By Kelsey Tamborrino, 1/5/18

The Supreme Court meets privately today for their regular conference with several high-profile energy-related cases on its list. It's not clear whether any of these cases will pique the justices' interest, so we'll keep an eye on Monday morning's release of orders from today's conference. Here's a brief rundown of the energy cases by topic.

EPA coal jobs study: Murray Energy is appealing the 4th Circuit ruling from last year that said EPA was not legally obligated under the Clean Air Act to produce a study specifically considering coal industry job losses caused by its regulations. The Trump administration opposes requiring EPA to produce the study Murray wants and has urged the Supreme Court not to take the case. But EPA Administrator Scott Pruitt said in October that his agency will give greater consideration to coal jobs via some type of study in the future. The case is 17-478, Murray v. Pruitt.

AMERICAN OVERSIGHT

NAAQS implementation: The 9th Circuit ruled in 2016 that EPA wrongly approved part of Arizona's particulate matter clean-up plan that counted already completed actions — such as paving dirt roads — as required "contingency measures" meant to help Maricopa County meet the standard. Arizona argues that similar approvals have happened dozens of times in recent decades, and that the 5th Circuit ruled previously in favor of that scheme. The Trump administration urged the Supreme Court not to get involved, saying the circuit split "does not create any unmanageable practical difficulties." The case is 16-1369, Arizona v. Bahr.

Dow Industrials Cross 25,000 for First Time

By Corrie Driebusch, Michael Wursthorn and Georgi Kantchev, 1/5/18

The Dow Jones Industrial Average jumped past 25000 for the first time Thursday, the index's fastest run to a fresh 1,000-point milestonein history.

The S&P 500's long-running rally also reached a new landmark Thursday, becoming the greatest bull market in the postwar era. The broad index has more than quadrupled since the bull market began in March 2009, surpassing the tech-fueled rally of the 1990s, according to the research firm Leuthold Group, which excluded dividends from its calculations. The Dow has risen 283% over that same period, according to the WSJ Market Data Group.

Thursday's moves marked the latest feats for a rally that has repeatedly wrong-footed skeptics and sent stock indexes around the world to multiyear highs. The Dow industrials hit five thousand-point milestones last year, the most such records in its 120 years.

Faster economic growth around the globe and improving sentiment from consumers and businesses have helped power this rally in recent weeks. Economic data in the first days of the new year continued to suggest steady expansion in the U.S., China and Europe.

"The turn of the calendar year doesn't change the dynamics of economic growth and earnings growth," said Kate Warne, investment strategist at retail brokerage Edward Jones. "We shouldn't be surprised that markets continue to move higher because fundamentals continue to be positive and investor optimism is actually improving rather than investors becoming more cautious."

The Dow industrials, which heavily weights industrial giants such as Boeing and Caterpillar, gained 152.45 points, or 0.6%, to 25075.13. It took the Dow industrials 23 trading days to reach 25000 from 24000, ahead of the 24-day spans that carried the index to 11000 in 1999 and 21000 in March.

AMERICAN OVERSIGHT

The S&P 500 climbed 10.93 points, or 0.4%, to 2723.99, while the Nasdaq Composite added 12.38 points, or 0.2%, to 7077.91. Each major index closed at fresh records.

Shares of financial firms led markets higher Thursday as a strong private jobs report raised investors' expectations for further interest-rate increases.

Businesses across the country added 250,000 workers in December, according to payroll processor Automatic Data Processing Inc. and forecasting firm Moody's Analytics, topping economists' expectations. The U.S. Bureau of Labor Statistics will release its monthly jobs report on Friday.

Goldman Sachs Group gained $3.54, or 1.4%, to $256.83, contributing about 24 points to the Dow's gain. American Express Co. added 1.65, or 1.7%, to 100.85, while JPMorgan Chase & Co. rose 1.54, or 1.4%, to 109.04.

"Financials had been out of favor for some time, but they've been benefiting from this [tax] stimulus," said Jeff Zipper, a portfolio manager and managing director at U.S. Bank's Private Client Reserve.

He added the firm has been increasing clients' exposure to financial stocks as Republicans passed their tax overhaul, and on expectations that the gap between the two-year and 10-year Treasury note yields will increase after nearing its narrowest level in a decade last month. A wider gap between short- and long-term interest rates tends to boost lenders' profits.

The Dow industrials rose 25% in 2017 as investors bet on solid corporate earnings and a pickup in global economic growth. Analysts and investors say sectors like financials and energy are poised to play a bigger role in pushing markets higher. Recently, the price of oil has risen above $60 a barrel, providing a boost to many of the oil-and-gas companies that languished much of last year.

Shares of Chevron surged in the second half of 2017. The oil producer's stock has risen 21% in the last six months, roughly double its gain for all of last year. Exxon Mobil has climbed nearly 6% over that same period despite finishing last year lower.

"The risk sentiment is absolutely roaring right now," said Richard Benson, co-head of portfolio investments at Millennium Global Investments. "As an investor, it's easy to develop a fear of missing out."

While some investors are excited by the swift pace at which the Dow climbed the latest 1,000 points, many analysts are quick to note that as the blue-chip index rises, the percentage move required to leap to a new milestone becomes significantly easier. For instance, the move to 11000 from 10000 required a gain of 10%, while the rise from to 25000 from 24000 needed a 4.2% increase.

The market's steady climb continues to worry some money managers who question whether

AMERICAN OVERSIGHT

stock valuations have become stretched, even as earnings for S&P 500 companies this year are projected to grow at their best rate in seven years. A recent jump in investor exuberance has also put some analysts and investors on edge.

"If investor optimism gets excessive, and I think it's close to being excessive, I wouldn't be surprised to see" a pullback in the market, said Bruce Bittles, chief investment strategist at Baird.

Reuters

https://www.cnbc.com/2018/01/04/bomb-cyclone-hits-us-east-coast-energy-power-supply.html

'Bomb Cyclone' Hits US East Coast Energy, Power Supply

By Scott DiSavino, Devika Krishna Kumar, 1/4/18

An intense winter storm froze pipes and disrupted services at refineries on the U.S. Atlantic coast on Thursday, sending fuel prices higher as heavy snowfall and high winds caused electricity outages for tens of thousands of Americans.

Some 65,000 homes and businesses along the U.S. East Coast are without power, and that number is expected to swell on Thursday as the storm punishes the densely populated U.S. Northeast.

The storm is the product of a rapid and rare sharp drop in barometric pressure known as bombogenesis, or bomb cyclone. Heavy snow pounded the East Coast along a front stretching from Maine as far south as North Carolina early on Thursday, taking out power lines, icing over roadways and closing hundreds of schools.

Prices for heating oil and natural gas in the U.S. Northeast hit their highest levels in years on the back of near-record heating demand. Benchmark U.S. heating oil futures are near their highest in almost three years.

U.S. natural gas demand was expected to remain near record highs this week. Natural gas is the major fuel for residential and commercial heating in the U.S. Northeast and is also widely used by power plants.

On Wednesday, natural gas futures fell 1.6 percent to $3.008 per million British thermal units, but cash prices in New York and New England remain elevated.

"NYMEX Henry Hub prices should rise further to the mid-$3 range, as cash Henry Hub prices already traded above $6. But the market, due to the supposed record-breaking production growth in 2018, still seems to be under-appreciating the potential for cold weather persisting," Citi

AMERICAN OVERSIGHT

analysts said in a note.

New England's cash prices soared last week, and remain near four-year highs at $36.32 per mmBtu. ISO-New England, that region's power grid operator, said on Thursday that its power operators were relying more heavily on generators that burn heating oil, due to heavy natural gas demand from homes and businesses.

"We expect to have sufficient capacity and fuel available and expect to be able to weather the storm without running up against significant emissions limits, but concerns remain the same regarding fuel availability and emissions limits throughout this protracted cold spell and the rest of the winter," the company said in a statement.

There are fears that a significant disruption could lead to a heating oil shortage, as distillate inventories, including heating oil, in the New England and Mid-Atlantic regions are currently at their lowest levels for this time of year since 2015.

This has spurred tankers carrying diesel and heating oil to set out from Europe bound for the United States to address supply worries, reversing a traditional trade route.

Icebreakers have been used in key ports of Boston, New York and Philadelphia to keep shipping lanes clear, though delays are expected, and the Coast Guard said late Wednesday that those ships will remain at shore until the storm passes.

Reliance on heating oil is highest in the Northeast region, with about 21 percent of households using oil for space heating.

So far, most northern U.S. refiners are not reporting problems. Phillips 66 shut a crude and coking unit at its Wood River, Illinois, refinery after a line froze followed by a brief fire, a source told Reuters on Wednesday. It did not currently have a timeline for restarting the units at the Illinois plant, the source said.

Philadelphia Energy Solutions postponed planned work at its 335,000 refinery complex in Philadelphia until after the storm.

Valero's 125,000 bpd refinery in Meraux, Louisiana, restarted most operations after sub-freezing conditions froze instruments earlier this week, according to a report by Energy News Today (ENT).

Valero was forced to cut rates at its Port Arthur, Texas, refinery due to the cold weather, ENT reported, and operations are expected to return to normal by the end of the week.

AMERICAN OVERSIGHT

Major Chip Flaws Affect Billions of Devices

By Selena Larson, 1/4/18

Two major flaws in computer chips could leave a huge number of computers and smartphones vulnerable to security concerns, researchers revealed Wednesday.

And a U.S. government-backed body warned that the chips themselves need to be replaced to completely fix the problems.

The flaws could allow an attacker to read sensitive data stored in the memory, like passwords, or look at what tabs someone has open on their computer, researchers found. Daniel Gruss, a researcher from Graz University of Technology who helped identify the flaw, said it may be difficult to execute an attack, but billions of devices were impacted.

Called Meltdown and Spectre, the flaws exist in processors, a building block of computers that acts as the brain. Modern processors are designed to perform something called "speculative execution." That means they predict what tasks they will be asked to execute and rapidly access multiple areas of memory at the same time.

That data is supposed to be protected and isolated, but researchers discovered that in some cases, the information can be exposed while the processor queues it up.

Researchers say almost every computing system -- desktops, laptops, smartphones, and cloud servers -- is affected by the Spectre bug. Meltdown appears to be specific to Intel (INTC) chips.

"More specifically, all modern processors capable of keeping many instructions in flight are potentially vulnerable. In particular, we have verified Spectre on Intel, AMD, and ARM processors," the researchers said.

Government agencies issued statements warning users about the vulnerabilities.

The U.S. Computer Emergency Readiness Team said that while the flaws "could allow an attacker to obtain access to sensitive information," it's not so far aware of anyone doing so.

The agency urged people to read a detailed statement on the vulnerabilities by the Software Engineering Institute, a U.S.-government funded body that researches cybersecurity problems.

The institute said that "fully removing the vulnerability requires replacing vulnerable [processor] hardware."

It later changed its guidance on Thursday to suggest updating software was enough. The institute didn't say why it had made the change and didn't immediately respond to a request for further

AMERICAN OVERSIGHT

information.

It said the problems affect technology giants including Apple, Google and Microsoft.

The U.S. Computer Emergency Readiness Team recommended that users read advice posted online by Microsoft and software company Mozilla.

The U.K.'s National Cyber Security Center advised organizations and individuals to "continue to protect their systems from threats by installing patches as soon as they become available."

Google (GOOGL) programmer Jann Horn of Project Zero was one of the researchers who discovered the flaws. In a blog post, he said his group alerted chipmakers to the issues in June. Since last fall, security researchers and companies have investigated and updated software systems to address the flaws.

ntel chips are found in everything from personal computers to medical equipment. The company's shares were down 3% on Wednesday.

The company said in a press release that "many types of computing devices — with many different vendors' processors and operating systems — are susceptible to these exploits."

Intel said it is working with other chipmakers, including AMD and ARM Holdings, to solve the issue. ARM said in a statement a small subset of its processors are susceptible to the flaws. AMD said in a statement there is a "near zero risk of exploitation" for one of the security issues, due to architecture differences.

A fix requires both the chip manufacturers and software makers to update their products before pushing it out.

Estimates posted on Linux message boards suggested computer performance could slow down between 5% and 30% once patched, however Intel said users will not see significant performance changes.

Tech website The Register was first to report the processor flaws on Tuesday.

A spokesperson for Microsoft (MSFT) told CNNMoney the company is aware of the issue and is in the process of deploying mitigations to cloud services and has released security updates to protect Windows users.

Google's Cloud Platform has been updated to prevent the vulnerabilities, the company said.

Amazon (AMZN) said in a statement most of its cloud computing machines affected by the flaw are already protected, but it was updating the rest on Wednesday.

Apple (AAPL) revealed Thursday that all its Mac and iOS devices were affected by the flaws, but said that "there are no known exploits impacting customers at this time." The company has

AMERICAN OVERSIGHT

already released some fixes for Meltdown, and will release others for Spectre in subsequent updates.

It's important for all users to update their devices when new updates are released.

Flaws in chips are unusual. Back in 1994, a major error in Intel's Pentium processor caused computers to incorrectly calculate results.

Associated Press

https://www.usnews.com/news/best-states/oklahoma/articles/2018-01-04/oklahoma-utility-regulators-consider-request-for-rate-cut

Judges Recommend Rebates for Utility Corporate Tax Savings

By Tim Talley, 1/4/18

Administrative law judges recommended Thursday that five Oklahoma utilities use any savings they receive from new federal corporate tax rates to issue rebates totaling as much as $100 million to their customers, a deputy state attorney general said.

The rulings were handed down following legal arguments before administrative law judges appointed by the Oklahoma Corporation Commission to hear Attorney General Mike Hunter's request that consumer rates be reduced to reflect lower tax rates that went into effect on Monday.

The new law lowers the highest corporate income tax rate from 35 percent to 21 percent, and Hunter's office has estimated that customer savings could be $100 million a year not including any savings from the utilities' excess accumulated deferred income tax accounts, Deputy Attorney General Dara Derryberry said. The accounts are used to reflect utility companies' past use of tax breaks to defer tax bills.

The five utilities affected by the recommendations are Oklahoma Gas & Electric, Public Service Company of Oklahoma, Oklahoma Natural Gas, CenterPoint Energy and Arkansas Oklahoma Gas.

The judges recommended that the three-member commission, which regulates public utilities in the state, grant Hunter's request that each of the five utilities make any income tax savings they receive from the new law subject to ratepayer rebates, Derryberry said.

The judges instructed the commission's staff to prepare proposed orders by Friday and the commission could consider whether to grant the rebate orders as early as Monday, she said.

AMERICAN OVERSIGHT

"The attorney general is urging swift action by the commission," Derryberry said.

Utility officials have said they were already working with the commission on possible rate changes and shared Hunter's goal to keep rates affordable. OG&E spokesman Brian Alford has said the utility is still trying to determine the impact of the tax bill and will conduct its own rate review regardless of what the commission decides.

Hunter's office has estimated that OG&E's corporate tax savings from the new law will be $51.7 million a year, more than the other four utilities combined.

Hunter's office asked the commission to pass the savings onto consumers last month after President Donald Trump signed the sweeping overhaul of federal tax law.

"These companies will begin seeing major savings after the tax cut is implemented," Hunter said at the time. "Oklahomans who are customers of these companies should immediately retain the benefits."

The Oklahoman

http://newsok.com/why-now-is-the-time-to-see-sooner-sensation-trae-young/article/5578401

Why Now is the Time to See Sooner Sensation Trae Young

By Jenni Carlson, 1/5/18

Trae Young dribbled down the court heading directly toward an Oklahoma State defender, and you wondered what he was doing.

But as soon as the Sooner phenom reached the unsuspecting Cowboy on Wednesday night, he crossed over his dribble, right to left. In a flash, he was in the open, and you wondered how he did that.

The crowd inside the Lloyd Noble Center started oohing and aahing long before Young put the ball through the basket.

It was fun for anyone watching.

It was even better in person.

During a week in which we rang in the new year and the Big 12 heralded the start of conference play, there were reminders a plenty that the clock is ticking. Only a couple months of the regular season remain. Three months from now, we'll stand on the precipice of the national

AMERICAN OVERSIGHT

championship game.

The clock may be ticking, too, on Trae Young.

Talk around town when the point guard committed and signed with Oklahoma out of Norman North was that he planned to spend a couple years in college before leaving for the NBA. The probable thinking was that his first season would be an adjustment, physically and mentality, and that with experience, development and some more time in the weight room, his skills would really start to shine during his second season.

That timeline has been accelerated.

As a freshman — and a freshman point guard at that — Young is authoring one of the most dazzling and dominating seasons that college basketball has seen in quite some time.

After OU's Bedlam win Wednesday night, he is averaging 29.4 points and 10.6 assists a game. He leads the country in both categories, something that has never been done before.

Ever.

Not by a freshman. Not by anyone.

Ever.

The website The Ringer compiled a chart of the seven point guards who have won the Wooden Award, which has been given annually to college basketball's best player since its inception in 1977. Comparing Young's numbers to theirs — remember, these are some of the best to ever play college ball — he would rank first in scoring and assists, second in 3-point percentage and third in field goal percentage.

His numbers may well sag during Big 12 play, but what if they don't?

OU opened conference play with TCU and OSU, and both squads are stout defensively. The Frogs and the Cowboys got physical with Young, who had seven turnovers against TCU and six against OSU. Way more than he wanted.

And still, he averaged 33.0 points and 12.0 assists in those two wins.

“The thing about it, he's so consistent at such a high level,” Sooner coach Lon Kruger said. “It's not consistent average. He's consistent exceptional.”

But for all the eye-popping numbers, it's the way Young plays that is most amazing. If you've never been to watch him in person, go. See. Witness. You'll be glad you did.

I actually wrote those last few sentences a year ago during Young's sensational senior year at Norman North. We headlined it, “THE TRAE YOUNG EXPERIENCE: Why you need to go see

AMERICAN OVERSIGHT

the Norman North point guard before his high school days are done."

At that point, we didn't know where Young would play in college. OU and OSU were among his finalists, but so were Kansas and Texas Tech, Kentucky and Washington. He could've been playing Wednesday night in Rupp Arena instead of Lloyd Noble, and it would've been a lot harder to see him in person.

But since Young picked the Sooners, The Experience stayed in state.

But I'll say now what I said a year ago — don't wait to go see him.

I have to admit that I don't quite understand how Young does what he does. He isn't an athletic marvel.

A year ago when I wrote about him, I termed him "slight and thin."

That hasn't changed.

I stood by him the other day during a post-practice interview scrum, and I'm pretty sure I could get my hands around his biceps, index finger to index finger and thumb to thumb. And I don't have particularly large mitts.

Young shows signs of time spent in the weight room, but strength isn't his superpower. Neither is speed. Or ups. He has all those skills and many more, but what makes him a superstar is his fearlessness. He isn't afraid to use his range or his handles even when the defense or the conventional wisdom says otherwise.

Pull up from 35 feet and shoot with a hand in his face? Sure.

Bounce a pass through a defender's legs? OK.

Turn college basketball on its head?

Why not?

The packed seats Wednesday night at the Lloyd Noble Center — and the already announced sellouts of the TCU and Kansas games later this month — are evidence that people are making an effort to see Young. But I'm imploring you to join them.

You won't regret it.

EPA Sets Hard Deadline for Enforcing Obama-era Ozone Restrictions

By John Siciliano, 1/4/18

The Environmental Protection Agency has set a hard spring deadline for listing regions of the country that cannot meet the Obama administration's strict rules for smog-forming ozone emissions.

The EPA plans to complete designations for all of the non-compliant areas no later than April 30, the agency announced in the Federal Register Thursday.

The Trump EPA had tried to delay formally designating the regions as non-attainment zones, which would force some cities and other areas to establish special pollution control plans that critics of the rule have argued would deter development and economic growth.

A court blocked EPA Administrator Scott Pruitt's delay strategy and directed the agency to enforce the regulations. Since the court order, environmentalists have held the agency to meeting deadlines for designating the non-attainment regions, which is a key part of implementing the regulations.

EPA has missed the deadlines, saying it needs more time to collect data from states.

Thursday's notice ends that data collection period.

In November, the EPA said 2,646 counties, including Indian country in those counties, are meeting the ozone standards, and listed three other counties as unclassifiable. Thursday's notice means the EPA intends to designate all of the remaining areas as non-attainment regions.

In a separate action, EPA also proposes taking a large area that includes Missouri, including St. Louis, and Illinois off the non-attainment list for related rules for controlling soot pollution.

The action is meant to get feedback from stakeholders on the EPA's proposed plan to designate the large bi-state area as meeting the rules based on new pollution data from 2017.

"EPA expects to approve the area's re-designation," the agency said. The proposal becomes effective Friday.

St. Helens Approves Contract for Brownfield Site Study

By Nicole Thill, 1/5/18

City Council votes to approve contract with Maul Foster Alongi to oversee grant-funded program

AMERICAN OVERSIGHT

EXT-18-783-F-003127

ED_001863D_00000198-00002

St. Helens will continue its working relationship with a Portland-based consulting company to conduct site studies of potential brownfields in the city.

The St. Helens City Council voted Wednesday, Jan. 3, to approve a contract with Maul Foster Alongi, placing the environmental engineering and consulting company in charge of project management for brownfield site identification.

In May the city received $300,000 in grant funding from the Environmental Protection Agency to conduct brownfield assessments throughout the city. Brownfields are site that have been contaminated by potentially hazardous substances or pollutants left behind by previous development on the land.

The city approved a work plan in July that outlined the project scope to perform the brownfield assessments. The main purpose of the EPA-funded project will be to identify key areas that are limited in their ability to be redeveloped due to a brownfield designation. The goal will be to conduct six environmental site assessments in phase one, six assessments in phase two, convene a brownfield advisory committee and host two public meetings to determine site prioritization and reuse planning.

Approval of the plan was the first step, however, and the city recently put out a request for proposals to seek an applicant to oversee implementation of the plan. The city issued a request for qualifications in November and recently reviewed the applications it received.

City Administrator John Walsh explained that brownfield site identification is a specialized field, and the city received only three proposals from companies interested in taking on the project management role.

The city has worked with Maul Foster Alongi on previous projects, including the development of the waterfront framework plan that outlines development possibilities for waterfront land the city owns.

Monsanto Wins Support from 11 US States in California Cancer Dispute

By Tom Polansek, 1/3/18

Monsanto Co has won support from eleven U.S. states in its attempt to stop California from requiring cancer warnings on products containing glyphosate, ratcheting up a legal fight over the company's popular weed killer.
Missouri, home to Monsanto's headquarters, along with other farm states including Iowa and Indiana, said in court documents on Tuesday that the warnings would be misleading because there is no definite link between glyphosate and cancer.

Midwest businesses would need to include warnings on glyphosate products if California requires them or stop selling such goods because they may end up in the Golden State, according to the states' filing.

California added glyphosate, the main ingredient in Monsanto's Roundup herbicide, to its list of cancer-causing chemicals in July 2017 and will require products containing the chemical to carry warnings by July 2018.

The state acted after the World Health Organization's International Agency for Research on Cancer concluded in 2015 that glyphosate was "probably carcinogenic."

"The mandate imposes confusing and potentially inconsistent obligations on non-resident businesses, creating a strong incentive to abandon glyphosate markets altogether," the states' filing said.

For more than 40 years, farmers have applied glyphosate to crops, most recently on soybeans that Monsanto genetically engineered to resist the herbicide. Roundup is also sprayed on residential lawns and golf courses.

AMERICAN OVERSIGHT

EXT-18-783-F-003128

ED_001863D_00000198-00003

The controversy in California is a headache for the company as it faces a crisis around another herbicide based on a chemical known as dicamba that has been linked to U.S. crop damage.

Monsanto, which is being acquired by Bayer AG for $63.5 billion, developed the dicamba-based product following an increase in weeds resistant to glyphosate.

The 11 states are supporting a federal lawsuit Monsanto, the National Association of Wheat Growers and other agricultural groups filed in November to stop the state from requiring glyphosate warnings.

Monsanto said Wednesday it had discussed California's mandate with officials in agricultural states as it proceeded with the lawsuit.

California's Office of Environmental Health Hazard Assessment (OEHHA), which is named in the lawsuit, declined to comment. The office previously said it stands by the decision to include glyphosate on the state's list of products known to cause cancer, as required under a rule known as Proposition 65.

"Proposition 65 is 30 years old and for every one of those years there have been strenuous attempts to kill it on the ground that it's different from other states," said David Roe, the rule's primary author.

"They've always failed."

Justices to Discuss Energy Cases Today

By Kelsey Tamborrino, 1/5/18

The Supreme Court meets privately today for their regular conference with several high-profile energy-related cases on its list. It's not clear whether any of these cases will pique the justices' interest, so we'll keep an eye on Monday morning's release of orders from today's conference. Here's a brief rundown of the energy cases by topic.

EPA coal jobs study: Murray Energy is appealing the 4th Circuit ruling from last year that said EPA was not legally obligated under the Clean Air Act to produce a study specifically considering coal industry job losses caused by its regulations. The Trump administration opposes requiring EPA to produce the study Murray wants and has urged the Supreme Court not to take the case. But EPA Administrator Scott Pruitt said in October that his agency will give greater consideration to coal jobs via some type of study in the future. The case is 17-478, Murray v. Pruitt.

NAAQS implementation: The 9th Circuit ruled in 2016 that EPA wrongly approved part of Arizona's particulate matter clean-up plan that counted already completed actions — such as paving dirt roads — as required "contingency measures" meant to help Maricopa County meet the standard. Arizona argues that similar approvals have happened dozens of times in recent decades, and that the 5th Circuit ruled previously in favor of that scheme. The Trump administration urged the Supreme Court not to get involved, saying the circuit split "does not create any unmanageable practical difficulties." The case is 16-1369, Arizona v. Bahr.

Dow Industrials Cross 25,000 for First Time

By Corrie Driebusch, Michael Wursthorn and Georgi Kantchev, 1/5/18

The Dow Jones Industrial Average jumped past 25000 for the first time Thursday, the index's fastest run to a fresh 1,000-point milestonein history.

AMERICAN OVERSIGHT

The S&P 500's long-running rally also reached a new landmark Thursday, becoming the greatest bull market in the postwar era. The broad index has more than quadrupled since the bull market began in March 2009, surpassing the tech-fueled rally of the 1990s, according to the research firm Leuthold Group, which excluded dividends from its calculations. The Dow has risen 283% over that same period, according to the WSJ Market Data Group.

Thursday's moves marked the latest feats for a rally that has repeatedly wrong-footed skeptics and sent stock indexes around the world to multiyear highs. The Dow industrials hit five thousand-point milestones last year, the most such records in its 120 years.

Faster economic growth around the globe and improving sentiment from consumers and businesses have helped power this rally in recent weeks. Economic data in the first days of the new year continued to suggest steady expansion in the U.S., China and Europe.

"The turn of the calendar year doesn't change the dynamics of economic growth and earnings growth," said Kate Warne, investment strategist at retail brokerage Edward Jones. "We shouldn't be surprised that markets continue to move higher because fundamentals continue to be positive and investor optimism is actually improving rather than investors becoming more cautious."

The Dow industrials, which heavily weights industrial giants such as Boeing and Caterpillar, gained 152.45 points, or 0.6%, to 25075.13. It took the Dow industrials 23 trading days to reach 25000 from 24000, ahead of the 24-day spans that carried the index to 11000 in 1999 and 21000 in March.

The S&P 500 climbed 10.93 points, or 0.4%, to 2723.99, while the Nasdaq Composite added 12.38 points, or 0.2%, to 7077.91. Each major index closed at fresh records.

Shares of financial firms led markets higher Thursday as a strong private jobs report raised investors' expectations for further interest-rate increases.

Businesses across the country added 250,000 workers in December, according to payroll processor Automatic Data Processing Inc. and forecasting firm Moody's Analytics, topping economists' expectations. The U.S. Bureau of Labor Statistics will release its monthly jobs report on Friday.

Goldman Sachs Group gained $3.54, or 1.4%, to $256.83, contributing about 24 points to the Dow's gain. American Express Co. added 1.65, or 1.7%, to 100.85, while JPMorgan Chase & Co. rose 1.54, or 1.4%, to 109.04.

"Financials had been out of favor for some time, but they've been benefiting from this [tax] stimulus," said Jeff Zipper, a portfolio manager and managing director at U.S. Bank's Private Client Reserve.

He added the firm has been increasing clients' exposure to financial stocks as Republicans passed their tax overhaul, and on expectations that the gap between the two-year and 10-year Treasury note yields will increase after nearing its narrowest level in a decade last month. A wider gap between short- and long-term interest rates tends to boost lenders' profits.

The Dow industrials rose 25% in 2017 as investors bet on solid corporate earnings and a pickup in global economic growth. Analysts and investors say sectors like financials and energy are poised to play a bigger role in pushing markets higher. Recently, the price of oil has risen above $60 a barrel, providing a boost to many of the oil-and-gas companies that languished much of last year.

Shares of Chevron surged in the second half of 2017. The oil producer's stock has risen 21% in the last six months, roughly double its gain for all of last year. Exxon Mobil has climbed nearly 6% over that same period despite finishing last year lower.

AMERICAN OVERSIGHT

"The risk sentiment is absolutely roaring right now," said Richard Benson, co-head of portfolio investments at Millennium Global Investments. "As an investor, it's easy to develop a fear of missing out."

While some investors are excited by the swift pace at which the Dow climbed the latest 1,000 points, many analysts are quick to note that as the blue-chip index rises, the percentage move required to leap to a new milestone becomes significantly easier. For instance, the move to 11000 from 10000 required a gain of 10%, while the rise from to 25000 from 24000 needed a 4.2% increase.

The market's steady climb continues to worry some money managers who question whether stock valuations have become stretched, even as earnings for S&P 500 companies this year are projected to grow at their best rate in seven years. A recent jump in investor exuberance has also put some analysts and investors on edge.

"If investor optimism gets excessive, and I think it's close to being excessive, I wouldn't be surprised to see" a pullback in the market, said Bruce Bittles, chief investment strategist at Baird.

Reuters

https://www.cnbc.com/2018/01/04/bomb-cyclone-hits-us-east-coast-energy-power-supply.html

'Bomb Cyclone' Hits US East Coast Energy, Power Supply

By Scott DiSavino, Devika Krishna Kumar, 1/4/18

An intense winter storm froze pipes and disrupted services at refineries on the U.S. Atlantic coast on Thursday, sending fuel prices higher as heavy snowfall and high winds caused electricity outages for tens of thousands of Americans.

Some 65,000 homes and businesses along the U.S. East Coast are without power, and that number is expected to swell on Thursday as the storm punishes the densely populated U.S. Northeast.

The storm is the product of a rapid and rare sharp drop in barometric pressure known as bombogenesis, or bomb cyclone. Heavy snow pounded the East Coast along a front stretching from Maine as far south as North Carolina early on Thursday, taking out power lines, icing over roadways and closing hundreds of schools.

Prices for heating oil and natural gas in the U.S. Northeast hit their highest levels in years on the back of near-record heating demand. Benchmark U.S. heating oil futures are near their highest in almost three years.

U.S. natural gas demand was expected to remain near record highs this week. Natural gas is the major fuel for residential and commercial heating in the U.S. Northeast and is also widely used by power plants.

On Wednesday, natural gas futures fell 1.6 percent to $3.008 per million British thermal units, but cash prices in New York and New England remain elevated.

"NYMEX Henry Hub prices should rise further to the mid-$3 range, as cash Henry Hub prices already traded above $6. But the market, due to the supposed record-breaking production growth in 2018, still seems to be under-appreciating the potential for cold weather persisting," Citi analysts said in a note.

New England's cash prices soared last week, and remain near four-year highs at $36.32 per mmBtu. ISO-New England, that region's power grid operator, said on Thursday that its power operators were relying more heavily on generators that burn heating oil, due to heavy natural gas demand from homes and businesses.

"We expect to have sufficient capacity and fuel available and expect to be able to weather the storm without running up against significant emissions limits, but concerns remain the same regarding fuel availability and emissions limits throughout this protracted cold spell and the rest of the winter," the company said in a statement.

There are fears that a significant disruption could lead to a heating oil shortage, as distillate inventories, including

AMERICAN OVERSIGHT

heating oil, in the New England and Mid-Atlantic regions are currently at their lowest levels for this time of year since 2015.

This has spurred tankers carrying diesel and heating oil to set out from Europe bound for the United States to address supply worries, reversing a traditional trade route.

Icebreakers have been used in key ports of Boston, New York and Philadelphia to keep shipping lanes clear, though delays are expected, and the Coast Guard said late Wednesday that those ships will remain at shore until the storm passes.

Reliance on heating oil is highest in the Northeast region, with about 21 percent of households using oil for space heating.

So far, most northern U.S. refiners are not reporting problems. Phillips 66 shut a crude and coking unit at its Wood River, Illinois, refinery after a line froze followed by a brief fire, a source told Reuters on Wednesday. It did not currently have a timeline for restarting the units at the Illinois plant, the source said.

Philadelphia Energy Solutions postponed planned work at its 335,000 refinery complex in Philadelphia until after the storm.

Valero's 125,000 bpd refinery in Meraux, Louisiana, restarted most operations after sub-freezing conditions froze instruments earlier this week, according to a report by Energy News Today (ENT).

Valero was forced to cut rates at its Port Arthur, Texas, refinery due to the cold weather, ENT reported, and operations are expected to return to normal by the end of the week.

http://money.cnn.com/2018/01/03/technology/computer-chip-flaw-security/index.html

Major Chip Flaws Affect Billions of Devices

By Selena Larson, 1/4/18

Two major flaws in computer chips could leave a huge number of computers and smartphones vulnerable to security concerns, researchers revealed Wednesday.

And a U.S. government-backed body warned that the chips themselves need to be replaced to completely fix the problems.

The flaws could allow an attacker to read sensitive data stored in the memory, like passwords, or look at what tabs someone has open on their computer, researchers found. Daniel Gruss, a researcher from Graz University of Technology who helped identify the flaw, said it may be difficult to execute an attack, but billions of devices were impacted.

Called Meltdown and Spectre, the flaws exist in processors, a building block of computers that acts as the brain. Modern processors are designed to perform something called "speculative execution." That means they predict what tasks they will be asked to execute and rapidly access multiple areas of memory at the same time.

That data is supposed to be protected and isolated, but researchers discovered that in some cases, the information can be exposed while the processor queues it up.

Researchers say almost every computing system -- desktops, laptops, smartphones, and cloud servers -- is affected by the Spectre bug. Meltdown appears to be specific to Intel (INTC) chips.

"More specifically, all modern processors capable of keeping many instructions in flight are potentially vulnerable. In

AMERICAN OVERSIGHT

particular, we have verified Spectre on Intel, AMD, and ARM processors," the researchers said.

Government agencies issued statements warning users about the vulnerabilities.

The U.S. Computer Emergency Readiness Team said that while the flaws "could allow an attacker to obtain access to sensitive information," it's not so far aware of anyone doing so.

The agency urged people to read a detailed statement on the vulnerabilities by the Software Engineering Institute, a U.S.-government funded body that researches cybersecurity problems.

The institute said that "fully removing the vulnerability requires replacing vulnerable [processor] hardware."

It later changed its guidance on Thursday to suggest updating software was enough. The institute didn't say why it had made the change and didn't immediately respond to a request for further information.

It said the problems affect technology giants including Apple, Google and Microsoft.

The U.S. Computer Emergency Readiness Team recommended that users read advice posted online by Microsoft and software company Mozilla.

The U.K.'s National Cyber Security Center advised organizations and individuals to "continue to protect their systems from threats by installing patches as soon as they become available."

Google (GOOGL) programmer Jann Horn of Project Zero was one of the researchers who discovered the flaws. In a blog post, he said his group alerted chipmakers to the issues in June. Since last fall, security researchers and companies have investigated and updated software systems to address the flaws.

ntel chips are found in everything from personal computers to medical equipment. The company's shares were down 3% on Wednesday.

The company said in a press release that "many types of computing devices — with many different vendors' processors and operating systems — are susceptible to these exploits."

Intel said it is working with other chipmakers, including AMD and ARM Holdings, to solve the issue. ARM said in a statement a small subset of its processors are susceptible to the flaws. AMD said in a statement there is a "near zero risk of exploitation" for one of the security issues, due to architecture differences.

A fix requires both the chip manufacturers and software makers to update their products before pushing it out.

Estimates posted on Linux message boards suggested computer performance could slow down between 5% and 30% once patched, however Intel said users will not see significant performance changes.

Tech website The Register was first to report the processor flaws on Tuesday.

A spokesperson for Microsoft (MSFT) told CNNMoney the company is aware of the issue and is in the process of deploying mitigations to cloud services and has released security updates to protect Windows users.

Google's Cloud Platform has been updated to prevent the vulnerabilities, the company said.

Amazon (AMZN) said in a statement most of its cloud computing machines affected by the flaw are already protected, but it was updating the rest on Wednesday.

Apple (AAPL) revealed Thursday that all its Mac and iOS devices were affected by the flaws, but said that "there are no

AMERICAN OVERSIGHT

EXT-18-783-F-003133

ED_001863D_00000198-00008

known exploits impacting customers at this time." The company has already released some fixes for Meltdown, and will release others for Spectre in subsequent updates.

It's important for all users to update their devices when new updates are released.

Flaws in chips are unusual. Back in 1994, a major error in Intel's Pentium processor caused computers to incorrectly calculate results.

Associated Press

https://www.usnews.com/news/best-states/oklahoma/articles/2018-01-04/oklahoma-utility-regulators-consider-request-for-rate-cut

Judges Recommend Rebates for Utility Corporate Tax Savings

By Tim Talley, 1/4/18

Administrative law judges recommended Thursday that five Oklahoma utilities use any savings they receive from new federal corporate tax rates to issue rebates totaling as much as $100 million to their customers, a deputy state attorney general said.

The rulings were handed down following legal arguments before administrative law judges appointed by the Oklahoma Corporation Commission to hear Attorney General Mike Hunter's request that consumer rates be reduced to reflect lower tax rates that went into effect on Monday.

The new law lowers the highest corporate income tax rate from 35 percent to 21 percent, and Hunter's office has estimated that customer savings could be $100 million a year not including any savings from the utilities' excess accumulated deferred income tax accounts, Deputy Attorney General Dara Derryberry said. The accounts are used to reflect utility companies' past use of tax breaks to defer tax bills.

The five utilities affected by the recommendations are Oklahoma Gas & Electric, Public Service Company of Oklahoma, Oklahoma Natural Gas, CenterPoint Energy and ArkansasOklahoma Gas.

The judges recommended that the three-member commission, which regulates public utilities in the state, grant Hunter's request that each of the five utilities make any income tax savings they receive from the new law subject to ratepayer rebates, Derryberry said.

The judges instructed the commission's staff to prepare proposed orders by Friday and the commission could consider whether to grant the rebate orders as early as Monday, she said.

"The attorney general is urging swift action by the commission," Derryberry said.

Utility officials have said they were already working with the commission on possible rate changes and shared Hunter's goal to keep rates affordable. OG&E spokesman Brian Alford has said the utility is still trying to determine the impact of the tax bill and will conduct its own rate review regardless of what the commission decides.

Hunter's office has estimated that OG&E's corporate tax savings from the new law will be $51.7 million a year, more than the other four utilities combined.

Hunter's office asked the commission to pass the savings onto consumers last month after President Donald Trump signed the sweeping overhaul of federal tax law.

"These companies will begin seeing major savings after the tax cut is implemented," Hunter said at the time. "Oklahomans who are customers of these companies should immediately retain the benefits."

http://newsok.com/why-now-is-the-time-to-see-sooner-sensation-trae-young/article/5578401

Why Now is the Time to See Sooner Sensation Trae Young

By Jenni Carlson, 1/5/18

Trae Young dribbled down the court heading directly toward an Oklahoma State defender, and you wondered what he was doing.

But as soon as the Sooner phenom reached the unsuspecting Cowboy on Wednesday night, he crossed over his dribble, right to left. In a flash, he was in the open, and you wondered how he did that.

The crowd inside the Lloyd Noble Center started oohing and aahing long before Young put the ball through the basket.

It was fun for anyone watching.

It was even better in person.

During a week in which we rang in the new year and the Big 12 heralded the start of conference play, there were reminders a plenty that the clock is ticking. Only a couple months of the regular season remain. Three months from now, we'll stand on the precipice of the national championship game.

The clock may be ticking, too, on Trae Young.

Talk around town when the point guard committed and signed with Oklahoma out of Norman North was that he planned to spend a couple years in college before leaving for the NBA. The probable thinking was that his first season would be an adjustment, physically and mentality, and that with experience, development and some more time in the weight room, his skills would really start to shine during his second season.

That timeline has been accelerated.

As a freshman — and a freshman point guard at that — Young is authoring one of the most dazzling and dominating seasons that college basketball has seen in quite some time.

After OU's Bedlam win Wednesday night, he is averaging 29.4 points and 10.6 assists a game. He leads the country in both categories, something that has never been done before.

Ever.

Not by a freshman. Not by anyone.

Ever.

The website The Ringer compiled a chart of the seven point guards who have won the Wooden Award, which has been given annually to college basketball's best player since its inception in 1977. Comparing Young's numbers to theirs — remember, these are some of the best to ever play college ball — he would rank first in scoring and assists, second in 3-point percentage and third in field goal percentage.

His numbers may well sag during Big 12 play, but what if they don't?

OU opened conference play with TCU and OSU, and both squads are stout defensively. The Frogs and the Cowboys got physical with Young, who had seven turnovers against TCU and six against OSU. Way more than he wanted.

And still, he averaged 33.0 points and 12.0 assists in those two wins.

AMERICAN OVERSIGHT

“The thing about it, he's so consistent at such a high level,” Sooner coach Lon Kruger said. “It's not consistent average. He's consistent exceptional.”

But for all the eye-popping numbers, it's the way Young plays that is most amazing. If you've never been to watch him in person, go. See. Witness. You'll be glad you did.

I actually wrote those last few sentences a year ago during Young's sensational senior year at Norman North. We headlined it, “THE TRAE YOUNG EXPERIENCE: Why you need to go see the Norman North point guard before his high school days are done.”

At that point, we didn't know where Young would play in college. OU and OSU were among his finalists, but so were Kansas and Texas Tech, Kentucky and Washington. He could've been playing Wednesday night in Rupp Arena instead of Lloyd Noble, and it would've been a lot harder to see him in person.

But since Young picked the Sooners, The Experience stayed in state.

But I'll say now what I said a year ago — don't wait to go see him.

I have to admit that I don't quite understand how Young does what he does. He isn't an athletic marvel.

A year ago when I wrote about him, I termed him “slight and thin.”

That hasn't changed.

I stood by him the other day during a post-practice interview scrum, and I'm pretty sure I could get my hands around his biceps, index finger to index finger and thumb to thumb. And I don't have particularly large mitts.

Young shows signs of time spent in the weight room, but strength isn't his superpower. Neither is speed. Or ups. He has all those skills and many more, but what makes him a superstar is his fearlessness. He isn't afraid to use his range or his handles even when the defense or the conventional wisdom says otherwise.

Pull up from 35 feet and shoot with a hand in his face? Sure.

Bounce a pass through a defender's legs? OK.

Turn college basketball on its head?

Why not?

The packed seats Wednesday night at the Lloyd Noble Center — and the already announced sellouts of the TCU and Kansas games later this month — are evidence that people are making an effort to see Young. But I'm imploring you to join them.

You won't regret it.

AMERICAN OVERSIGHT

To: Bennett, Tate[Bennett.Tate@epa.gov]
From: POLITICO Pro Energy
Sent: Thur 6/28/2018 9:44:23 AM
Subject: Morning Energy, presented by ExxonMobil: Musical chairs: SCOTUS edition — Gas industry against 'transition fuel' description — Perry's back

By Kelsey Tamborrino | 06/28/2018 05:42 AM EDT

With help from Alex Guillén, Annie Snider, Eric Wolff, Anthony Adragna and Emily Holden

MUSICAL CHAIRS, SCOTUS EDITION: Supreme Court Justice Anthony Kennedy announced his retirement Wednesday — setting the stage for President Donald Trump to install a pick that will likely shift the court to the right for a generation to come. Talk of who will replace Kennedy kicked off about 1.4 seconds after he announced his retirement. The president said he will pick from his list of contenders from last year (so say goodbye to the idea of Justice Scott Pruitt). It's early, but here are a few names ME is keeping an eye on:

— **Brett Kavanaugh**, 53, judge on the D.C. Circuit Court of Appeals since 2006. Kavanaugh — already reportedly a front-runner — has been on Republican SCOTUS short lists since he joined the D.C. Circuit 12 years ago. Thanks to his seat there, Kavanaugh has had his fingers in numerous environmental cases over the years, and is widely seen as critical of many Obama-era EPA rules. (In a tweet , E&E News' Robin Bravender pointed out Kavanaugh's conservative credentials. "A source told me a few years back: 'I would think him a judge that is more open to second-guessing the EPA than nearly anyone.'")

— **Patrick Wyrick**, 37, Oklahoma Supreme Court justice, nominee to the U.S. District Court for the Western District of Oklahoma. Aside from his youth, Wyrick's other claim to fame is a close connection to EPA chief Pruitt. Wyrick's nomination to a federal district court cleared committee earlier this month on a party-line vote, but he drew fire from liberal groups such as the Alliance for Justice and the League of Conservation Voters for his work as Oklahoma's solicitor general while Pruitt was fighting federal regulations as attorney general. Pruitt previously called him "a superb lawyer" and "a dear friend and trusted counselor."

— **Sen. Mike Lee** (R-Utah), 47. Lee chairs the Energy and Natural Resources Subcommittee on Public Lands, Forests and Mining and the Republican Steering Committee. A former clerk for Samuel Alito when he was on the 3rd Circuit Court of Appeals, Lee in recent years made headlines for holding up federal aid to Flint, Mich., saying the state should pay for its lead crisis. Lee also praised the president last year for significantly reducing the size of two national monuments in Utah.

ICYMI: Environmental issues are certainly not left out of the wide-ranging implications of Kennedy's departure, as Pro's Alex Guillén and Annie Snider report. Kennedy for more than a decade has dictated by his votes which streams and wetlands should be protected under the Clean Water Act, and he cast the deciding vote that in 2007 opened the door to EPA climate regulations.

WELCOME TO THURSDAY! I'm your host, Kelsey Tamborrino. Bracewell's Frank Maisano

AMERICAN OVERSIGHT

knew President Richard Nixon was the first to see a triple play while attending a baseball game. It was a 1969 game between the Senators and Tigers, where the Tigers got the play, but still ended up losing 7-3. For today: Three current governors were born in Pennsylvania — more than any other state. Name them. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

Join Pro subscribers, expert reporters and key decision-makers from the executive branch, federal agencies and Congress for a full day of incisive policy conversations on July 17. New speakers include: Seema Verma, administrator of the Centers for Medicare & Medicaid Services; Scott Gottlieb, commissioner of the Food and Drug Administration; and others. Register today.

CROSS THAT BRIDGE FUEL: Industry leaders are trying to make one simple message clear at this week's World Gas Conference: They're nobody's transition fuel. As natural gas has been touted by some as a cleaner-than-coal bridge fuel to hold things over until renewable sources take over, gas executives this week argued that renewables can't keep up with growing energy demand, Pro's Eric Wolff reports . "Yes, renewable electricity will be grown massively, but it needs a partner," said Klaus Schäfer, CEO of German energy company Uniper SE. "Obviously gas need to become de-carbonized itself, gas needs to become green if it wants to be part of a de-carbonized future in Europe."

Others said the vast scale of the power grid would require a fuel like gas for decades, while highlighting how wind and solar can only provide less than 8 percent of the U.S. power supply. Still, executives said they see coal as their chief competition, not renewables. "Outside the developed world, the whole point is to get energy in increasing amount," said Laurent Vivier, president for gas for Total. "There is a choice that is very obvious to them: there is coal on the one side and gas on the other."

** **Presented by ExxonMobil:** Natural gas has become more important than ever. That's because it's fueling an American manufacturing revival and creating jobs while lowering emissions. And ExxonMobil is one of the world's largest providers. EnergyFactor.com **

HE'S BAAACK: Energy Secretary Rick Perry returns to Day Four of the conference for a discussion this afternoon on the role of gas in an integrated Americas. Ahead of his appearance, Perry will join Ray Washburne, president and CEO of the Overseas Private Investment Corporation, to announce a joint initiative for energy investment in the Americas. And when Perry takes the stage, he'll be joined by private-sector representatives and Javier Iguacel, the energy minister of Argentina, where Perry attended the G-20 earlier this month.

Perfect timing: DOE released an updated primer on Natural Gas Liquids on Wednesday, with a renewed focus on NGL's potential in the Appalachian region. The primer, updated with new data from EIA, includes a new section on R&D opportunities related to natural gas and NGL production, conversion and storage. Read it here.

What else? Alaska Sen. Lisa Murkowski will deliver keynote remarks at the conference this morning on "access to sustainable energy in developing economies." Ohio Rep. Bill Johnson will

AMERICAN OVERSIGHT

discuss the small- to mid-scale LNG movement.

ZINKE RESPONDS: Interior Secretary Ryan Zinke spoke out publicly for the first time Wednesday about a POLITICO report exposing a Montana real estate deal involving a nonprofit he launched and developers backed by Halliburton Chairman Dave Lesar. On talk radio program Voices of Montana, Zinke attacked the reports but did not dispute any specific details, as POLITICO's Ben Lefebvre notes . The secretary acknowledged meeting with Lesar and other developers in his Interior Department office, but said his involvement was limited to providing them background on the nonprofit and the land it owned, which had been donated by BNSF Railway years earlier.

NOT SO FAST: Senate Judiciary Chairman Chuck Grassley's first ever invocation of his chairmanship in response to EPA's Renewable Fuel Standard announcement on Tuesday didn't escape the notice of EPW Chairman John Barrasso. Though noting he didn't want to "get into a thing," Barrasso said, "in terms of the RFS, that's in the jurisdiction of EPW." He added, "I have a great deal of respect for Chairman Grassley. He knows the institution, the committees, jurisdiction probably better than anybody."

DIVIDED PANEL UPHOLDS MURRAY PUNISHMENT OVER BONUS PLANS: An evenly divided federal panel has effectively upheld a judgment against coal producer Murray Energy for a bonus program that an administrative law judge said undermined worker safety. The bonus plans offered miners up to $250 a shift if the crew met certain production quotas, but an ALJ at the Federal Mine Safety and Health Review Commission in 2016 said that motivated miners to avoid reporting safety violations or injuries. She fined Murray $150,000, even more than the Obama administration had asked for. The matter was appealed to the four sitting FMSHRC commissioners, with two saying the ALJ's decision should be upheld and two saying it should be reversed — creating a tie that in effect upheld the ALJ's decision. "We will immediately appeal this split decision and we will prevail," Murray said in a statement.

FIRSTENERGY LOOKING TO DUMP MURRAY CONTRACTS: FirstEnergy Solutions wants a bankruptcy judge to reject a contract the company has with the McElroy mine, owned by Murray Energy. The company has been trying to unload nuclear fuel and coal supply contracts throughout its bankruptcy, but Wednesday's filing was the first time it tried to get out of a Murray contract. The company says a January fire at its Bruce Mansfield coal plant has reduced its need for coal, and it wants out of $35 million worth contracts. Murray and FirstEnergy Corp. CEO Chuck Jones have both lead the charge for a federal bailout of coal and nuclear plants

MOVING AHEAD: Count Sen. Lamar Alexander, who oversees the Appropriations subpanel responsible for the energy and water spending title, in favor of moving ahead quickly with a conference between the House and Senate. "We'll move quickly as soon as the conferees are appointed," he told ME. "There's always issues, but we have a good history of working together." Alexander said he'd already had an informal chat with his House counterpart, Rep. Mike Simpson, and expected the House would name conferees later this week.

FOR YOUR RADAR: FERC Commissioner Neil Chatterjee will discuss "securing America's energy infrastructure" during a discussion at the Bipartisan Policy Center's conference today on

AMERICAN OVERSIGHT

the electric grid. Separately, Eric Lightner, director of DOE's Smart Grid Task Force, will participate in a discussion on "nourishing the research."

DEMOCRATS: BRING BACK THE ICR: Democrats are rallying around a return of an EPA information collection request in the aftermath of reports last week that oil and gas methane emissions are much greater than previously thought. A group of Democrats sent a letter to Pruitt on Wednesday calling on him to reinstate a formal ICR — which would require companies to report detailed technical information about methane emissions from their operations — after he withdrew the Final Methane ICR in March 2017. "With new science showing that emissions are likely considerably higher than previously thought, there is no excuse for delaying or rescinding methane emission controls, or for failing to collect data from methane emitters," the Democrats wrote.

MAIL CALL! CENTER'S REBUTTAL: The Center for Biological Diversity fired back at House Natural Resources Republicans, who last week questioned its relationship with the Japanese government. Defending its moves to protect the Okinawa dugong, an imperiled marine mammal, the center said it collaborated with U.S. and international partners but did not take direction from anyone but its board and executive director. "Neither its dugong campaign, nor any of its conservation work, is controlled in any manner by any other domestic or foreign interest. Nor does the Center formally represent the interest of any party other than itself and the species and places it seeks to protect," the Center's Kierán Suckling writes. If Republicans are "confused ... it is perhaps because they abuse their positions of power so regularly, and are so deeply influenced by powerful corporate donors, that they are unable to conceive of people being motivated by empathy, public interest and respect for the rule of law and democracy." Read the letter here.

ABOUT THAT 'RULE OF LAW': The top Democrats in the House and Senate overseeing the Clean Water Act are worried that Pruitt is not enforcing all violations of the 1972 law. The administrator has recently moved to consolidate key decisions with top political appointees, and last month an EPA staffer publicly acknowledged that the agency is dropping or slow-walking cases where Clean Water Act coverage is not a "slam dunk." In a letter to Pruitt yesterday, House Transportation ranking member Peter DeFazio and Senate Environment and Public Works Committee ranking member Tom Carper raised their concerns, arguing that the moves "call into question this administration's commitment to the rule of law," and asking for key details about enforcement actions currently underway.

REPORT: GHG EMISSIONS TO MISS PARIS TARGET: U.S. greenhouse gas emissions are estimated to drop 12 percent to 20 percent below 2005 levels by 2025 — far lower than the 26 percent to 28 percent that the Obama administration promised in the Paris agreement, according to a new assessment by Rhodium Group. The findings are based on current policies, although the outlook could change with state and local efforts and based on future elections, Rhodium noted. The power sector accounts for most emissions reductions.

Natural gas and renewable power will continue to displace coal, but they also will push nuclear plants into retirement after 2025, meaning there could be an emissions rebound. Transportation is the largest source of greenhouse gases, which could decline as electric vehicles

AMERICAN OVERSIGHT

become more affordable. But "there is little downward pressure on economy-wide emissions post-2025," Rhodium said. Forest and land use remain a "wild card" for U.S. emissions, the group added.

CEQ RELEASES NEUMAYR DISCLOSURE: The Council on Environmental Quality has released its updated financial disclosure for Mary Neumayr, the new nominee to run the White House Council on Environmental Quality. Her disclosure doesn't show any direct energy-related holdings. Neumayr, who has been acting head of CEQ for more than a year, previously his jobs on the Hill and in the Bush administration.

QUICK HITS

— "He lobbied for coal. Now he's In the Trump administration, and watching his words," Bloomberg.

Stories from POLITICO Pro

Anthony Kennedy retiring, giving Trump opening to reshape Supreme Court Back

By Josh Gerstein and Louis Nelson | 06/27/2018 02:06 PM EDT

Supreme Court Justice Anthony Kennedy announced on Wednesday that he will retire, unleashing an epic political battle to replace him that could allow President Donald Trump to shift the court to the right for a generation to come.

The departure of the 81-year-old Kennedy from his post after more than three decades has the potential to radically reshape the court on issues such as abortion, affirmative action and gay rights, where Kennedy has served as a swing vote.

"It has been the greatest honor and privilege to serve our nation in the federal judiciary for 43 years, 30 of those years on the Supreme Court," Kennedy said in a statement. He said that he wanted to spend more time with his family and that his decision would be effective July 31.

His exit is expected to create a furious fight in the Senate over his replacement, and it could thrust the often overlooked issue of judicial selection to the forefront in close Senate races in this year's midterms.

Trump told reporters Wednesday that Kennedy, whom he said has "been a great justice of the Supreme Court," had come to the White House earlier in the day to inform him of his retirement plans. Trump said he asked Kennedy for recommendations as to his replacement but did not say how the retiring justice responded.

The president pledged that his pick for Kennedy's successor would come from lists of potential nominees he already circulated, starting during the 2016 election, when he campaigned on a promise to fill the seat formerly held by Justice Antonin Scalia with another conservative judge. The replacement process will "begin immediately," Trump said, adding, "hopefully, we will pick someone who is just as outstanding."

Senate Majority Leader Mitch McConnell (R-Ky.) — who in 2016 refused to allow a vote on then-President Barack Obama's nominee to fill Scalia's seat, saying voters should get a say at the ballot box — said Wednesday that the Senate would vote this fall on Kennedy's replacement,

AMERICAN OVERSIGHT

before lawmakers elected in November's midterms are sworn in.

Senate Republicans lined up in support of filling Kennedy's seat quickly. Sen. Ben Sasse (R-Neb.), a frequent critic of the president who sits on the Senate Judiciary Committee, said in a statement that "the Senate ought to spend August and September confirming the next Justice."

Democrats, though, called McConnell a hypocrite for changing his stance from 2016. Sen. Chris Murphy (D-Conn.) called the majority leader's move "absolute hypocrisy," and Sens. Elizabeth Warren (D-Mass.), Kamala Harris (D-Calif.) and Ed Markey (D-Mass.) all expressed similar sentiments.

"Our Republican colleagues in the Senate should follow the rule they set in 2016, not to consider a Supreme Court justice in an election year," Senate Minority Leader Chuck Schumer (D-N.Y.) said on the Senate floor. "Anything but that would be the absolute height of hypocrisy."

Nominated to the court by President Ronald Reagan after the Senate rejected the more conservative Robert Bork, Kennedy grew to become the swing vote on the court, voting with its more liberal wing on landmark cases that upheld abortion rights and authoring the court's decisions in multiple cases on gay rights, including 2015's Obergefell v. Hodges, in which the court ruled that same-sex couples have the Constitutional right to marry.

He famously sided with the majority in *Planned Parenthood v. Casey*, a 1992 ruling that affirmed the constitutional right to abortion established in *Roe v. Wade*. Trump, like many conservatives, has voiced a desire to see *Roe* overturned.

But Kennedy has also swung key cases toward the conservatives as well, including notably in Citizens United v. FEC, a 5-4 decision in which the court ruled that government limits on political spending by individuals and organizations constituted a violation of the right to free speech. Of the 17 5-4 decisions handed down by the court in its most recent term, 14 were split along ideological lines, according to Mother Jones. In all 14, Kennedy sided with the court's conservative wing.

Still, Kennedy's retirement came as a blow to many Democrats, and cries of "Oh" and "Oh, my God" punctuated a call between members of the Democratic National Committee's rules and bylaws panel as the news broke Wednesday.

Abortion is likely to loom large in the debate over replacing Kennedy. With just a 51-49 GOP majority in the Senate, Republicans can afford to lose only one vote in a confirmation fight. Two Republican senators, Lisa Murkowski of Alaska and Susan Collins of Maine, are both supporters of abortion rights.

"Because President Trump will nominate the next Supreme Court Justice, a woman's constitutional right to access legal abortion is in dire, immediate danger—along with the fundamental rights of all Americans," said NARAL Pro-Choice America President Ilyse Hogue in a statement on Wednesday.

AMERICAN OVERSIGHT

Kennedy's decision, announced on the court's final day of releasing decisions for the current term, followed a quiet campaign by the Trump White House and its allies to convince Kennedy that it was a suitable time for him to retire and that his replacement would be an esteemed and reputable jurist.

Many court-watchers saw that motivation in Trump's selection last year of Neil Gorsuch, a former Kennedy clerk, to fill the vacancy created by Scalia's death in 2016.

At Trump's maiden speech to Congress last year, he took a moment to stop and chat with Kennedy. Kennedy's son Justin knows Donald Trump Jr. through work in New York real estate. Kennedy's other son, Gregory, worked briefly last year on the Trump transition team, handling financial issues related to NASA.

One Republican with knowledge of the White House's deliberations said two leading contenders to fill the vacancy were former Kennedy clerks Brett Kavanaugh, now a D.C. Circuit Court judge, and Raymond Kethledge, who sits on the U.S. Court of Appeals for the 6th Circuit.

White House legislative affairs director Marc Short said last month that Trump could consider nominating someone he has not yet named publicly if a vacancy arose. The president might pick someone seen as less stridently conservative for Kennedy's seat, since moderate Republican senators are likely to face pressure from the left not to confirm anyone viewed as too polarizing.

Other people mentioned as possible replacements for Kennedy include those who were interviewed by Trump for the seat Gorsuch eventually filled, 3rd Circuit Judge Thomas Hardiman, 11th Circuit Judge William Pryor and 6th Circuit Judge Amul Thapar.

Trump included on previous lists of potential Supreme Court nominees 7th Circuit Judge Amy Barrett, Supreme Court Justice Britt Grant, 11th Circuit Judge Kevin Newsom and Oklahoma Supreme Court Justice Patrick Wyrick. And conservative court-watchers have speculated that former George W. Bush solicitor General Paul Clement, who is the right's go-to litigator at the high court but was not on Trump's latest list, and Sen. Mike Lee of Utah could be candidates for the spot.

Sen. Ted Cruz (R-Texas), speaking Wednesday to Fox News, said he would like to see Lee be the nominee. Asked by a CBS News reporter if he would be interested in an appointment to the Supreme Court, Lee responded, "Of course."

David Siders, Matthew Nussbaum and Eliana Johnson contributed to this report.

Kennedy retirement tilts court right on climate, water Back

AMERICAN OVERSIGHT

By Annie Snider and Alex Guillén | 06/27/2018 04:08 PM EDT

Justice Anthony Kennedy's retirement will add the environment to the areas on which the Supreme Court will likely shift rightward at a time when major legal battles are wending their way to the justices.

For more than a decade, it has been Kennedy's sole view of which streams and wetlands should be protected under the country's foremost water law that reigned, shaping the cost of new housing developments, the location of coal mines and the health of the nation's waters.

And Kennedy cast the deciding vote in a landmark 2007 case that opened the door for EPA to regulate greenhouse gases. Both rules are among the most contentious actions of the Obama era that the Trump administration is working hard to undo or restrict.

Environmentalists, developers and farmers have been battling over the scope of the Clean Water Act since it was signed into law in 1972. In the turning point 2006 case *Rapanos v. United States,* the court's four conservative justices, led by the late Justice Antonin Scalia, took a limited view of which waterways should be federally protected, saying only that waterways that regularly flow into major rivers, and the wetlands directly next to them, should be covered. The court's liberal wing took an expansive interpretation, and Kennedy found himself in the middle.

Kennedy's stand-alone opinion in *Rapanos,* which argued that any creek, bog or marsh that has a "significant nexus" to downstream navigable waters warranted federal protection, has been broadly viewed by lower courts as the one to follow.

In 2008, the George W. Bush administration's EPA issued guidance hinged to Kennedy's "significant nexus" test, and when the Obama administration issued its 2015 Waters of the United States rule meant to clarify the reach of the 1972 law, it too was pegged to Kennedy's opinion. Expecting that challenges to the rule were likely to reach the Supreme Court, Obama's EPA used the phrase "significant nexus" more than 500 times in the Waters of the U.S. rule.

Even as court battles are raging in district courts over the legality of the Obama-era rule, the Trump administration has begun the process of repealing it and drafting its own, much narrower interpretation of the law pegged to Scalia's opinion. A draft of the proposal was sent to the White House for interagency review two weeks ago.

Legal experts generally considered the Trump administration's rewrite project to be a vanity project, likely to fall flat if it reached the Supreme Court for a review while Kennedy was still on the bench. Now, all bets are off.

Vermont Law School professor Patrick Parenteau said Kennedy was notable among the court's conservatives for the interest he took in learning about the science and complexity of the environmental problems before him.

"Nowhere was this more evident than in his concurring opinion in *Rapanos,* which has become the controlling test for evaluating what waters are protected under the [Clean Water Act],"

AMERICAN OVERSIGHT

Parenteau said by email. "His leaving will doubtless have a major bearing on the outcome of the litigation over the Waters of the U.S. rule."

With many environmental cases often narrowly splitting the court, Kennedy frequently played a key role in the blockbuster environmental cases of recent decades.

Most importantly, Kennedy cast the crucial fifth vote in *Massachusetts v. EPA*, the 2007 case that set the stage for the last decade of political battles over climate change.

He joined the court's four liberal justices to rule that the Clean Air Act gave EPA the authority to regulate greenhouse gases, including carbon dioxide. The Obama administration used that ruling to justify sweeping new rules on cars and later power plants that the Trump administration is now working to undo.

Kennedy, along with Chief Justice John Roberts, also sided with the court's liberal wing in 2014 to uphold EPA's Cross-State Air Pollution Rule, which a lower court had thrown out. The rule, which limits pollution that hurts air quality in downwind states, helped drive utilities to shutter a number of older, dirtier coal-fired power plants rather than pay for new pollution controls.

But Kennedy did not always side with environmental interests. In 2015, he and the four more conservative justices ruled that EPA had wrongly failed to consider the cost of regulating when first deciding to limit mercury emissions from coal plants. Although that ruling did not completely derail the mercury rule, it opened the door for an ongoing effort at EPA to change how costs and benefits are calculated, a move critics argue will make it easier to justify not regulating pollution.

Kennedy also cast the fifth vote in 2016 to block the Clean Power Plan before the D.C. Circuit had even reviewed it, an unprecedented step. Neither the court nor Kennedy ever explained the decision.

Looking forward, the Supreme Court has two environmental cases on its docket this fall, with potentially more on the way: The court has agreed to weigh when habitat can be designated as critical under the Endangered Species Act. The justices will also decide whether Virginia's 36-year-old uranium ban is pre-empted by federal law.

In addition, the Supreme Court will decide whether an American Indian-owned fuel business is exempt from the state of Washington's gas tax.

Gas industry: We're a destination fuel, not a transition Back

By Eric Wolff | 06/28/2018 05:00 AM EDT

AMERICAN OVERSIGHT

Gas industry officials at the World Gas Conference have a message for renewable energy advocates: We're not your transition fuel.

Natural gas has long been touted as an energy source that can displace coal around the world and serve as a bridge fuel until cleaner power systems that run on renewables like wind and solar can take over. But gas industry executives said renewables alone won't be able to meet global energy needs, and they'll need gas to run power plants when sunlight and wind aren't available.

"I like the expression of gas as a destination fuel and not a transition (fuel)," Patrick Pouyanné, CEO of Total S.A. told the conference this week.

Gas executives argued that renewables can't keep up with growing energy demand, and natural gas will be needed for decades to come. Even European Union countries that have agreed to sharp cuts in greenhouse gas emissions are hoping to build new pipelines and LNG terminals that will keep gas flowing in for several decades, a trend will require capturing and sequestering the carbon dioxide it produces.

"Yes, renewable electricity will be grown massively, but it needs a partner," said Klaus Schäfer, CEO of German energy company Uniper SE. "Obviously gas need to become decarbonized itself, gas needs become green if it wants to be part of a decarbonized future in Europe."

Other energy executives said the vast scale of the power grid would require a fuel like gas for decades. Even with their fast growth in recent years, wind and solar only provide less than 8 percent of the U.S. power supply.

"We have to get to a point of not talking about 100 percent renewables, it just cannot happen," Barry Perry, CEO of Fortis, a gas and power company with operations in the U.S. and Canada, told POLITICO. "When we talk about the big grid, you need that base generation to make it all work. ... We can do more renewables over time, but the grid is going to need some of the base generation for a very long time into the future."

Gas executives acknowledged that renewables will continue their fast growth, and they said gas turbines will provide critical ramping services on the power grid as well as keeping the lights on when the wind and solar can't. And with recent studies by the Energy Information Administration, the International Energy Agency, and others suggesting the world energy demand is likely to jump as developing nations electrify, gas will still be required.

"This is a challenge on a scale not faced before by humanity," De la Rey Venter, executive vice president for Shell's Integrated Gas Ventures, told an audience on Tuesday. "Renewable energy will play a major role in meeting this challenge. But renewables alone cannot transform the power sector. Today gas is ideal to handle to variability of the solar and wind."

Executives like Perry and Didier Holleaux, executive vice president for French utility Engie, said they doubted whether renewables could to handle the enormous projected energy demand needed as Asian countries expand their electricity networks and vehicles shrink their dependence on oil-

AMERICAN OVERSIGHT

based fuels. And despite some recent successes of renewables-plus-storage projects in the U.S., they don't believe batteries can compete with natural gas to supply the amount of energy that will be needed.

"In comparison batteries will always be an order of magnitude in cost — 1,000 times more expensive, today it's 2,000 times more expensive," Holleaux said. "Even if you think the cost will decrease, the cost of storing energy in gas is far cheaper."

Gas executives still see coal as their chief competition, not renewables.

"Outside the developed world, the whole point is to get energy in increasing amount," said Laurent Vivier, president for gas for Total. "There is a choice that is very obvious to them: there is coal on the one side and gas on the other."

"America has 100 years of gas of proven reserves, Canada has 200 years," he added. "It's an amazingly abundant resource, it is a foundational fuel, not a transitional fuel."

Exclusive: Zinke linked to real estate deal with Halliburton chairman Back

By Ben Lefebvre and Nick Juliano | 06/19/2018 05:05 AM EDT

WHITEFISH, Mont. — A foundation established by Interior Secretary Ryan Zinke and headed by his wife is playing a key role in a real-estate deal backed by the chairman of Halliburton, the oil-services giant that stands to benefit from any of the Interior Department's decisions to open public lands for oil exploration or change standards for drilling.

A group funded by David Lesar, the Halliburton chairman, is planning a large commercial development on a former industrial site near the center of the Zinkes' hometown of Whitefish, a resort area that has grown increasingly popular with wealthy tourists. The development would include a hotel and retail shops. There also would be a microbrewery — a business first proposed in 2012 by Ryan Zinke and for which he lobbied town officials for half a decade.

The Whitefish city planner, David Taylor, said in an interview that the project's developer suggested to him that the microbrewery would be set aside for Ryan and Lola Zinke to own and operate, though the developer told POLITICO that no final decisions have been made.

Meanwhile, a foundation created by Ryan Zinke is providing crucial assistance. Lola Zinke pledged in writing to allow the Lesar-backed developer to build a parking lot for the project on land that was donated to the foundation to create a Veterans Peace Park for citizens of Whitefish. The 14-acre plot, which has not been significantly developed as a park, is still owned by the foundation. Lola Zinke is its president, a role her husband gave up when he became interior

AMERICAN OVERSIGHT

secretary.

The Zinkes stand to benefit from the project in another way: They own land on the other side of the development, and have long sparred with neighbors about their various plans for it. If the new hotel, retail stores and microbrewery go through, real estate agents say, the Zinke-owned land next door would stand to increase substantially in value.

Lesar, who also served as Halliburton's chief executive until last year, is providing money to back the hotel and retail development, according to business records and officials at Whitefish city government and Halliburton. He also has a longstanding relationship with the Zinkes. In 2014, he and his wife, Sheryl, gave $10,400, the maximum allowed by law, to Zinke's first House campaign. His only other federal contributions that year were to Halliburton's PAC and the campaign of Rep. Liz Cheney, whose father, Dick, ran the company before becoming George W. Bush's vice president.

Ryan Zinke did not respond to a list of specific questions but said in a statement that he "resigned as president and board member" of the foundation "upon becoming secretary."

The foundation's 2018 annual report to the state of Montana, however, lists Ryan Zinke as an officer, with Lola Zinke as president and their daughter as treasurer. Zinke said the report was in error and he would seek to amend it.

In his statement, Zinke declared: "The mission remains to provide a children's sledding park and community open space in a setting that recognizes the contributions of the railroad and the veterans to the community. ... The subject LLC you mention has been in contact with Lola with the intent of expanding their parking requirements on park property. I understand a concept was provided but no formal proposal or documents have been submitted or agreed upon. I also understand by reading the paper is their proposal is supported by the City Council."

He did not respond to questions about the microbrewery, the involvement of Lesar or Lesar's status as chairman of Halliburton.

Lola Zinke did not respond to questions left on her Facebook page or messages left at the family's Montana home. Neither Jennifer Detlefsen, the Zinkes' daughter and the foundation's treasurer, nor the foundation's law firm of Frampton Purdy Law, responded to questions.

In Whitefish, the plan to use land that was donated to the Zinkes' foundation as a public park to further a private development strikes residents as a surprise.

"I've never been clear exactly what his intentions are for the place," said Steve Thompson, who lives near the park and supported Zinke early in his career but has since grown disillusioned with him. He described the current state of the land as "sort of a big puddle, a mudhole puddle."

The involvement of the interior secretary's family in a multimillion-dollar project funded by the chairman of an energy-services giant — revealed here for the first time — is rife with conflicts of interest, ethics experts say, especially since Zinke's job as interior secretary makes him the

AMERICAN OVERSIGHT

custodian of more than 500 million acres of public land and head of a department that sets technical and safety standards for pipelines and drilling.

Halliburton is the largest American oil-services company, drilling wells and building rigs. It stands to benefit from any new oil and gas exploration on public land or offshore — something the Trump administration has promised to promote — and the company has frequent dealings with the Interior Department in its regulatory capacity.

For example, federal disclosures show that Halliburton's in-house lobbyist met repeatedly with Interior officials to discuss the department's policies on hydraulic fracturing, the oil extraction procedure that some studies have linked to groundwater contamination and earthquakes. Under Zinke, the department last year rescinded Obama-era rules that restricted fracking on federal land, a decision that directly benefited Halliburton, one of the world's leading fracking companies.

Marilyn Glynn, who was acting director of the Office of Government Ethics under former President George W. Bush, said the foundation's involvement in a deal backed by the chairman of Halliburton is clearly inappropriate and, at minimum, should force Zinke to recuse himself from any policy decisions affecting Halliburton.

"That Halliburton's chairman would almost be a business partner of Zinke or his wife, he would have to recuse himself from anything involving Halliburton," said Glynn, adding that the relationship clearly crosses ethical lines.

She suggested the Trump administration should set a higher ethical standard.

"In a previous administration, whether Bush or Obama, you'd never run across something like this," she said. "Nobody would be engaging in business deals" with executives whose companies they regulate.

Amy Myers Jaffe, a longtime energy analyst now working at the Council on Foreign Relations, said the Interior Department, in setting specifications for rig equipment and how much methane can leak from pipelines, has the power to make Halliburton's business more or less profitable.

"They spend a tremendous amount on R&D to comply" with government regulations, Jaffe said of oil-service companies. "You wouldn't want Interior to change specifications and make that equipment no longer commercially viable."

She added that Zinke's conflicts could extend to investigations of accidents involving Halliburton's equipment.

"One thing that is most concerning is if Interior would be called upon to investigate the procedures of a service company offshore" in case of an accident, said Jaffe. "A tight relationship [between the interior secretary and the company] would be problematic."

Executive branch officials such as Zinke are subject to conflict-of-interest rules requiring that

AMERICAN OVERSIGHT

they recuse themselves from government decisions involving people with whom they or their close relatives have a financial relationship.

Craig Holman, a specialist in federal ethics laws for the advocacy group Public Citizen, said Lola Zinke's efforts to help the development backed by Lesar would amount to a financial relationship.

"Entering this type of business relationship could very clearly open the doors [of government] to business interests that have stakes before the office holder," Holman said. "Clearly, any substantial development project next to the vacant lot owned by Zinke's foundation would significantly boost the value of the lot. The conflict-of-interest statute would be invoked if even the nonprofit on which Zinke or his spouse serves as an officer, as either paid or unpaid officers, derives a financial benefit."

***

After 23 years as a Navy SEAL, Ryan Zinke retired from the military in 2008 and returned to Whitefish, the mountain city of roughly 6,000 people where he grew up and where his father and grandfather ran a plumbing business.

It was, however, a changed community, increasingly popular with tourists and second homeowners for its pristine isolation and proximity to Glacier National Park.

A city that began as a stopping place for freight trains carrying lumber from the state's thriving timber industry was fast becoming an upscale resort. In 2009, the year after Zinke's retirement, about 17 percent of households were making more than $100,000 a year, according to the U.S. Census Bureau. By 2016, 23 percent of Whitefish households were making that much, adjusted for inflation.

Whitefish is a particular magnet for California tech entrepreneurs and oil barons from Canada and Texas who have built homes valued at more than $1 million each. Lesar is one of them. He currently has a home behind a gate on a private road looping up one of the nearby mountains.

As the then 46-year-old Zinke planned his future, he began laying the groundwork for business and political careers more or less simultaneously, and sometimes on parallel tracks. Launching a nonprofit foundation to build a park in Whitefish was one of the first things he did to reintroduce himself to the community, which helped bolster his credentials for office.

The foundation's first big donation was from BNSF Railway, the nation's largest freight railroad, with more than 32,500 miles of track. The railway is one of the state's biggest landowners, with extensive business before the state government.

Zinke proudly announced that the donated land would be used for what he dubbed "the Great Northern Veterans Peace Park." In announcing the gift, he touted his own career in uniform and described the park as a gift to Whitefish. His intent was to combine the railway land and an adjacent city-owned hill into "a children's winter sledding park in a setting that recognizes the

AMERICAN OVERSIGHT

contributions of the veterans and the railroad to the local community," according to the nonprofit's publicly available IRS forms.

"The theme of this park is to celebrate life — why veterans fight," Zinke told a local newspaper in February 2008.

That same year, he filed paperwork to run for the state Senate.

He won the race and, shortly after taking office, cast the deciding committee vote on a bill that strongly benefited BNSF. The bill would have pumped millions of taxpayer dollars into railroad construction through a publicly funded Montana Rail Authority.

Jeff Mangan, Montana's commissioner of political practices, said the vote, coming so soon after Zinke accepted a donation of land from the railway, would have violated the Legislature's code of conduct if he did not disclose the relationship. "If there's an appearance of conflict of interest, they have a duty to disclose that conflict before a vote," Mangan said. But enforcement of that requirement can be "fairly laid back," he said.

There is no record of Zinke making a formal disclosure of his relationship with BNSF before the vote, and Zinke did not respond to questions on the matter.

Ultimately, then-Gov. Brian Schweitzer vetoed the legislation for the Montana Rail Authority, saying he was concerned "that public money will be targeted to build infrastructure that should be rightly financed by the private sector."

BNSF continued to donate more land to the Veterans Peace Park with adjoining parcels being given to Zinke's foundation in 2010 and 2013.

BNSF spokesman Ross Lane said in an interview, "We would firmly reject that there is any quid pro quo on the donations" for the Veterans Peace Park.

The land remains mostly in a natural state, and is only lightly utilized, except when local children use it for sledding, as they had before Zinke's foundation acquired the land. On a recent spring day, the only inhabitants were a pair of Bufflehead ducks sharing a retaining pond that dominates the property with a discarded inner tube.

Nonetheless, even in an undeveloped state, the land is now valued at more than $500,000, according to the group's 2016 tax returns, the most recent publicly available. The tax returns also show monetary gifts to the foundation, which increased as Zinke's political career advanced.

In 2012, when Zinke launched an unsuccessful bid for lieutenant governor, the foundation took in $30,000, according to tax records. In 2014, when Zinke ran for the House, the foundation again received $30,000 in contributions and saw its cash holdings grow from $118 to $23,743 over the course of the year. The foundation raised $36,000 in 2015, before seeing its contributions fall to $5,000 the following year, the last before he became interior secretary.

AMERICAN OVERSIGHT

The Zinkes reported that they gave the foundation $10,000 in 2012, but the source of the rest of the contributions is undisclosed. That lack of transparency is a common concern when politicians control their own charities, said Melanie Sloan, a senior adviser at government ethics watchdog group American Oversight.

"The main concern is it's another way for donors and corporations to curry favor with politicians," Sloan said. "If he's doing something to benefit those making donations, it's invisible to us. It undermines the whole interest of transparency."

Even as the park continued to lie fallow, Ryan and Lola Zinke turned their attention to pieces of land that they own through various LLCs. In December 2012, while Ryan was preparing to leave the state Senate, the Zinkes announced that they wanted to turn his childhood home into a B&B called the Snowfrog Inn, and also to build a microbrewery on their development land across the street. They planned to call the brewery "Double Tap," which is a Navy SEAL term for two gunshots.

Both proposals required public approvals, which put Zinke — one of the state's rising political stars — in a position of arguing before local politicians. He was steadfast in calling for more commercial development in the face of neighbors' complaints about traffic and noise.

The City Council appointed Zinke to a special steering committee of local residents to explore ways to develop the area where the Zinkes' land was located. The committee included 13 residents of Whitefish, just two of whom lived in the neighborhood, Zinke and one other.

The committee recommended opening the area for greater commercial development. The City Council and mayor endorsed the plan.

While the larger planning process was playing out, Zinke won approval in 2013 for the B&B without a microbrewery across the street, as he had initially proposed. The Snowfrog Inn website states that it is still under construction.

By 2015, Zinke was back before the City Council, this time in his first term as Montana's sole representative in the U.S. House, arguing passionately for the committee plan to expand development, according to a video of the meeting. He cited his microbrewery proposal as the impetus for the changes to the planning process.

"In regards to a brewery, I've asked for a brewery because that's what started this whole process," Zinke declared at a contentious May 4, 2015, council meeting, referring to the changes to the city's planning rules that he had helped orchestrate.

Neighborhood activists continued to raise objections, insisting that Zinke had done little in the 29 months since announcing his microbrewery proposal to assuage their concerns about noise and traffic. But Zinke told them they were outnumbered.

"The same people are going to be against it tomorrow as was at the beginning, but most of the strong majority of the steering committee, which represented every bit of the neighborhoods ...

AMERICAN OVERSIGHT

all came to the same conclusion, that this [planning change] should stand," Zinke said, according to a video of the meeting.

The changes to the planning process did not lead to approval of the microbrewery on the Zinkes' own development parcel, but they opened the doors to a new proposal for a multiuse development on a much larger plot — a former timber-company lot — between the Zinkes' land and the veterans' peace park that they controlled.

The project, known as 95 Karrow, named for the avenue on which the land sits, was launched in September of last year. Two days after the partnership backing the development was established, Lola Zinke, in her capacity as president of the foundation controlling the peace park, signed an official letter of intent to allow the construction of a parking lot for customers of the microbrewery and other businesses on the parkland, which the developers included in their proposal. The letter said the specific terms of the agreement would be worked out by the parties.

Taylor, the Whitefish city planner, told POLITICO that the developers "certainly implied that they were working with [Zinke] to find a place for his microbrewery as well as a shared use agreement for parking on the peace park."

At least two project maps submitted to the city mark off space specifically for a microbrewery adjacent to the parking lot. The letter Lola Zinke signed and submitted to Whitefish City Council states "it is the intent of the GNVPP Foundation to concur with the general design of the parking, micro-brewery, multiple use path, fence and other supporting elements" of the redevelopment project. Attached to that letter is a map with a handwritten notation indicating a "border adjustment" that would appear to carve out the microbrewery site from the rest of the property.

The parking lot is also meant to serve the park if the foundation ever does anything with the rest of the 14-acre parcel it owns.

The developers of the hotel, microbrewery and retail shops are a partnership known as 95 Karrow LLC, which itself is controlled by two individuals and three other entities, according to business registration records filed with Montana's secretary of state. The two individuals are John and Katie Lesar, who are the son and daughter-in-law of Halliburton's chairman, according to a biography his wife, Sheryl, wrote for a local nonprofit, where she serves as a board member.

Two of the other entities, BADF LLC and KCM Enterprises Inc., are linked to Bruce Boody, a local architect who worked with the Zinkes on their B&B proposal, and a local developer named Casey Malmquist, according to Montana business records. The third, Greenstream Resources LLC, lists a Texas address but does not disclose any owners in records filed there. However, the P.O. Box it uses matches the address of another business, First Floor Properties LLC, that lists David Lesar as its "general partner" and other family members among its management.

Both Malmquist and a Halliburton official confirmed that David Lesar is a member of the Greenstream Resources LLC, which is expected to provide a significant portion of the financing for the 95 Karrow project.

AMERICAN OVERSIGHT

Halliburton spokeswoman Emily Mir said the company had no comment on Lesar's involvement in the project, calling it a private investment that Lesar was making outside his role in the company.

Malmquist, who is leading the development project, said that talk of Zinke owning a brewery on the site was premature, as no final decisions have been made on what type of businesses the redevelopment will contain.

"If and when we get to that point, Ryan Zinke, or anyone else that is interested, can purchase a parcel of property, properly located on the development by use and per zoning, and develop a project that is permitted from the standpoint of zoning designations that determine the permitted uses on the development parcel, as well as following the [covenants, conditions, and restrictions] that are yet to be developed for the property," Malmquist said in an email.

***

The Zinkes' mixing of their nonprofit role as stewards of the Great Northern Veterans Peace Park Foundation with their role as landowner and developer echoes other ethical concerns raised about the couple.

In 2012, Ryan Zinke formed a super PAC called Special Operations for America, through which he raised money from donors to attack then-President Barack Obama's reelection campaign for taking credit for the death of Osama bin Laden. Over the following year, the group paid nearly $40,000 to an LLC established by Ryan and Lola Zinke called Continental Divide International for "strategy consulting" and "fundraising consulting" and to reimburse travel expenses.

Only $7,000 of the more than $180,000 the group raised in 2012 went to efforts to influence the election, according to the group's FEC filings.

The super PAC was Zinke's foray into a world of political fundraising that would carry through to his time in the Trump administration. Less than a month after being sworn in as interior secretary, he appeared at a fundraiser in the Virgin Islands for another PAC that has been criticized for spending vastly more on administrative expenses than on campaign activities.

The Virgin Islands GOP PAC has raised $5.7 million since its inception in February 2015. It has spent $76,000 — just 1.3 percent — on congressional candidates, including $3,500 to Zinke's campaign and SEAL PAC, a subsequent group he launched after his election to the House.

Meanwhile, two of Zinke's top aides at Interior, chief of staff Scott Homell and counselor Vincent DeVito, were previously on the payrolls of Special Operations for America and SEAL PAC, respectively.

Earlier this year, the Interior Department's internal watchdog criticized Zinke for obscuring his personal interest in some ostensibly official duties — an incident that involved another Whitefish resident, Fidelity National Financial Chairman Bill Foley, who was one of Zinke's biggest political donors.

AMERICAN OVERSIGHT

Zinke charged taxpayers more than $12,000 last June for a late-night charter flight from Las Vegas, where he had spoken to a National Hockey League team Foley owns, to Whitefish for meetings at the Western Governors Association that were being held there the following day.

Speaking to the Las Vegas Golden Knights was a favor to a friend and donor. He "first mentioned during his initial ethics briefing in March 2017 that he wanted to speak to a friend's hockey team," according to a report from the IG. He did not mention any specific aspects of his job as interior secretary during the speech, which focused on his time as a Navy SEAL. After Zinke and his staff made plans for the speech, the Interior Department started to schedule an event for him to announce Payment In Lieu of Taxation grants, routine business that is typically handled with a news release.

The IG's investigation found that the charter flight could have been avoided with better scheduling, and that Zinke's prior relationship with Foley should have been disclosed in advance to ethics officials who had reviewed the trip.

Foley, a West Point graduate who grew up in the Texas panhandle, has been a major presence in Whitefish since buying a home there in 2005. That same year, he purchased a majority share in Winter Sports, the company that runs the Whitefish Mountain Resort in the town. He soon bought Glacier Jet Center, a private airport about 20 minutes outside the city.

Foley's development projects, like David Lesar's and the Zinkes', are signs of just how far Whitefish has come since Zinke's childhood. The Pastime Pool Hall and Bar, which Zinke fondly remembered in his autobiography as where his grandfather used to socialize, has been renamed "The Bulldog," although not much else about it has changed. But the city also boasts a crepiere, an artisanal olive oil shop and a camping store that sells "overnight yurts." A new yoga studio stands about a minute's walk down the block from Zinke's boyhood home.

"It's gone from a dirty ski town to pretty bougie," said Cale Knox, a Whitefish native and employee at the Red Caboose coffee shop downtown. In a sign of the times, tech venture capitalist Michael Goguen recently bought the Red Caboose, and there is rumor that it will become a wine bar.

Only a mile away is the open land that Zinke dubbed his Veterans Peace Park. Ten years after the railroad donated the first piece of land, locals are as flummoxed as ever about what will happen to it. The situation has left some residents worried that what was pitched as an attempt to provide a green space dedicated to children and veterans was instead used to build Zinke's political profile.

"It was something to put on his résumé," Whitefish City Council member Richard Hildner said of the park during a visit there. "Now, it just sits here."

Zinke seeks to explain meeting with Halliburton chairman Back

By Ben Lefebvre | 06/27/2018 04:40 PM EDT

Interior Secretary Ryan Zinke sought Wednesday to explain his role in a real estate deal involving a nonprofit he launched and developers backed by the chairman of Halliburton, a major energy company with extensive business before his department.

In his first public comments on the deal since it was first reported by POLITICO last week, Zinke acknowledged meeting with Halliburton Chairman Dave Lesar and other developers in his Interior Department office, but said his involvement was limited to providing them background on the nonprofit and the land it owned, which had been donated by BNSF Railway years earlier. The developers all live in or near Whitefish, Mont., the secretary's hometown where the development would be built.

"And then Dave Lesar and his son, who is developing a piece of property next door, they don't understand, when they had the property, actually, the Veterans Peace Park owns the lot next door. So they come and say, 'Hey, what's the background?'" Zinke said on Voices of Montana, a talk radio program broadcast throughout the state, referring to the August 2017 meeting. He added, "We go out to dinner. We talk about the background of the park. What are the neighbors like. What was the vision of the park. Where the boundaries are. Where the water table is, because the water table has changed over time. What the railroad is. So they have the background."

About a month after that meeting, Lola Zinke, the secretary's wife and now president of the foundation, signed a letter of intent to allow the developers to build a parking lot on its land in Whitefish, a move that could increase property values for parcels the Zinkes own nearby and that a city planner said could result in Zinke running a microbrewery on the site. Zinke did not address the microbrewery or his other real estate holdings in Whitefish on the radio program Wednesday.

House Democrats are calling for Interior's inspector general to investigate whether the deal may have violated conflict of interest rules. Zinke's role at Interior places him as one of the chief regulators overseeing oil and gas drilling activities, including those performed by Halliburton, one of the world's largest fracking and offshore drilling services companies. The inspector general's office is looking into the lawmakers' request before determining whether to launch a full investigation, a spokesperson for the internal watchdog told POLITICO Wednesday.

Zinke launched the Great Northern Veterans Peace Park Foundation after receiving his first donation of railroad land from BNSF in 2008. The land remains largely undeveloped, but Zinke told the Montana radio host Wednesday that his foundation has "added 27,000 tons of material. We've redone roads. We groom it."

In the interview, Zinke said he resigned from the park foundation board after joining Interior. He

AMERICAN OVERSIGHT

told POLITICO earlier that he had no involvement in the park's business, though one of the developers in question, Casey Malmquist, said he visited Zinke in Washington, D.C., in August to discuss the development plans. Malmquist also emailed project development maps to Zinke, according to Interior emails.

Zinke attacked reports on the project without disputing any particular details.

"Clearly, I'm not on the board anymore. My wife runs the board. And they make a letter of intent for my wife that, you know what, the community is for this project, the city approves it, it's a good project for Whitefish, we'll share some parking lots with you. That's it. And this nefarious reporter comes to Whitefish — my hometown — lies to the city on record, lies to the developer on record, takes pictures of an inner tube in the park, and promulgates this story that somehow it's about Interior and Halliburton. This is exactly what's wrong with the press, and the president has it right. It's fake news. It's knowing, it's willing, to willingly promulgate fake news."

An Interior spokesperson did not immediately reply to questions. Interior spokeswoman Heather Swift has said in the past that the matter was not a department issue.

POLITICO stands by its reporting.

EPA pulls methane information request Back

By Alex Guillén | 03/02/2017 04:36 PM EDT

EPA says more than 15,000 oil and gas companies no longer have to report detailed technical information about methane emissions from their operations.

The move was announced via a Federal Register notice that will be published on March 7 but will take immediate effect.

It is the agency's first step away from an Obama-era plan to regulate methane emissions from existing oil and gas operations. EPA in November directed oil and gas operators to respond to an "information collection request" on the topic that the agency estimated would cost companies, which are required by law to respond, about $42 million in total.

"By taking this step, EPA is signaling that we take these concerns seriously and are committed to strengthening our partnership with the states," EPA Administrator Scott Pruitt said in a release. "Today's action will reduce burdens on businesses while we take a closer look at the need for additional information from this industry."

EPA also noted it received a letter on Wednesday from eleven state attorneys general or

AMERICAN OVERSIGHT

governors, including new Oklahoma Attorney General Mike Hunter, asking EPA to drop the "onerous" request.

Subject: Morning Energy: Pruitt steps up to the plate — Tester's 'great equalizer' — Bishop still talking NEPA

By Kelsey Tamborrino | 04/26/2018 05:42 AM EDT

With help from Anthony Adragna

PRUITT STEPS UP TO THE PLATE: Scott Pruitt makes his eagerly anticipated trip to the Hill this morning, and the stakes couldn't be higher for the embattled EPA administrator. His appearances before the House E&C Committee in the morning and Appropriations panel in the afternoon — ostensibly to defend the Trump administration's proposed cuts to EPA's budget — will give lawmakers their first opportunity to directly question Pruitt since the news broke about his heavy spending, sweetheart condo rental, VIP security and first-class flights. And while both Democrats and Republicans are expected to pull no punches as they weigh Pruitt's behavior, the real audience will be sitting in 1600 Pennsylvania Ave.

Check out this graphic breakdown of Pruitt's problems by POLITICO's Emily Holden, Alex Guillén and your ME host.

— **The administrator has kept a low profile** in the lead-up to today's events — even leaving press out of a Tuesday announcement on his plan to ban secret science — but expect the cameras to be out in force this morning. ME breaks down what to expect today as Pruitt heads for the batter's box. (ME is also taking suggestions for an appropriate walk-up song. One option here.)

THE GAME PLAN: Pruitt will point out he now flies coach when he travels, and shift the blame to staffers for the raises given to two of his close aides, according to a talking points document — dubbed "hot topics" — obtained by The New York Times. He will likely also say officials who were reassigned or demoted after challenging his spending all had performance issues.

— **EPA did not dispute the authenticity** of the Times document, but spokesman Jahan Wilcox said Pruitt would tout "the accomplishments of President Trump's EPA," including "working to repeal Obama's Clean Power Plan and Waters of the United States, providing regulatory certainty, and declaring a war on lead — all while returning to Reagan-era staffing levels." You can read Pruitt's full opening statement for the E&C hearing here.

DEMOCRATS WILL SEARCH FOR ANSWERS: The afternoon session is expected to dive into Pruitt's proposed deep cuts to the agency's budget and his deregulatory actions, but that doesn't mean Democrats will ignore the ethics woes dogging the embattled chief. "Administrator Pruitt, you are letting the American people and your agency down," Rep. Betty McCollum, ranking member of the Appropriations subpanel, plans to say. Democrat Nita Lowey , the ranking House appropriator, will question Pruitt on the Antideficiency Act after the Government Accountability Office found EPA illegally failed to notify Congress about the cost of his secure phone booth. Meanwhile, E&C's top Democrat Frank Pallone wouldn't tip his hand: "I just hope

AMERICAN OVERSIGHT

he shows up," he said when ME asked for his plan of attack.

— **House Energy and Commerce Democrats** will hold a news conference at 9 a.m. to once again call for Pruitt's ouster. Kathy Castor and Paul Tonko will attend, alongside representatives from numerous green groups.

REPUBLICANS OFFER SOME ADVICE: "Answer the questions and stay calm," John Shimkus said. "And the time will eventually end." The Illinois Republican didn't let on about his line of questions to Pruitt, but added: "It's not going to all be addressing stewardship issues. There are going to be policy questions."

— **Fellow Oklahoman and member of the Approps committee** Tom Cole expects the "highly charged" hearing to contain some "pretty much straight budget questions" — at least from the Republican side. Cole said he recently spoke to Pruitt on the upcoming hearing and warned him it would be "rugged."

Keep in mind: None of the committee Republicans said they'd been in contact with the White House ahead of the session. Shimkus said the Republicans hadn't huddled ahead of time to develop a game plan as they sometimes do with high-profile hearings. And Democrats are expected to turn out in force — E&C members not on the Environment subpanel will "waive in" to the hearing. They don't need GOP permission to do so, but will have to wait until all subcommittee members participate before asking questions. ME would look here for especially fiery questions or any surprises.
